PROVINCE OF BRITISH COLUMBIA

TWENTY-FIFTH REPORT

OF THE

MEDICAL INSPECTION OF SCHOOLS

FOR THE

YEAR ENDED JUNE 30TH, 1936

PRINTED BY
AUTHORITY OF THE LEGISLATIVE ASSEMBLY.

VICTORIA, B.C.:
Printed by CHARLES F. BANFIELD, Printer to the King's Most Excellent Majesty.
1937.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., January 31st, 1937.

To His Honour E. W. HAMBER,
Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report of the Medical Inspection of Schools for the year ended June 30th, 1936.

G. M. WEIR,
Provincial Secretary.

REPORT ON MEDICAL INSPECTION OF SCHOOLS.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., January 31st, 1937.

The Honourable G. M. Weir, M.A., D.Paed.,
Provincial Secretary, Victoria, B.C.

SIR,—Herewith I beg leave to hand you the Twenty-fifth Report of the Medical Inspection of Schools for the Province of British Columbia.

It is the rule under Government direction for each department to publish a yearly report of the activities in their particular department, and to continue, as it were, a continued story from year to year, showing the relation of the department to other functions of the Government. And more particularly to show that an effort has been made to distribute as far as possible to the people such publications as we send out in order that they may understand the activities of the Government and be able to criticize the information given them and form their opinion as to the progress that has been made.

When I say progress, I mean that we write descriptive articles which may be compared to previous years and which result then into further chapters of the continued story as to the human progress made under the ægis of the Government department which is entrusted with the responsibility of the safeguarding of the health of the people.

We do not expect to be able to describe spectacular advances that are brought about as the result of careful administration, particularly in regard to the presentation of the work to the public in general. But we endeavour to show that the increase in the work of the Department, which is very material from year to year, is brought about through the necessity of the Department meeting the results of the advances that we are advocating to the people in regard to the health-work in general.

The work of our Department has one solid foundation which we preach from day to day and from year to year, and that is the prevention of disease. We do not in our Department undertake the management of individual cases or attempt to cure disease. Our mission is broader and more far-reaching in its effect in regard to the improvement in health of the people and the diminution of disease by the prevention of disease.

When we look back over the last five years, when we can show a decrease in the diseases, devastating particularly to children, as having disappeared almost entirely, one is apt to value the progress in dollars and cents, following the custom of the country. But this cannot be done.

We can appeal to the people to evaluate the saving in lives in their families, the saving of money by the prevention of disease and sickness, the increase in the value of the human asset, by noting the growth, the health-growth of the children, by noting the great improvement in the advances that are being made in the schools, because a sick child in a class in the school is simply a disappointment to himself and a drawback to the other children.

People from time to time interview us in regard to these matters and make very favourable comments as to the results that we are accomplishing.

In addition, we have by teaching health and hygienic modes of living brought about a decided change in the physical surroundings of the children. The school environment must conform to the improvement in the pupils, and in order to do this every school should be a model as to cleanliness, heating, ventilation, lighting, and means of recreation. No child is permitted to be unclean. The children from a school, properly conducted as to health-giving conditions, form healthy habits which stay with them through life. School hygiene is of immediate and vital interest to every community. It is part of the great business of every community in the way of making and keeping the people well. The school should be a model for the community in cleanliness and health-giving conditions.

Physical perfection must and does go hand in hand with spiritual welfare. There is no use trying to uplift the morals of the rising generation if the environment is, if I may use the term, materially immoral.

Prevention has been our key-note. There is one item in connection with the health of the people which has been neglected more than any other, through ignorance, and through entire absence of the knowledge of what will happen to them in after-life if they continue to neglect the teeth. We have used every effort to impress upon the people that, if the teeth are neglected, the child will suffer from chronic diseases as they grow to manhood or womanhood.

One way to convince the people is by demonstrations in a practical manner of the postulates that we are laying down. We followed this policy last year and we have held dental campaigns in different parts of the Province during the year. As the result of our work in conjunction with the local organizations, particularly the Women's Institutes, we treated during the past year 6,699 school-children, and we append an interesting account of the work which was done in the Municipality of Surrey under the Women's Institute.

I do not think it is necessary to comment on this report, which gives in a terse form an account of the feeling of the people, especially when the demonstration was completed. Following the work in Surrey, one of the dentists who assisted in the Surrey work went north and completed some work in the Peace River country, and I am attaching copy of a report received from this dentist.

These reports read like a fairy-tale, but I only wish we had space to publish the letters from all parts of the Province from happy parents, from grateful women's organizations, thanking us for the work we have done.

We are only beginning and intend to continue the demonstration. It is only by having the force of public opinion behind us that we can hope to accomplish our object. It is our aim to bring our efforts to the point where some practical results may be obtained, and that is by having every one convinced that it is their duty to visit their dentist once or twice a year for an examination and not wait until the teeth are sacrificed or half a dozen operations have to be carried out, such as fillings and the rest of it. In this way the work could be carried out at a very small cost.

HEALTH-WORK BY WOMEN'S INSTITUTES.

WOMEN'S INSTITUTE BRANCH,
DEPARTMENT OF AGRICULTURE, January 26th, 1937.

Dr. H. E. Young,
Provincial Officer of Health,
Parliament Buildings, Victoria, B.C.

DEAR SIR,—I beg to submit a report on the health-work in which the Women's Institutes in this Province have co-operated.

"I have never spoken at a meeting before, but I cannot sit still. From the bottom of my heart and soul I want to thank whoever made it possible to have the teeth of the children of this school treated."

So spoke a member of the Hazelmere Women's Institute at the Birthday Party in April, 1936. Continuing in an unsteady voice, she said: "No one who has not experienced it can believe the difference. For years there has not been a week elapsed that I have not had one or more of my five children home from school with toothache, crying through the night, losing days from school, and now you would not know them. They are full of life and spirits. Oh! If there is anything I can do to help this work, to bring health to other children, let me know. And again I express my gratitude to whoever is responsible for this great blessing."

This woman is one of the mothers of the 1,608 children treated by the dental clinic organized through the efforts of the Women's Institutes, the Parent-Teachers' Association, and the Provincial Board of Health.

Early in 1935, Mrs. R. E. Kocher, President of the Hazelmere Women's Institute, began the campaign for a municipal nursing service. Failing in this, she tried for a dental service. Again failure confronted her, but optimism and determination seem to be the principal ingredients of Mrs. Kocher's character, coupled with an unfailing good nature. For, as she smilingly assured a member of one of her audiences, "You cannot offend me, you know, because I am not working for myself."

Mrs. Kocher's third attempt for a dental service was for the three school districts comprising the area served by the Hazelmere Women's Institute. The mouth condition of the pupils of these three schools was carefully examined by the local dentist at the expense of the Provincial Department of Health. The mouths of 127 children were examined and defects were noted on dental charts for each of the 127. In this Garden of British Columbia, this land flowing with milk and honey, just *one* child has perfect teeth. One hundred and twenty-six children had defects ranging from one cavity to fifteen. Some teeth were so bad that they

should all have been removed. The Hazelmere Institute raised the necessary amount of money and after a great deal of delay dental treatment was begun for these children. In the meantime residents in other school districts of the municipality became interested. Meetings were held and the dental report on these 127 children was discussed. But to a great extent the authorities were working in the dark because the only available figures as to the probable cost of the clinic came from the Peace River, where 1,105 children were treated at an average cost of $1.75 each. It was thought that the children of the Fraser Valley could not have such bad teeth as those of the Peace River District. However, when the work was completed (by the same dentist who treated the Peace River children), it was found that the cost averaged $3.11 for the 1,608 children of the Surrey District owing to the enormous amount of work required for each child.

The Surrey method of organization and administration is one to be commended. Each school district agreed to raise a certain sum per pupil, based on the enrolment of the schools. When that sum was collected, it was deposited in the bank and a deposit-slip sent to the secretary-treasurer of the executive of the dental clinic, who paid the dentist by cheque. Thus the secretary-treasurer, Miss Francis Martin, handled no actual cash. She reports:—

"We feel most certain that the people of this municipality realize and appreciate what has been accomplished in this dental service at so little cost to them. We hope next year to have the work carried on again in most of the schools through the Parent-Teachers' Association or the Women's Institute."

Probably this Surrey clinic was the most noteworthy for several reasons—the lack of interest at the beginning, the large area which was served eventually, and the quality and cost of the work. The cost per patient was very reasonable, clearly demonstrating that by co-operation almost any parents can afford to have their children's teeth kept sound. As has been told previously, the cost per patient in the Peace River District was almost half the cost of that in the Surrey District.

In the Chilliwack District five institutes contributed towards the fund raised by the Rotary Club.

In Kaslo the Women's Institute assisted the Women's Auxiliary to the Canadian Legion and ninety-one children received treatment.

At Nelson the Women's Institute has been active in agitating for dental service not only for Nelson, but for all adjacent districts.

While on a visit to Gibsons Landing in October I spoke of the need for dental treatment for children, and was told: "Ever since the Provincial Board of Health paid for the first dental clinic in 1926 the Council has had the dental work done annually."

Pender Island Women's Institute, one of the Gulf Islands group, has a sum of money collected to continue the dental service.

I visited the points in the Lillooet District and am sure that dental service would be provided if a little time was spent at the larger centres instructing groups in the method of organization. Every one I met showed a sympathetic understanding of the importance of this service.

Port Moody Women's Institute is considering a dental clinic for their community.

Courtenay is still considering the nursing and dental service.

At the District Conference held in Parksville the following resolution concluded an animated discussion, in which most of the delegates took part (the resolution received unanimous endorsation):—

"Whereas there exists a tragic need of assistance for children suffering from dental decay, defective eyesight, diseased tonsils, and many other ailments:

"And whereas there is no agency so effective nor so economical as a Public Health Nurse in helping parents and Women's Institutes to detect and remedy these:

"And whereas the cases of relief and charity are similarly effectively handled by the Public Health Nurse:

"And whereas such a nurse placed in any district can, by the regular work, demonstrate in six months the value of her services in dollars and cents in any district:

"Therefore be it *Resolved*, That we, the Women's Institutes of Vancouver Island North, in conference assembled, respectfully urge that an increased amount be granted to the Provincial Department of Health in order to further assist in establishing Public Health Nursing

services and in helping those districts anxious to remedy the teeth, eye, and tonsil defects of children."

Moved by Mrs. Tryon, Parksville; seconded by Mrs. Marshall, Qualicum; and carried by the Vancouver Island North District Women's Institute Conference.

Respectfully submitted.

V. S. McLachlan,
Superintendent, B.C. Women's Institutes.

REPORT ON DENTAL WORK IN PEACE RIVER AND SURREY.

825 Granville Street,
Vancouver, B.C., January 5th, 1937.

Dr. H. E. Young,
Provincial Officer of Health,
Parliament Buildings, Victoria, B.C.

Dear Dr. Young,—The following is a report on my work and observation during my association with the British Columbia Board of Health in connection with dental work completed for school-children in the Peace River District, also the Surrey school dental work for the year ended 1936.

The successful handling or, may I use my own term, contacting with children is a problem in itself. In this work I use certain methods which I have followed during my entire length of practice, and so far have never failed in successfully meeting the child, except where the parent interferes. First of all, to be successful in this work one must have a genuine affection for all children; to many dentists the sight of a child means trouble, whereupon it should mean another little friend. One must make a thorough study of human nature, understand and know how to apply psychology, and one must never deceive or make a false statement to a child; I learned this many years ago.

The work in Surrey County was greatly needed, and in all the time I spent there I met 583 children. For these children I performed 3,797 operations, averaging 6.5 per child. This would seem, and is, a very high average, proving the deplorable dental condition among the school-children existing in this district. In all, I might say that the work here was most pleasant in every way. The co-operation of the local committees interested in this work proved a great factor in its success, and I am sure the future will bring its just reward.

Now to take you to the far north, to the Peace River District. Here I found the dental condition much improved as compared to last year; this of course was to be expected. There were, however, many children treated this year that were either missed last year or else new within the district. The average per child last year, I believe, was 3.6, while this year we find it 2.6. The most noticeable change I found was the cleanliness of the mouth and the wonderful improvement of the child's attitude towards the dentist. As, for instance, in one case I recall a boy of 12 who I had just filled three teeth for; he was such an ideal patient, so pleasant and jolly, that after having finished, I made this remark: "Well, George, it has been a great pleasure to do this work for you to-day, and I am really sorry to see you go."

He laughed and remarked: "Well, that is different from what you told me last year."

"Oh!" I asked, "And what did I say?"

"Well," he replied, "I thought you were going to give me a good shaking."

"Did you deserve it?" I asked.

"Yes, I did," he replied.

"Well," I remarked, "hasn't it been a wonderful change this year; everything has been so pleasant." I was really sorry to see George go. There are many interesting incidents like this that I might make mention of, but I prefer to hold until later date, when I hope to write more fully my memoirs of my work in connection with school dentistry. The number of children contacted in this district for this year is 1,040. The work in this district is very difficult owing to the fact that many children are obliged to travel a long distance over roads that are sometimes impossible for the modern vehicle. For instance, in one place I recall five young girls in their teens that walked 11 miles each way in order to have their dental work done. There are cases where it has taken many hours for a group of children driven

by horse-team to reach the clinic, arriving late in the day. Under these circumstances you will understand it is absolutely necessary that this work be completed at once, as a return trip would be out of the question. This makes it necessary for a dentist to work many times long after hours. This year we were obliged to work two Saturdays all day, and Sunday as well, without a let-up. However, we were able to complete almost on schedule time, due greatly to the efficiency of Dr. J. S. Cull and the charming, efficient, and kindly nurses, members of the Board of Health staff of the Peace River District.

It was also very interesting to note the very few permanent teeth that had to be extracted as compared with last year. For instance, I removed only thirty-four this year and treated over 1,000 children, whereas, I was obliged to extract many hundreds last year for about 600 children. The number of the thirty-four extracted were for children that had not been treated last year; others were cases where we attempted to save six-year molars if possible, which later broke away; others were cases where only temporary fillings were used in order to save the tooth for at least another year.

Where no previous work has been done for children who have reached the age of 10 or 12 and upwards, I believe it will take about three years of annual treatment before the desirable condition has been obtained. This of course necessitates seeing the child at least once a year for three consecutive years.

In closing I might state: "To me it was a great pleasure; although the work was hard, the burden was always lessened by the kindly thoughts of each and every member of your staff in this district."

Yours very truly,

A. R. CURRIE.

Details of the examination of each school follow.

I have the honour to be,

Sir,

Your obedient servant,

H. E. YOUNG,

Provincial Health Officer.

* All the boys and girls examined this year.

SCHOOLS—*Continued.*

Other Conditions, specify (Nervous, Pulmonary, Cardiac Disease, etc.).	Vermin.	Scabies.	Impetigo.	Ringworm.	Acute Fevers which have occurred during the Past Year.	Condition of Building. State if crowded, poorly ventilated, poorly heated, etc.	Closets. State if clean and adequate.
Cardiac, 1					Rubella	O.K.	
Orthopædic (pigeon-chest); heart (functional system), 2							
Cardiac, 1					Measles; whooping-cough	Good	Clean; adequate.
Cardiac, 1; pulmonary, 2					Scarlet fever	O.K.	Clean; adequate.
						Satisfactory	Clean; adequate.
Old rickets, 1; cardiac flutter, 1; anæmia, 3; flat left chest, 1; acne, 1; hay-fever, 1; ganglion wrist, 1					Rubella	Good	Yes.
Phlebitis, 1; tachycardia, 5; orthopædic, 1; hemangioma of lip, 1					Measles; mumps; influenza; scarlet fever; pertussis	Good	Good.
Cardiac, 4					Mumps; measles	Good	Yes.
Orthopædic, 1; blepharitis, 1					Measles	Good	Clean; adequate.
Heart, 6; congenital defects, 4; acne, 3; bronchitis, 3; orthopædic, 2; mass in neck, 1							
					Rubella, 28; chicken-pox, 5; 5, mumps, 9	Good	Good.
					Measles	Inadequate	Inadequate.
						Good	Good.
Cardiac, 2; Raynaud's, 1					Rubella, 1	Good	Yes.
Posture, 1; anæmia, 2						Satisfactory	Clean; adequate.
Orthopædic, 1							Yes.
Heart, 4; lungs, 3; appendix, 1							
Heart, 3; lungs, 1; appendix, 3							
Heart, 10; scoliosis, 2; lungs, 3; appendix, 11							
Heart, 3; wax, 4					Scarlet fever, 1	Temporary quarters since fire; very crowded in two rooms; O.K. before	
Chest, 1; hay-fever, 1; anæmia, 18; acne, 7					Chicken-pox; measles; whooping-cough	Satisfactory	Clean; adequate.
						Good	Clean; adequate.
					German measles	Good	Good.
Orthopædic, 1					Measles, 13; rubella	Fairly satisfactory	Satisfactory.
Acne, 1; pulmonary, 1					German measles	Frame; good; heating and ventilation satisfactory	Yes.
Scarlet fever innoculations, 160; endocarditis, 3					Scarlet fever; mumps; German measles	Satisfactory	Clean.
Cardiac, 1						Satisfactory	Clean; adequate.
						Satisfactory	Yes
						Satisfactory	Yes
Cardiac, 1; vaccinations, 320					Mumps, 2; rubella, 17; scarlet fever, 1		
Cardiac, 5; vaccinations, 389					Mumps, 1; rubella, 29; scarlet fever, 2		
Cardiac, 2; pulmonary, 1; vaccinations, 260					Mumps, 1; rubella, 9; scarlet fever, 1		
Cardiac, 7; pulmonary, 4; vaccinations, 669					Mumps, 31; measles, 2; chicken-pox, 2; whooping-cough, 1; rubella, 114; scarlet fever, 5		
Cardiac, 21; vaccinations, 654					Mumps, 1; measles, 1; rubella, 24; scarlet fever, 6		
Cardiac, 2; vaccinations, 294					Mumps, 3; chicken-pox, 1; rubella, 41; scarlet fever, 1		
Cardiac, 4; pulmonary, 1; vaccinations, 369					Mumps, 2; rubella, 38; scarlet fever, 8		
Cardiac, 1; vaccinations, 328					Rubella, 9; scarlet fever, 3		
Pulmonary, 1; vaccinations, 604					Mumps, 16; chicken-pox, 4; rubella, 72; scarlet fever, 1		
Pulmonary, 1; vaccinations, 143					Mumps, 4; chicken-pox, 5; rubella, 10		
Cardiac, 5; pulmonary, 4; vaccinations, 473					Mumps, 1; scarlet fever, 4; measles, 1; rubella, 51		
Anæmia, 2; asthma, 1; acne, 5; cardiac, 10; eczema, 1; enuresis, 1; orthopædic, 21; nervous, 1; pallor, 2; furunculosis, 1; nasopharyngitis, 1; malosclusion		1	1	1	Mumps, 3; rubella, 70; chicken-pox, 3; scarlet fever, 2	Good	Clean; adequate.
Asthma, 1; acne, 3; chorea, 1		2			Mumps, 5; rubella, 23; Vincent's angina, 1	Fair	Fair.

SCHOOLS—*Continued.*

Other Conditions, specify (Nervous, Pulmonary, Cardiac Disease, etc.).	Vermin.	Scabies.	Impetigo.	Ringworm.	Acute Fevers which have occurred during the Past Year.	Condition of Building. State if crowded, poorly ventilated, poorly heated, etc.	Closets. State if clean and adequate.
Cardiac, 8; chest, 1; crippled, 2; clubfoot, 1	6	11	1		Mumps, 24; German measles, 16; influenza, 175	Good; not crowded; well ventilated; well heated	Clean; adequate.
Pneumonia, 2		4			Measles; whooping-cough, mumps; chicken-pox	Good	Fairly clean.
						Satisfactory	Yes.
Defects corrected, 54; defective posture, 55					Measles, 179; chicken-pox, 34; scarlet fever, 2; mumps, 30; whooping-cough, 1		
Defects improved and corrected, 31; rickets, 3; defective posture, 54							
Paralysis, 1; cardiac, 1; anæmia, 8; harelip, 2; cleft palate, 1; osteomyelitis leg, 1						Good	Good.
Chorea, 16; pulmonary and bronchial, 17; cardiac, 9; flu, including the whole four Kelowna schools, 150. There are very many cases of a streptococcus infection of throat with influenza-like symptoms, causing very many cases of otitis media. Ten times more cases of paracentesis of ear-drum than in any one other year		4	17	3	Measles, 7; pinkeye, 8; scarlet fever, 1; chicken-pox, 43	Buildings all modern; well ventilated, lighted, and adequate	Modern; clean; adequate.
Nerves, 1							Clean; adequate.
Cardiac, 7; asthma, 2			2	3	Chicken-pox, 12	Satisfactory	Yes.
Epilepsy, 1; otitis media, 1; defective speech, 1; tonsillectomy, 6; influenza, 6; tonsillitis, 9; bronchitis, 3; fractures (arm, finger, collar-bone)					Scarlet fever, 3; rubella, 31; mumps, 44; chicken-pox, 21; whooping-cough, 8	Poorly ventilated; fairly crowded	Clean; adequate.
Influenza, 9; tonsillitis, 7; appendictomy, 1; fractures, 1 (arm). sprained ankle; otitis media, 1; pleurisy, 1; eczema, 2; tonsillectomy, 6; asthma, 1					Whooping-cough, 5; scarlet fever, 4; rubella, 52; mumps, 36; chicken-pox, 19	Poorly ventilated; heating fair	Clean; adequate.
Influenza, 5; fractures, 1 (arm); epilepsy, 1; defective speech, 3; tonsillectomy, 1; St. Vitus's dance, 1; tonsillitis, 2; otitis media, 1; pinkeye, 4				3	Scarlet fever, 9; rubella, 18; mumps, 40; chicken-pox, 4	Poorly ventilated; fairly crowded; poorly ventilated	Clean; adequate.
Influenza, 11; tonsillitis, 18; sinus, 1; bronchitis, 2; appendectomy, 2; tonsillectomy, 4; fractures, 2 (arm), 1 (finger); asthma, 2; sprained writs, 1; fingers, 5; ankle, 1		3	4	3	Scarlet fever, 11; rubella, 31; mumps, 55; chicken-pox, 8	Poorly lighted	Clean; adequate.
Heart, 7; pneumonia, 1; rheumatism, 3; strep. hæmolyticus		9	8	1	Measles; pertussis	Generally good	Clean; adequate.
Heart, 3; rheumatism, 1; chorea, 1		7	7	4	Measles; pertussis; parotitis	Generally good	Clean; adequate.
Cardiac, 5; pulmonary, 1; orthopædic, 8; nervous, 1; anæmia, 14	1	9	11	3	Scarlet fever, 22; chicken-pox, 5		
Cardiac, 2; pulmonary, 1; orthopædic, 8; nervous, 3; anæmia, 7	1	5	5	5			
Cardiac, 2; pulmonary, 3; orthopædic, 11; nervous, 4; anæmia, 11	3	5	4		Mumps, 45; German measles, 160; measles, 3		
Cardiac, 1; anæmia, 1		2	6				
Cardiac, 5; orthopædic, 6; anæmia, 6		3	5	6	Whooping-cough, 20; diphtheria, 1		
Anæmia, 30; petit mal, 1; rickets, 2; nervous, 1; cardiac, 2; orthopædic, 1; hay-fever, 1					German measles; measles	Seem rather crowded	Yes.
Orthopædic, 3; ear, 3; tachycardia, 6		10	3	3	Pertussis	Good	Clean.
Tachycardia, 3; orthopædic, 1; asthma, 1		7		1	Measles; mumps; influenza; scarlet fever	Good	Clean.
Cardiac, 1; defective speech, 3			6	4	Measles, 109; chicken-pox, 2; mumps, 40; whooping-cough, 15	Good	Good.
Blepharitis, 5; orthopædic, 1; stye, 1; nasal catarrh, 1					Measles; scarlet fever	Good	Clean; adequate.
Blepharitis, 2; cardiac, 3; hernia, 2; orthopædic, 2; ozena, 1		2			Measles; scarlet fever	Good	Clean; adequate.
Acne, 3; otitis media, 2; chorea, 1; pleurisy, 2; dermatitis, 1; bronchitis, 5; orthopædic, 2; heart, 5; congenital ichthyosis, 1					chicken-pox, 1

Trachoma, 1						Poor	Fair.
						Crowded	Adequate.
Cardiac, 1						Good	Clean; adequate.
						Good	Clean; adequate.
						Fair condition; ventilation and heating poor	Clean; adequate.
Heart enlargement, 1						Poorly lighted	Insufficient for number of pupils; urinal required.
Eczema, 1					Influenza	Satisfactory	Not. adequate.
						Good; frame	Clean.
						Crowded; poor condition	Clean; adequate.
Anæmia, 1; cold, 1						Fair	Fair.
						Satisfactory	O.K.
						More light needed at left; otherwise satisfactory	Yes.
Anæmic, 1						Fair	Fair.
Trachoma, 8						Satisfactory	Clean; adequate.
Posture, 1						Satisfactory	Clean; adequate.
					Flu	Good	Clean; adequate.
						Good	Clean.
Pyorrhœa, 1; poison-ivy, 1					Measles; pertussis; pinkeye	Good	Clean; adequate.
						Good	Yes.
						Satisfactory	Yes.
						Satisfactory	Yes.
						Satisfactory	Yes.
Trachoma, 8						Good	Good.
Posture, 6; cardiac, 1		1			Scarlet fever, 2	Satisfactory	Clean; adequate.
Posture, 1; chronic appendicitis, 1					Scarlet fever, 1	Good	Need attention.
						Satisfactory	Clean; adequate.
					German measles, 9	Good	Clean.
						Clean	Clean.
Trachoma, 2; cardiac, 1						Good	Fair.
						O.K.	O.K.
						Good	Clean; adequate.
						Good	Clean; adequate.
Anæmia						O.K.	O.K.; requires dry earth.
					Scarlet fever; chicken-pox	Good	Two flush-toilets.
Cardiac, 10; scoliosis, 8; pulmonary, 1; trachoma, 2 (only 6 other cases); T.B. test, 37					German measles, 9; chicken-pox, 87	Good, but rooms poorly lighted	Not satisfactory.
Asthma, 1				1	Measles, 10	Fairly good	Clean; adequate.
St. Vitus's dance, 1					Measles, 35; whooping-cough, 1	Satisfactory	Satisfactory.
					Measles	Good	Good.
Cardiac, 1						Good	Clean; adequate.
					Measles; whooping-cough	Good	Good.
Cardiac, 1						Fair	Acceptable.
						Satisfactory	Clean; adequate.
Cardiac, 1						Good	Good.
						Satisfactory	Clean; adequate.
Cleft palate, 1					Scarlet fever, 2		Clean; adequate.
Posture, 1; anæmia, 1; pigeon-chest, 1						Satisfactory	Clean; adequate.
Flatfoot, 1						Good heating and ventilation	Clean; adequate.
Nephritis, 1					Chicken-pox, 1	Overcrowded and poorly ventilated; need a new school badly	
					Measles, 2	Fair; rather crowded	Two; clean.
Nervous, 1						Good	Clean; adequate.
						Satisfactory	Yes.
						Satisfactory	Yes.
					Influenza	Good	Yes.
					German measles; flu	Good	Clean; adequate.
						Good	Clean; adequate.
Chronic appendicitis, 1						Excellent	Clean; adequate.
					Measles	Satisfactory	Clean.
						Old and crowded; advise new building	One; clean; need two.
		2					
Posture, 1					Diphtheria, 1	Satisfactory	Need repairs.
						Good	Clean.
Phlyctenular conjunctivitis, 1			1		Measles	Crowded	New toilets needed.
