GREAT REDUCTION IN PRICES.

Now is the time to purchase when you can get your goods at wholesale prices. That is what we have decided to do with the balance of all Summer Dry Goods, including Crum's celebrated English Prints, in a great variety of patterns, Zephyrs, Ginghams, Piques, Duckings, Muslins, Chambras and all Summer Dress Goods. We have a few nice Dress Patterns left yet. Ask to see our 7c and 10c Muslins—they are plums.

Also in Gents' Summer Furnishings, in Suits, Light Coats, Shirts and Underwear, in Boots and Shoes, we have a complete stock and are offering some excellent values, especially in Mining Shoes. As space will not allow us to quote you prices, we ask you to call and see for yourself. Remember, everything sold at the reduced prices will be cash, if charged, at regular prices.

MINING IN BOUNDARY CREEK DISTRICT.

Valuable Information Relative to the Mining Industry Contained in the First Annual Report of the Greenwood Board of Trade, Prepared by Mr. R. E. Gosnell.

Although the first annual report of the Greenwood Board of Trade has not yet been formally adopted by the Board the portion of it that relates to the mining industry in the district has found its way into print. The valuable information contained in this part of the report was, at the request of the late secretary, Mr. R. E. Gosnell, supplied by Mr. E. Jacobs, who spent a week in visiting the mines and obtaining data so as to ensure accuracy. The descriptive matter is, in the main, as written by Mr. Jacobs, who also compiled all the statistics given below except those of capital invested, which are Mr. Gosnell's estimates. The mining portion of the report runs as under:

A MINING REVIEW.

"In reviewing the prospects and condition of the mining industry of the Boundary Creek district it is necessary to direct attention to several facts tending to show that a comparison with older and better developed mining districts would not be fair to the former unless due allowance were made for the attendant circumstances unfavorable to it. The lack of railway transportation facilities has heretofore involved heavy and almost prohibitory freight charges on machinery, plant, materials and mine stores. Power plants in use at its mines are comparatively small capacity and development work has necessarily been slow, the more so since the data necessary for the advantageous working of the mines can not be so speedily obtained where big bodies of generally low grade ore have to be opened up. Then whilst the branch railway lines to several of the principal mines have lately been completed, the smelter at Greenwood is still only under construction and that at Grand Forks is just about to be blown in. Further, the district has not yet, except in two or three instances, had the benefit of the expenditure of any considerable amount of outside capital. So it has resulted that, with only a limited amount of capital available, actual mining operations have been much restricted, whilst the absence of suitable transportation and smelting facilities has greatly retarded progress. The prospects for early improvement are, however, encouraging. With transportation and ore reduction needs largely provided for; several of the mines settling down upon a producing basis and so encouraging the further expenditure of capital for their adequate equipment and more extensive operation; the contemplated early resumption of work on properties that have been closed down and the general local experience that values improve with depth, the outlook is becoming increasingly satisfactory.

DEADWOOD CAMP.

Within a radius of about eight miles of Greenwood there are a dozen mining camps, in each of which numerous mineral claims have been located. Of these camps there are five that, as a result of the comparatively large amount of development work done in them, have come into particular prominence. These are Deadwood, Greenwood (also known as Phoenix), Summit, Wellington and Central (or White's) camps. Taking them in the order named, Deadwood claims first notice. Its principal mines are the Mother Lode, Sunset, Morrison and Buckhorn, all copper-gold properties. Among numerous other claims are the Ah There, Greyhound, Great Hopes, Marguerite, the D. A. and Gold Bug. The last named two have narrow veins of ore rich in gold and silver. The following is a summary of the chief development work done in this camp:

	Sinking, Raising,	Driving, Crosscut'g.	Total feet.
Mother Lode	730	2965	3695
Sunset & Crown S'r	306	1700	2006
Morrison	200	800	1000
Buckhorn	327	510	837
Ah There & Greyh'd	80	45	125
Greyhound	60	25	85
Great Hopes	75	95	170
Marguerite	111	68	179
D. A. and Gold Bug	320	454	774
	2209	6662	8871

There are six steam power plants in Deadwood camp. The Mother Lode has two 60 horse power boilers, one large and two small hoisting engines, a straight line air compressor, five machine drills, steam pump, electric light plant, safety cage and other mine equipment. Preparation is now being made to instal at this mine a much larger plant, including two 100 horse power boilers, a Corliss air compressor of 30 to 40 drills capacity, two iron safety platform cages and all requisite accessories. The Sunset plant includes two 80 horse power boilers, half of a 20 drill duplex air compressor, ten machine drills, one large and one small hoisting engine, safety cage. The Buckhorn has an 80 horse power boiler, half of a 10-drill duplex air compressor, 20 horse power hoisting engine, etc. The three remaining plants are smaller. The deepest shaft in the camp is that on the Mother Lode, depth 325 feet. The ore bodies appear to be large. The Mother Lode ore body was crosscut in three places at the 200 foot level, showing about 90 feet of good ore. Large veins of ore have also been cut on the Morrison and the Sunset. There are about 120 men employed in the camp, to which a branch of the C. P. R. has been extended.

As in many of the other camps, the ore here is principally chalcopyrite, carrying gold and silver values, although a few of the well known properties show but little copper, and consist of nearly all iron pyrites, carrying good gold values. Some of the ore bodies are of large extent and high assay value. This will undoubtedly become one of the great copper-gold camps of British Columbia.

GREENWOOD OR PHOENIX CAMP.

Greenwood camp has had more development work done on it to date than any other camp in the district. Its principal properties are the Miner-Graves group, including the Old Ironsides, Knob Hill, Victoria and the Grey Eagle; the Dominion Copper Company's group, the most important claims of which are the Brooklyn, Stemwinder, Idaho and Rawhide; and the Snowshoe, Gold Drop and War Eagle, each owned by a separate company. Other promising claims in this camp are too numerous to detail here. Greenwood camp is noted for its big deposits, which may, without exaggeration, be described as enormous—of copper-gold ore. Values do not yet as a rule run high, the average value, for instance, of more than a million tons of ore blocked out in the Knob Hill having been placed by the mining superintendent at $8.37 per ton. In nearly all cases with any depth the ore shows a general sameness of appearance, i. e., chalcopyrite with hematite (mieaceous iron), and some iron pyrites mixed with calcite and some quartz in a greenish, eruptive rock, showing considerable alteration and sometimes having a schistose structure. In some cases the ore bodies along their trend are capped with magnetic iron oxide through which is disseminated in varying quantities (though as a rule smaller percentages) copper pyrites. The ore bodies appear to occur in contact with the lime and diorite that have a general northerly and southerly trend and an easterly dip. Some of the ores are self fluxing and all are well adapted for smelting. The number of feet of development work done on the leading properties is as follows:

	Sinking, Raising.	Drifting, Crosscut'g.	Total feet.
Old Ironsides	620	2242	2862
Knob Hill	528	2561	3089
Victoria	...	2160	2160
Grey Eagle	..	330	330
Brooklyn	340	1710	2050
Stemwinder	325	165	490
Idaho	50	....	50
Rawhide	...	490	490
Snowshoe	380	1100	1480
Gold Drop	395	1510	1905
War Eagle	242	190	432
	2880	12638	15518

With the exception of the Idaho and Rawhide, all the above named Greenwood camp properties are worked by power plants. The Miner Graves properties are together equipped with three 80 horse power boilers, a 10-drill duplex air compressor, seven hoisting engines, seven pumps for various purposes, 12 machine drills, an electric lighting engine and dynamo and a lot more plant. Another 10-drill air compressor and two more 80 horse power boilers have been ordered and these will shortly be installed on the Knob Hill. The Snowshoe, already supplied with an air compressor, three machine drills, locomotive boiler, steam hoist, etc., is adding to its present plant a 70 horse power boiler and two more drills. The Gold Drop has a locomotive boiler, 4 drill air compressor and three machine drills, and the War Eagle has a similar plant to that of the Buckhorn. The Brooklyn and Stemwinder have three boilers, a 5 drill air compressor, two steam hoists, pumps, etc.

The Old Ironsides No. 2 shaft, now down 400 feet, is the deepest shaft in the district, and the Stemwinder shaft is 325 feet in depth. Some 200 men are on the pay roll in this camp and an early increase by at least 50 is promised. Branch railways have been laid to the Old Ironsides and Knob Hill mines, both of which are prepared to maintain regular shipments of ore to the Granby smelter at Grand Forks. These mines have large and comfortable bunk and boarding houses for their men, besides a number of cottages for the families of married employees.

SUMMIT CAMP.

Summit camp also contains numerous mineral locations. *Prominent among* these is the B. C., which is considered to be one of the most promising mines in the Boundary country. The ore body is wide and consists of solid copper pyrites and pyrrhotite, carrying from 10 to 16 per cent copper and 8 to 10 ounces silver per ton. It has sent out to date about 4,000 tons of ore and is shipping its daily output of about 50 tons, taken from stopes at the 150-foot level and from its development workings in the other parts of the mine. Its working shaft is 272 feet in depth. Three distinct shoots of ore have been exposed by the work done so far and these yield ore of a higher average value than that met with in some of the other camps of the district. The plant at the B. C. includes four boilers, together about 225 horse power, a straight line Rand 4-drill air compressor, half of a Class G Ingersoll-Sergeant air compressor, rated at 10 drills, one large and two small hoisting engines, two sinking pumps, an electric light engine and dynamo and a full complement of accessories. The plant at the Oro Denoro includes boiler, air compressor, machine drills, hoisting engine and steam pump. The Maple Leaf, one of the Rathmullen group of claims, is similarly equipped, and a power plant has recently been got in for the R. Bell. Other well known claims in Summit camp are the Emma, Mountain View, Cordick, Josie, Wake and half a dozen others. The development work includes the following:

	Raising, Sinking.	Drifting, Crosscut'g.	Total feet.
B. C.	621	3103	3724
Oro Denoro	200	500	700
Maple Leaf	225	450	675
Emma	124	25	149
R. Bell	170	147	317
Mountain View	60	158	218
	1400	4383	5783

Branch lines connect this camp with the C. P. R. main line at Eholt. There are about 70 men on the B. C. mine pay roll, and a few are employed at the R. Bell. Other properties will resume work shortly, so the number of *men employed in the camp will then* be larger. Summit camp is eight miles from Greenwood. North of Summit camp about two miles is Pass creek, along which some noteworthy discoveries of copper have been made.

WELLINGTON CAMP.

Wellington camp has four properties at work. The Athelstan, Winnipeg, Golden Crown and Hartford. The number of feet done in development is as under:

	Sinking, Raising.	Drifting, Crosscut'g.	Total feet.
Athelstan	165	280	445
Winnipeg	665	2342	2997
Golden Crown	461	1832	2293
Hartford	167	120	287
	1448	4424	6072

The Winnipeg is down 330 feet and the Golden Crown 322 feet. Both have run drifts and crosscuts at several levels down to the 300-foot and both report an ore vein over 30 feet in width at that depth. Both mines have sent ore to the smelter. That from the Winnipeg returned values up to $22 per ton, whilst Golden Crown ore is stated to run higher. Both are equipped with steam boilers, hoists and pumps, air compressors, machine drills, etc. The Athelstan also has a power plant, but of smaller capacity. The country rock here is of a dark, feldspathic nature, while some of the principal ore bodies occur in gabbro, which appears in quite extensive areas, and in the case of the Winnipeg vein the enclosed rock is serpentine; this, however, is merely an altered gabbro. The ore in this camp is chiefly pyrrhotite near the surface, but as depth is gained it becomes silicious and carries higher gold values. Between 40 and 50 men are employed in the camp.

CENTRAL CAMP.

In Central camp are several properties considered very promising that have been idle for some time. These include the No. 7, Mabel, Oro Cornucopia and others. The City of Paris and Majestic groups are being operated under one management. The former has shipped more than 1,000 tons of ore to the Granby smelter. It is sending out about 25 tons of ore per day and will shortly increase its shipments to 40 tons daily. The two mines together get their power from the same plant, which includes two 80 horse power

(Continued on page 2.)

MONDAY, JULY 30, 1900.

Elsewhere in this issue we publish the portion of the first annual report of the Greenwood Board of Trade relating to the mining industry of the Boundary Creek district, which contains much valuable information about the various mines in the different camps in the district. It is not an exaggerated account, prepared for boom purposes, but a true report of the amount of work done on the most important properties and giving a good description of the machinery used on each. Its description of the ores of the district is also very interesting, and taking it altogether it is the best report for reference about the Boundary Creek district that has ever been published.

Canadian laborers are in danger of being excluded from the privilege of helping to build that portion of the Mackenzie-Mann line which runs through the state of Minnesota.

The Minnesota section of the Mackenzie-Mann line has been so heavily subsidized by the Province of Ontario and Dominion of Canada that it will almost certainly be built entirely at the public expense.

It is hard that the American Alien Labor Law should be so construed as to throw doubts on the right of British subjects to get a day's work on the line which is being built on foreign soil for the benefit of the C. P. R.-Mackenzie-Mann combination with the money of the Province of Ontario and Dominion of Canada.

The magnificent Canadian number of The Northwest Magazine just from the press is worthy of all praise. Besides a large number of distinctly able and exhaustive contributions by prominent Canadians who cover a great variety of subjects, there are scores of fine half-tone illustrations which represent a liberal outlay of money and which advertise our resources to the world as naught else can. We cannot but regard this issue of The Northwest Magazine as one of the most valuable ever published on behalf of the Canadian Northwest. Our various interests are treated practically, our wonderful resources are described fully and accurately, and our home life, environments, and social, religious, educational and other advantages are set forth in clear terms. Interesting stories and sketches, an infinite variety of miscellaneous matter, poetry, wit, humor, anecdotes, etc., help to make this magazine as popular in the home circle as it is in business haunts.

At the second annual meeting of the Associated Boards of Trade of Eastern British Columbia, which takes place at Rossland on August 2, a very large number of questions of importance affecting the general welfare of the interior, will come up, including provincial redistribution, the opening up of new mining camps by means of wagon roads, the perfecting of school system, the securing of a resident court judge in Kootenay and other officers. When the association adjourns a delegation will be sent to Victoria to present the views of the board before the legislature, to endeavor to secure legislation on the lines suggested. The board will be entirely non-partisan in all its actions and no legislation of a contentious or party nature will be favored. On the contrary it will endeavor to favor only such measures as are best calculated to result in the development and upbuilding of the country. With these objects in view good results should follow which will be beneficial to the whole interior of the province.

Each new gold field excitement finds its own victims. Cape Nome has been this season's popular resort for gold seekers. The Klondike craze had become old. The transportation companies had to find new fields in which to work their little scheme, so they baited their hook with Cape Nome and threw it into the sea of humanity. The people bit and each day found steamers of the various transportation companies laden with vast cargoes of human freight bound for the land of disappointment. These transportation companies knew that there was comparatively little gold to be found there, but in order to satisfy their greedy lust for gain they were willing to sacrifice human life. They carried people to that country and allowed them to suffer privations for no other reason than to increase their own earnings. They would, no doubt, take other less expensive means of extracting money from the pockets of the public were it not that the law would not uphold them. It now transpires that there is nothing at Cape Nome but sickness, and people there are beginning to find that they have been deceived. Those that return will probably not be fooled again, but each year finds a different lot of people waiting to hear of some new gold find, and all they have to do is to run up against the transportation companies. They will tell them in a cold-blooded way of some country up north which is always far enough away to command a good figure for the trip. Last year it was the Klondike. This year it is Cape Nome. What field will they select in which to carry on their game of deception next year?

(Continued from page 1.)

boilers, a 10-drill duplex air compressor, six machine drills, steam hoist, pump, etc. About 50 men are employed at the mines, besides a number of freighters engaged in hauling ore to Grand Forks. The following is the chief development work done in this camp.

	Sinking, Raising.	Drifting, Crossc't'g.	Total feet.
City of Paris	720	4280	5000
Majestic	...	1150	1150
No. 7	209	600	809
Norfolk	140	150	290
Mabel & Oro group	175	....	175
	1244	6180	7424

The ore is in two general classes, i.e., the silicious and quartz ores carrying gold and silver in galena, blende, pyrites and tetrahedrite, and the heavy sulphide ore carrying copper. Of the first class, the ore occurs in veins up to 10 feet in width and giving assays up to $60 in gold and 200 ounces silver per ton. Of the second class, the ore bodies are large and give good copper values with some gold.

NEAR GREENWOOD.

Skylark and Providence camps are situate in the immediate vicinity o Greenwood. Narrow veins of ore, rich in gold and silver, are the chief characteristics of those camps. Ore has been shipped from the Providence, Strathmore, Last Chance and Skylark claims, the values returned being generally comparatively high. The Last Chance is equipped with a steam power plant.

THE PIONEER CAMP.

In Smith's camp quartz ores prevail, values being in gold and silver. The Republic group of four claims has had most work done on it in this camp. The Boundary Falls and neighboring claims occasionally show free gold. The American Boy, Ruby and Golconda group, the last named having arsenical iron and copper ores, are other well-known claims. The ores in this camp occur in veins from one foot to eight feet wide, giving good values, and in some cases high silver values.

COPPER CAMP.

Copper camp has immense surface showings of copper ore, but as yet only a very limited amount of development work has been done in this camp, the principal claims in which are the Big Copper and King Solomon. There is a small steam power plant on the latter claim. The copper deposits here occur in contact with lime and porphyry and show large surface outcrops of iron oxide (red hematite) and quartz. In some coarse native copper, euprite and copper glance are distributed through the capping more or less uniformly. Some excellent copper values are obtained in this camp.

LONG LAKE CAMP.

Long Lake camp contains chiefly gold quartz ores in which tellurides of gold occur. The Jewel and Denero Grande are adjoining claims, operated by the same company, which has done the most development work in this camp. The Jewel shaft is down 350 feet. This mine is equipped with two boilers, together 75 horse power, a four-drill, straight line air compressor, three machine drills, steam hoist, pumps, etc. A stamp mill and a cyaniding plant will probably be installed during the coming year. The development work done in Long Lake camp includes the following:

	Sinking, Raising.	Drifting, Crossc't'g.	Total feet.
Jewel & Denero G'de	798	1320	2118
Enterprise	150	....	150
Lakeside	50	55	105
North Star	94	230	324
	1092	1605	2697

OTHER CAMPS.

Seven miles up Boundary Creek by wagon road is Kimberly camp. A large number of claims have been located, but as yet development has gone on in only a small way, no large companies having taken hold of it. The ore here is heavy sulphides (copper and iron), and some pyrrhotite.

In West Copper camp, nine miles northwest of Greenwood, a number of claims have been located. The ores are arsenical pyrites in a silicious gangue, giving gold assays up to $36 per ton.

Very promising camps are being opened up on the North Fork and on the main Kettle River. In the vicinity of Beaverton on the West Fork are some exceptionally fine showings and development work is being carried on actively. At Canyon creek, on the main Kettle, there are extensive deposits of mispickle. The whole of the country referred to is still in its infancy from a mining point of view, but is attracting a great deal of deserved attention and numerous miners and prospectors are going in. Approximate number of men employed in connection with mining in the Boundary:

Camp.	No. of Men.
Deadwood	120
Deadwood, erecting smelter	50
Greenwood	200
Summit	30
Wellington	45
Central	45
Other camps	60
Total	600

It will be understood that the men employed as enumerated in the foregoing table are engaged wholly in the work of development and that in none of the mines are shipping forces employed. As already intimated, there are two large and modern smelters in [illegible] ber of men on the pay roll in the mines will be doubled or trebled.

The following is a summary of the number of feet of development in the several mining camps, and in this connection it may be remarked that the details are of a most conservative character and may be accepted as absolutely reliable.

Camp.	Feet of Work.
Deadwood	8871
Greenwood	15548
Summit	5783
Wellington	6072
Central	7424
Long Lake	2697
Smith's	1600
Skylark and Providence	2000
Prospecting and other work	5000
Total	54995

Careful estimates of the capital actually invested in the mines of the camps surrounding the city, show it to be as follows:

Skylark & Providence camps.	$ 195,000
Greenwood and Wellington	1,400,000
Central camp	520,000
Smith's camp	75,000
Deadwood camp	575,000
Copper and Kimberly camps	40,000
Long Lake camp	305,000
Summit camp	525,000
Greenwood and Grand Forks smelters	405,000

making a total of four million and forty thousand dollars.

[illegible] the Yellowstone.

It may not generally be known that in the Canadian Rockies, says the "National Park Gazette," is a more popular resort than the Yellowstone, yet such is the case. Notwithstanding that the praises of the latter have been published in all quarters; that it embraces one of the most picturesque regions in the United States; that its climatic conditions are supposed to be exceptionally fine; that it is within easy access of many large cities and densely populated communities, or that there is expended on it yearly more than twenty times the amount spent on this park, it is gratifying and speaks volumes for Banff that the number of people who visit this park is in excess of that of the Yellowstone. A good index of the travel in the two parks may be seen in the number of visitors registered annually at the hotels of the two respective resorts. Here are the comparative figures for the past five years:

Year.	Yellowstone.	Banff.
1895	2,470	4,924
1896	2,408	3,996
1897	4,870	5,087
1898	2,207	5,537
1899	3,637	7,387

With this continually increasing travel will come a more intimate knowledge of the country at large, and Canada, the land of Thule, will be known as she is.

A rich strike has been made on the Last Chance claim, near Rock Creek. Recent work disclosed a ledge of copper gold ore, which gave an assay of $76. It is owned by Messrs. Douglas, Atwood, Bergman and McLaine.

CANADIAN PACIFIC

"Imperial Limited"

Service for the year 1900 will be commenced JUNE 10th. The "Imperial Limited" takes you across the Continent in four days without change. It is a solid vestibuled train, luxuriously equipped with every possible essential for the comfort and convenience of Passengers. Ask your friends who have travelled on it, or address

Hon. J. R. Stratton Tells of Its Progress.

The Boundary Country is Attracting More Attention than Any Other District in the Province.

Hon. J. R. Stratton, provincial secretary of Ontario, and editor of the Peterboro Examiner, while on his third trip to this province in a recent interview said:

"Each succeeding trip gives me a new revelation of the possibilities of British Columbia. The theme could not be exhausted in a fortnight. This much is certain: people in the east are only beginning to grasp an idea of your enormous undeveloped resources. What with its forests, minerals, fertile valleys and fishery wealth, British Columbia, at the present rate of progress, will soon rank next to Ontario as the most productive province in the Dominion. A few years hence will see the Oriental trade assuming vast proportions, and Vancouver and Victoria rivaling Montreal in the volume of their tonnage.

"The interior, it is apparent, is forging ahead by leaps and bounds. I was profoundly impressed with the fact that last year's mineral output reached upward of twelve million dollars and that the gold production totalled $4,200,000; yet the mining industry is only in its infancy. When the score or more of Boundary mines become steady shippers, the output will be one at which every Canadian should feel a strong national pride.

"In looking over the returns the other day I was surprised to learn that the assessed value of real estate in the province amounted to $39,000,000, with five millions of exemptions, or a total of $44,000,000. The area is twice that of Ontario which we consider to be an Empire in itself. If your mountains could be levelled the area of 409,000 square miles would be much larger. Easterners formerly worried about the cost of building railways across these mountains, but now they would not object to own a few of these same mountains, many of which are worth as much as a German principality. British Columbia seems to be richer in lumber than any other equal area in the world. Time is only needed to develop an enormous industry. I read recently that half a million feet were taken off a single acre and that the quantity standing in the province exceeded one hundred billion feet. These resources if protected from fire and cut under proper restrictions, will be enough to supply the Pacific coast for all time to come. Not one thirtieth of the known timber land is under lease. I also observe that exports of lumber from British Columbia increased from $214,377 in 1871 to $527,000 in 1898 notwithstanding the closing of the American market, which formerly took nearly all the British Columbia cut. The quantity of lumber cut in 1898, according to the official report, was 124,547,000 feet, from which the province derived a revenue of $106,000. With proper care and by offering the limits for sale by public competion the forests would soon become a great source of wealth. These safeguards have been adopted with advantage and profit in Ontario. I see that the total production of gold in British Columbia from the pioneer days to the present amounts to $123,417,000. With a yearly production of over one million tons of coal, two and one million dollars worth of silver and a million each of lead and copper per annum, who shall say that the province is not coming to the front? The recent discoveries of anthracite on Queen Charlotte and other islands promise to be of prime importance. The great deposits of coal in the mountains and on the coast are mighty factors in your prosperity. They will indirectly strengthen imperial sentiment. It almost seems a providential arrangement that nature had placed coal beds at the two extremities of Canada—on the Atlantic and the Pacific—ensuring a never failing supply for the cruisers of the navy. The present want just now is population.

"I should judge that the government could not adopt a better policy than to expend money judiciously and liberally in building new *trails in order* to open up the country. The provincial revenue has increased from $327,000 in 1872 to $1,420,000 in 1898, a record of expansion that no other province can show; besides the export trade has increased eight-fold since confederation.

Naturally, the Boundary is attracting more attention than any other district in the Province. Every visitor, who returns east, seems to have become a missionary for spreading the tidings of its agricultural resources and gold copper ledges. I was scarcely prepared to find such an El Dorado as the Kettle River valley, nestling among the mountains. The drive to Carson and return, passing fertile farms and fruit orchards, will long live in my memory. Many of the ranches, I understand, are being cut up into ten acre tracts. This is a gratifying tendency, for with the growth of the mining population a profitable market will be found for fruit and garden truck.

Mr. McLeod, postoffice inspector, of Winnipeg, is in town to-day looking after the Midway-Penticton mail contract.
