NEWS OF THE CAMPS

The Highland Queen Consolidated Mining and Milling Company's Properties.

Shipments from the Old Ironsides, Victoria and Knob Hill—New Machinery for the Snowshoe—Improvements at the Mother Lode—The War Eagle.

Very little has been heard of late about the Highland Queen Consolidated Mining and Milling Company's properties, but the company has been steadily going ahead and developing their claims with very satisfactory results. Every dollar that has been spent has made a good showing. The work has been carried on under good management, and the properties never looked better than they do at the present time.

The Highland Queen Consolidated Mining and Milling Company, Limited, was incorporated in Spokane, Wash., in January, 1897, and was registered in British Columbia, as a foreign company, in May of the same year. Its head office in British Columbia is at Midway. The company owns the Highland Queen, Big Windy and Snowdrop claims.

THE HIGHLAND QUEEN.

The Highland Queen is situated near Anaconda. It was located on the 15th day of April, 1895. Development work consists of a shaft, 5x7, 34 feet deep, showing a well defined quartz vein two feet wide, well mineralized with iron, galena and zinc blende, assays from which gave 200 ounces in silver and $40 in gold per ton. The ledge crops out on the surface a distance of 300 feet and is from 10 to 18 inches wide. The strike of the ledge is northerly and southerly and it dips to the east at an angle of 20 degrees. A large iron cap was discovered on the property about 200 feet east of the main shaft, and a shaft was sunk on it, showing a large body of iron sulphide, with some copper. When work was suspended a short time ago some beautiful ore had been struck. The claim has been surveyed and a crown grant applied for.

THE BIG WINDY

was located on the 31st of March, 1895. It is situated in Providence camp, on Eholt creek. Development work consists of a shaft, 5x7, 40 feet deep, at which depth a well defined quartz vein three feet wide, which was well mineralized with copper and iron, and assaying $12 in gold and from 8 to 16 oz. in silver and 3 per cent copper per ton, was encountered. Much surface work has also been done. The strike of the vein is east and west and it dips to the north at an angle of 25 degrees. It is an ideal location for the shipment of ore as the Columbia & Western runs through the centre of the property and within 200 feet of the shaft. It has been surveyed and a crown grant applied for.

THE SNOWDROP

is situated in Douglas' camp, about three miles east of Midway and near the International Boundary line. It was located on the 25th day of March, 1897. The International, a property with a good showing, joins it on the east. Development work consists of a tunnel 42 feet in length, the face of which shows a strong ledge of blue quartz carrying copper, galena and iron and assaying $10. No great depth was attained by this tunnel, so that the assay was almost a surface one and the ledge that was encountered was not the main one, but it is expected that by continuing the tunnel another 40 feet the main ledge will be tapped, and as the hill is more precipitous for the next forty feet than where the tunnel has already been run a greater depth will be attained, and it is altogether likely that better assays will be obtained, for it has been found that on nearly all the properties in the vicinity of the Snowdrop the values of the ore have increased very rapidly the farther they went down on them. Although enough work has been done on the Snowdrop to entitle it to be crown granted, the company intends to resume work this fall, and expect that by the time the Standard Copper Company's smelter is in operation it will be in a position to ship, and this is where the Snowdrop will have a great advantage. Situate as it is there is a good wagon road from the smelter site almost to the property, and as the rock is of such a nature as to be easily worked, the cost of mining and hauling the ore to the smelter will be so comparatively small that it will give a better return after paying all expenses, than many high grade properties which are expensive to work and inconveniently situated for the transportation of its ores.

THE WINNIPEG.

A winze is being sunk on the first vein in the crosscut north from the shaft at the 300-foot level of the Winnipeg mine, Wellington camp. Although but little depth has yet been gained in the winze, the vein has already widened from two to four feet of good looking ore. A carload is being shipped to Trail to ascertain its value. The railway ledge now shows six feet of shipping ore, a crosscut under the old 35-foot level, from which ore was taken out some time ago and the stope filled with waste, having run into this nice ore body. The last returns received from the smelter were from a 20-ton car, which netted $375 after payment of freight and treatment charges. There has been a decided improvement in the condition and prospects of this mine since Superintendent N. Tregear assumed charge of it.

THE SNOWSHOE.

What is known as the railroad tunnel of the Snowshoe mine, in Greenwood camp, is now in nearly 300 feet, the greater part of this distance in ore. A crosscut now being driven from this tunnel is in 40 feet and is not yet through the ore body. The 70 horse power boiler recently received has been built in and will shortly be ready for use. Other new plant lately received at the mine includes a 42 inch by 10 feet air receiver, two 3¾ Little Giant drills and a 3x2x3 Snow boiler feed pump.

THE OLD IRONSIDES.

The shipment of the Old Ironsides, Victoria and Knob Hill, to the Granby smelter, Grand Forks, to date number about 190 cars, approximately 5600 tons. At present 110 men are employed.

The new shaft house at the No. 1 shaft of the Old Ironsides, which is 28 feet by 80 feet, is about completed and a new hoisting engine is now being placed at this shaft to replace the old one, which will be taken below ground for use there.

A new building will shortly be erected for the hoist at the mouth of No. 2 shaft, on boundary line between Old Ironsides and Victoria. The big hoist at this shaft is not on a sufficiently solid formation, so it will be removed and placed on rock foundation.

Two 80-h.p. boilers are being bricked in at the Knob Hill and a new 9x12 hoist is being installed. There is not much new development work being done at present on these properties, but ore is being stoped in the Knob Hill and Victoria.

A diamond drill is now being used in prospecting on the Banner claim adjoining the Old Ironsides on the west.

THE MOTHER LODE.

The foundations for the 35-drill compressor and two 100-horse power boilers have been finished at the Mother Lode, and a new dining hall is nearly completed. A tramway has lately been constructed from the mouth of the main shaft to the ore bins, which are being filled with ore from the dump near by.

The north drift at the 300 foot level is now in about 180 feet. Ore has been cut in two crosscuts, one at 90 feet from the shaft and the other at 150 feet. The ore body is about 20 feet wide in the former, but the other is not yet through it. The south drift is in about 140 feet. There are two crosscuts from this drift and the rock in the faces is becoming mineralized.

THE WAR EAGLE.

In the summer of 1891 there were made, in a part of the Boundary Creek district since known as Greenwood camp, five locations, embracing mineral claims all of which to-day give promise of becoming permanent mines. There may have been other locations made about the same time, but it is of these five neighboring claims that mention is here being made, and of one of them in particular—the War Eagle—that it is intended now to give fuller information. The locations of the Old Ironsides and the Knob Hill were both recorded on July 25th, 1891, at Camp McKinney, that being the nearest recording office. The former was located by M. Hatter, since deceased, and the latter by Henry White, nine days later, on August 3rd. The location of the Stemwinder by James Atwood, now a resident of this place, and James Schofield, who returned to England in 1898, was recorded. On August 4th the Brooklyn was recorded, Steve Mangott, now of Fairview, and Joseph M. Taylor, still resident within four or five miles of this claim, being the locators. The War Eagle was located by Robert Denzler and W. A. Douglas, and was recorded on August 20th. The former is now in Spokane, Wash.

Much has been published of the Old Ironsides, Knob Hill, Stemwinder and Brooklyn from time to time, but not nearly so much prominence has yet been given to the War Eagle. The reason is a very simple one—the four first named properties were acquired by Eastern capitalists before the War Eagle was and their systematic development was entered upon much earlier. All five claims, however, have one thing in common, viz., they were all located under an earlier Mineral Act which gave them extra lateral rights (that is the right to follow their ore on its dip even should it continue into an adjoining claim) and they are all now controlled by Eastern Canadian companies.

Any one familiar with the hill or mountain upon which are situated the Old Ironsides, Knob Hill, Victoria, Grey Eagle, War Eagle, Tamarac, Monarch, Gold Drop, Snowshoe and adjacent claims will agree with the statement that the numerous mineral outcroppings, taken in relation to underground developments on several of the group, mark this particular section of Greenwood camp as giving extraordinary promise of mineral wealth.

The War Eagle has an altitude of 5,070 feet above sea level. It is situated in thickly timbered country and so possesses the advantage of having a home supply of mine timber and fuel. It has, too, a fair water supply for mine purposes. On the claim occur three outcrops of mineral, but sufficient work has not yet been done to determine their connection, if any, with one another. It matters little though whether these are the outcrops of separate veins or of one big lead split up near the surface; whether they are extensions of the big ore body already followed from the Knob Hill into the Grey Eagle and believed by some to continue thence into the War Eagle, or are quite distinct from that deposit. There is this one simple but important fact standing out, that where prospecting below ground copper-gold ore of good quality has been found to underlie the mineral outcrops, so that developments to date encourage the belief that with depth the War Eagle will give a good account of itself and be a valuable mining property on its own merits and so will be quite independent of the reflected seeming importance so often attached to a claim that is considered to be well situated or in simply in good company.

The War Eagle is owned by the Greenwood-War Eagle Gold-Copper Mining Company, of Sherbrooke, Quebec, capitalized at $1,500,000. Its officers are Mr. T. J. Buck, President; Mr. C. H. Fletcher, Vice President, and Mr. C. A. French, Secretary Treasurer. The mine is equipped with the following power plant: One 80-horse power horizontal return tubular boiler, half of a 10-drill Rand duplicate air compressor, one 42 inch x 10 feet air receiver, three 3¾ Little Giant drills, 20-horse power hoisting engine, 14x7x12 Knowles station pump, No. 5 Cameron sinking pump, 4½x4 boiler feed pump, Wainwright feed water heater and all requisite accessories. The plant is conveniently arranged and is housed in a roomy sawn lumber building, which also serves the purpose of a shaft house. The work done in the course of underground development includes a double compartment vertical working shaft, 105 feet in depth, with a crosscut at the 100-foot level running easterly 205 feet and westerly 170 feet. At the west end of this crosscut a raise has already been made connecting with an open cut some 25 feet in depth, sunk in a strong outcrop of magnetic hematite impregnated with copper pyrites. The raise ran into ore at about half way to the surface, so this ore body has consequently been opened up at a depth of about fifty feet. An average sample from right across the working gave gold $1.60 and copper about $20. From this it will be seen that the values were chiefly in the latter metal. An upraise is now being made at the eastern end of the crosscut to connect with a prospect shaft from which some nice looking copper ore was obtained down to its depth of between 20 and 30 feet. The intention is to proceed with development work, sinking and crosscutting so as to determine where the ore lies in quantity.

Mr. C. G. Buck is the company's resident manager, and Mr. D. H. Duncanson is its mine foreman. There are usually from 15 to 20 men on the payroll.

MONDAY, AUGUST 27, 1900.

The way to increase the price of mining shares is to offer none for sale.

It takes 80 armed men to hold down a mineral claim in Canea, Sonora. In British Columbia three posts answer the purpose.

Oom Paul Kruger, in the way he urges the Boers to keep on fighting, reminds one of Artemus Ward, who wanted the civil war in the U. S. to go on if it cost the lives of the last of his wife's relations.

Caste is a wonderfully handy thing for those who do not want to work. In Canada the employee is as highly thought of as his or her employer so long as the work is properly performed. Take no stock in people who refuse to work at this or that for fear they will lose social caste.

According to population, Canada is the best served of the countries of the world regarding railways, having 3,210 miles of railway per million of inhabitants, and the United States coming next with 2,645 miles; the Argentine Republic has 2,080 miles; Sweden 1,247 miles, whilst Great Britain has 534 miles. The disproportion between different countries in respect to the ratio of mileage is impressive. Thus, assuming Great Britain, with 534 miles of road to each million of inhabitants, as the standard for a well peopled country, then the United States, with a population in 1898 of, say, 70,000,000, would be entitled to only 37,360 miles of railway, or one-fifth of the actual mileage. On the other hand, British India, instead of only 21,500 miles of road, or 70 miles to each million of people, should have 153,790 miles to be on a par with Great Britain, and little Japan, by the same reasoning, should have about eight times its present mileage, or 23,500 miles of road, instead of less than 3,000 miles. What China should have with its 400,000,000 of inhabitants, may be imagined.

DISPUTE SETTLED.

Arbitrators' Award re Indebtedness of Ontario and Quebec to Ottawa.

Ever since Confederation there has been a dispute between the Dominion and the Provinces of Ontario and Quebec, relative to the indebtedness of the latter provinces, then known as Canada, to what now constitutes the Dominion, and the matter has dragged along its course for over 30 years. An Ottawa despatch says that the case has at last been settled, and the commission appointed to ascertain the exact indebtedness has submitted its awards to the Finance Department. The counsel for the Dominion was W. D. Hogg, and the arbitrators, Sir John Boyd, Sir Louis Cassault and Judge Burbridge. The first award deals with funds in possession of Ontario belonging to the Dominion, and is simply the stamping as correct by the arbitrators of the account admitted by the two parties as correct. Ontario presented on June 2, 1900, a statement showing in the possession of the Province, but belonging to the Dominion, $1,815,848.59. This statement was admitted correct by counsel for the Dominion. Certain matters in respect of the common school fund and of the Northwest Angle treaty No. 3 have not been finally concluded and determined, as the principal or capital of certain funds held by the Dominion for the Province have not been entered in the statement to the credit of the Province, and this award is and shall be taken to be made with respect only to the interests dealt with in the said statement and without prejudice to the authority of the arbitrators in the final settlement of the accounts. The second award is the settlement of the amount due by the Provinces of Quebec and Ontario jointly, and paid by the Dominion as arrears of increased annuities to the Ojibway Indians of Lakes Huron and Superior under the Robinson treaties of Sept. 7th and 9th, 1850. The amount fixed is $205,000. The third award proportions between Ontario and Quebec the direct debt assumed by the Dominion in 1867 as follows: Ontario, $112,450.53; Quebec, $100,553.51. The awards are all dated August 1st.

NEWS OF THE CAMPS.

(Continued from page 1.)

Both manager and foreman have their homes on the property, and besides their residences, the mine buildings include comfortable boarding and bunk houses for the miners and other employees. The War Eagle is within a mile of the town of Phoenix, with which it has wagon road communication. Later, when the mine shall have been sufficiently opened up to require direct connection with the railway, it will be an easy matter to find a good grade for a spur line from Hartford Junction, distant only a mile or so.

The Sunset sent out its second carload of ore last week.

Crosscutting at the 150-foot level is now being carried on at the Crown Silver.

It is reported that the Evening Star and Selby claims, in Wellington camp, have been sold by Messrs. Fraser Bros. to Andrew Laidlaw, of Denver, Col.

On the J. and R. in Wellington camp the shaft is down 30 feet, and the shaft on the Hard Cash 18 feet, in very rich ore. The ore is chalcopyrite in a quartz gangue.

The Athelstan in Wellington camp is shipping ore. One hundred tons have been hauled to the Winnipeg spur this week. Shipment will average about two cars a week.

An assessment has just been completed on the Houston in Triple Lake camp, owned by the Vancouver and Boundary Creek Mining and Development Company. A rich lead of quartz carrying tellurium was disclosed.

The buildings, ore bins and trestles at the Mother Lode smelter are all completed and little more can be done until the plans for the foundation for the machinery come from Milwaukee, whence some of the plant was shipped last week.

Robert Wood has purchased from A. Robinson of Beaverton the Alice M. and Hard Times, adjoining the Sally group up the West Fork of the Kettle river. Mr. Wood has opened up a rich ledge on the Sally group, which he is developing.

A few of the freight teams of R. Meyerhoff, of Midway, are at present engaged hauling ore from the Golden Eagle mine, in Brown's camp. This mine has ready for immediate shipment 1000 sacks of ore, amounting to about two carloads. The ore came from the 45 and 100-foot levels. About half a car had already been hauled down to the railroad. The shipment will be sent to the Trail smelter.

C. M. Melville, J. Winters and B. Ingrim returned on Friday from Beaverton, where they have been doing assessment work on the Silver King, a promising mineral claim of which they are the owners. It is situate about a half mile east of Beaverton, and adjoins the well known Black Diamond. Two assessments have been done on this claim, and some very good ore has been taken out containing gold, copper, silver and lead, but as no report has been made by the assayer no exact statement with regard to it can be made.

Spencer Benerman has returned from Triple Lake camp, where he in company with H. Strouss have been working on the Foothill, which is close to the O. K., only a small fraction lying between them. The Foothill is a full claim and is owned by Mr. Benerman. A large open cut has been run for about 30 feet and strikes the ledge at a depth of ten feet. A crosscut was run on the ledge for about 15 feet, the first eight feet being of arsenical iron but copper was coming in towards the foot wall. It is supposed that this is the O. K. lead. There are two more leads on the property running parallel to the main one. On one of these considerable work has been done showing it to be about 10 inches wide and is described as being a white quartz carrying tellurium, and from the nature of the ore it is supposed to run very high in gold. The other lead was found to be about 10 feet wide, it is also a white quartz well mineralized with arsenical iron. Messrs. Benerman and Strouss will leave again on Wednesday to do the work on the Arlington group, up the West Fork.

While on a visit to Copper Mountain up Meyers creek T. McAuley visited a number of the principal properties of that district. He says that Copper mountain has the largest showing he has seen in this country. On the Homestake, owned by Dittmer Bros., there is good ore from the grass roots. A tunnel has been run for a distance of 40 feet, the face of which is all in ore and is described as a magnetic iron, carrying gold and copper. Considerable work has been done as well, in the way of surface prospecting, and several small shafts have been sunk each disclosing a ledge of good ore, which it is believed will give good assay values. On the Copper Queen owned by D. McClung and W. Fosbender, an 85-foot shaft, was sunk, disclosing a four foot ledge of copper sulphide ore, which gave assays all the way from $15 to $90 in all values. The Neutral is another good property, and although no great amount of development work has been done, yet a ledge of magnetic iron ore has been discovered, which gave very satisfactory assays. The Ram's Horn and Cariboo are among the more important properties. They are owned by Mr. McAuley and associates. Development work on the former consists of a number of open cuts and several shafts. In one shaft at a depth of 25 feet a ledge of ore was encountered, carrying copper pyrites and assaying $25 per ton. The Cariboo has considerable work done on it. The main shaft is down about 30 feet and at that depth a rich lead of high grade ore was encountered similar to that on the Ram's Horn. Mr. McAuley considers that some day the mines of Copper Mountain will rank among the first of the province.

THE GAME LAWS.

The open seasons for game are, respectively, as follows, both days being inclusive:

September 1st to February 28th—Bittern, ducks of all kinds, heron, meadow lark, plover.

September 1st to December 31st—Caribou, elk, wapiti (bull), grouse of all kinds, including prairie chickens, hare, moose (bull).

September 1st to December 14th—Deer (buck), deer (doe), mountain goat, mountain sheep (ram).

November 2nd to March 31st—Beaver, land otter, marten.

Unless specially provided, it is unlawful to shoot or destroy the following: Insectivorous birds, English blackbird, caribou (cow or calf), chaffinch, deer (fawn under 12 months), elk, wapiti (cow), elk, wapiti (calf under two years), gull, linnet, moose (cow or calf under 12 months), mountain sheep (ewe or lamb), English partridge, cock pheasant, quail of all kinds, skylark, thrush, and eggs of protected birds.

It is unlawful to buy, sell or expose for sale, show or advertisement: Insectivorous birds, bittern, English blackbird, caribou (cow or calf), chaffinch, deer (fawn under 12 months or doe), elk or wapiti of any sex or age, grouse of all kinds, except blue grouse, which may be sold during the open season; gull, linnet, meadow lark, moose (cow or calf), mountain sheep (ewe or lamb), English partridge, cock pheasant, hen pheasant, quail, robin, skylark, thrush, at any time.

It is unlawful to buy, sell or expose for sale, show or advertisement: Caribou, hare, bull moose, mountain goat, mountain ram, before October 1st; buck deer, blue grouse, plover, during the close season.

The Great Northern's President Threatens a Stupendous Rate War.

The freight department of the Canadian Pacific Railway Company are reluctant to believe that President Hill of the Great Northern Railway will carry out his alleged threat to precipitate one of the hottest and longest freight wars ever known in the history of railroading. The Great Northern have now under construction two gigantic steamships, which, as soon as completed, will be placed in the trans-Pacific service, and President Hill has declared that he will establish a through freight rate of not more than $8 from Buffalo and other points on the great lakes to Yokohama, Nagasaki, Hong Kong, Shanghai and other places on the coast of Japan and China, and this rate may be cut to $7, one-half to go to the railway end of the business and the other to the steamship.

The statement has been viewed with considerable apprehension by the competing lines, because, if carried into effect, they would have to face the alternative of ceasing to handle through freight to China and Japan—a preposterous supposition in view of the expense that has been incurred in the establishment of those services—or meet Great Northern aggressiveness by a rate war.

There is very little reason to doubt that if President Hill gives effect to his threat both the Canadian Pacific and Northern Pacific, which practically cover Great Northern territory, would feel bound, in self-defence, to meet the Great Northern rate whatever it may be.

So recently as the beginning of May the representatives of the whole of the steamship and railway companies engaged in trans-Pacific trade met in conference at San Francisco and entered into a firm and binding agreement, after mature deliberation, as to trans-Pacific steamship and railway rates. It was thought that these rates had been placed on a permanent basis, which would be maintained for years in view of the fact that the companies engaged in that trade had lost hundreds of thousands of dollars through the unsettled and unsatisfactory rate conditions.

Amongst the representatives who attended that conference was Mr. G. M. Bosworth, the general freight manager of the Canadian Pacific Railway, and no one was more sanguine than he as to the permanency of the arrangement.

If Mr. Hill carries out his threat the decisions of the conference will be so much waste paper, and where there is now harmony there would be utter demoralization.

CANADIAN SOLDIERS.

Their Mining Rights Are Protected During Their Absence.

The following are excerpts from a bill recently introduced in the legislature:

All free miners' certificates held by members of the Canadian forces or the Strathcona Horse who now are serving, or have served, in South Africa, and in force at the time said members left Canada, shall, without any further payment, be extended to the time of the passage of this act and for a period of one year from the passage of this act, all matters and things in the mineral act and amending acts, and the placer mining act and amending acts, to the contrary notwithstanding.

The assessment work on all mineral claims so held under the provisions of the mineral act and amending acts by any member of Her Majesty's Canadian forces, or the Strathcona Horse, now serving, or having served, in South Africa, shall be deemed to have been done from the time of the holder leaving British Columbia, and one month before, and therefrom continuously to the time of the passage of this act, and for one year thereafter.

All mineral claims that may be held under the placer mining act and amending acts by any of the members of said forces and said Strathcona Horse shall be considered as laid over continuously from a day one calendar month before the holder thereof left British Columbia to the date of the passing of this act, and for one year thereafter.

All gold commissioners and mining recorders shall record, or cause to be recorded, in proper form, all such matters and things as may be necessary to carry out the provisions of this act.

If any mineral claim or placer claim has lapsed, or the owner so serving, or having served, has become dispossessed thereof by reason of his being a member of such force, his interest in said claims shall be revived on the passage of this act and he shall hold said claims for a period of one year therefrom, any statute to the contrary notwithstanding.

The James Cooper Manufacturing Company have just closed a contract with the Crow's Nest Pass Coal Company for the equipment of their mines at Fernie, the plant to consist of a 26x30 straight line, Ingersoll Sergeant compressor and 10 coal cutting machines of the new model, with all accessories which go toward making up a plant complete in every detail. This compressor is the largest engine of its class ever built in Canada.

ATTENTION!

There is no better investment at the present time than Midway property. Those who bought in Spokane a few years ago have since made fortunes. Midway is the Spokane of the Boundary Country. It is the coming metropolis of the interior. Trains will be running into Midway in a short time and the prices of lots will go up. Invest now and make money.
