PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., December 31st, 1937.

To His Honour E. W. HAMBER,
Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report of the Medical Inspection of Schools for the year ended June 30th, 1937.

G. M. WEIR,
Provincial Secretary.

REPORT ON MEDICAL INSPECTION OF SCHOOLS.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., December 31st, 1937.

The Honourable G. M. Weir, M.A., D.Paed.,
Provincial Secretary, Victoria, B.C.

SIR,—Herewith I beg leave to hand you the Twenty-sixth Report of the Medical Inspection of Schools for the Province of British Columbia.

In a young and growing Province such as British Columbia, isolation of some of the districts militates against the children all receiving proper special treatment, and in some cases also the financial condition of the parents precludes the possibility of such recommendations being carried out, but it is safe to say that 90 per cent. of the cases requiring attention have been looked after and have been benefited.

The majority of the medical men are in accord in saying that the decreasing number of those receiving treatment on their recommendation is due to the fewer children requiring treatment. It is also noticeable that when the opinion of teachers who have been a number of years in the same school has been obtained, all say they note a decided improvement in the physical condition of the pupils the past year or two as compared with conditions at the time they went to the school.

It has been found that early recognition of acute trouble by the teacher and report of the same to the Medical Inspector has enabled us to check epidemics of diseases which are more peculiarly noticeable in school-children, and it also enables us to keep our schools in operation even although there are serious epidemics existing; and in this connection I wish to emphasize the wisdom of keeping children in school rather than closing schools in the presence of communicable diseases in a community. School-contact instances of infection are rare if the system of medical inspection is at all adequate, and the presence of the children in the classroom each day, where they can be systematically observed for symptoms of approaching illness, offers a far greater degree of safety to the children and protection to other children than can be attained by allowing them to be in their homes or on the street in indiscriminate contact with other children.

Such control may be exercised by any community, and the school, instead of being the focus for the dissemination of communicable diseases, may become, because of its very adaptability to control, one of the most valuable methods we have of limiting the spread of communicable diseases in any community.

The success of medical inspection depends upon the interest taken by and the co-operation between the doctor, the teacher, and the parent. As a medical man, I may take the liberty of criticizing other medical men in regard to the work done, and I must say that, on the whole, the medical men have carried out their work in a satisfactory manner; with this exception, however, that as medical men, of course, they are prone to look upon the pupil as a patient and to confine their work entirely to the examination of the pupil. There are other factors which should come under the purview of the doctor; that is, proper heating of the school, lighting, ventilation, general sanitation of the school, seats, blackboards, exercises of the pupils. These are all factors which the Medical Inspector must have constantly in mind in order to prevent as far as possible the acquisition of disease or defects by the children in the grind for an education. A thorough physical examination is of the utmost importance, and this is a point to which I should like to call the attention of the members of the Women's Institutes. Objections have been made by the mothers to the examination of the children, particularly growing girls. I cannot see why there should be any objection to this. The medical man appointed is well known, examinations would be conducted with the child apart from others, and the examination made in exactly the same manner as if the doctor had been called into the home to examine the same child. We have had objections registered against the examination, insisting that no clothing should be loosened without first obtaining the consent of the parents; the result of this is that many children are examined only in regard to eyesight, teeth, and tonsils. The child may have been suffering from a crooked back, deformed leg or arm, weak heart, or lung-trouble. This examination need not be made every term, but say twice, as they

do in New York. Have such examination made in the first, third, and sixth year of the school-life. If necessary, the parents could be notified and, if they wished, could be present. It is the intention of the Department to ask the doctors to make these examinations at regular intervals, and I am asking through the Women's Institutes the consent of the parents to this procedure being carried out.

It is essential for the proper working of the Act that all defects should be discovered. If the children are to be benefited by our efforts, no good can be accomplished by doing the work in a half-hearted manner. The teacher has a great deal to do with the enforcement of the Act, and the teacher's opportunity is the greatest in building wisely and well for the future of the community. They are dealing with the young and plastic minds—minds that yield readily to new suggestions and ways of doing things. The teacher that is well trained in hygiene is worth almost twice as much to the community as the teacher who can attend to the mental needs of her children only, and who is indifferent to the many conditions which bear directly upon the health of her charges.

Following the above observations, we wish to say that we have been afforded an opportunity this year of taking stock of the work that is being done. It is difficult very often to get the expression of the people in regard to the work, as they make up their minds that it is being carried out and they take it for granted; but this year, in connection with the Commission appointed in Ottawa in regard to the Provincial and Dominion relations, questionnaires were sent out which gave us an opportunity of reaching all our people, and the answers that we received have certainly been very gratifying.

We asked them to give us their opinion of the work in general and results obtained. This was only one amongst many questions, but they were answered, and we take great pleasure in printing the following extracts from different points in the Province. While other places have not devoted as much time to this phase of our questions, yet in addition to this commendatory condition there has not been a single instance of criticism of the work. Please read these over carefully and then give consideration to the point as to whether you feel that you have received a very large percentage of beneficial returns for the comparatively small expenditure that has been made.

I. "For your information I would advise you that this service was commenced by the Municipal School Board in April, 1928, as an experiment, endorsation to which was given by the Board of Trustees on February 2nd, 1929. From that time a School Nurse has been employed continuously. Commencing the first of October of this year, an additional nurse was engaged, financial assistance being forthcoming from the leading women's organizations and Service Clubs in the district, in addition to which your own Department allowed a substantial grant towards the cost of the additional Nurse.

"The importance and appreciation of this work conducted throughout the seventeen schools and also work in the district has accomplished through the efficient service rendered by the various Health Nurses employed by the Board from time to time, also through their efforts to educate the people by means of lectures given to organizations, health exhibits, health talks in the schools, distribution of suitable health literature, the promotion of T.B. Clinic, Guidance Clinic, and Dental Clinic, also the Health and Baby Clinic conducted annually at the Agricultural Fair.

"Anti-goitre tablets have been distributed to the pupils in the schools, in addition to which pupils have been inoculated as a preventive measure against diphtheria, and just recently a T.B. test has been conducted throughout the municipal schools under the direction of Dr. Lamb. One of the most important benefits secured from this service has been the marked regularity of attendance of the pupils as epidemics and skin-diseases have been quickly brought under control, and at no time since the inception of the service has there been any reason for the closing of the schools."

II. "In comparing results with the former arrangement by which a Medical Inspector gave the pupils a cursory examination once or twice a year, the following appear to be the main advantages:—

"We have fewer epidemics and what we have are held in check so that there is much less loss of school-time. Our schools have not been closed on account of an epidemic since the nurse began her work (1929). Prior to that it was a frequent experience.

"There is less absence on account of colds and minor troubles.

" There is a constant oversight of teeth, tonsils, malnutrition, etc., leading in many cases to correction.

" Mothers are educated in the better care of children.

" We are confident that these results will be cumulative and more and more improvement shown as the years pass.

" Our main suggestion for improvement would be that greater financial assistance should be given to enable district municipalities to take more advantage of the present plans by establishing a complete Health Unit with a doctor and sufficient nurses in charge. At the present time this is beyond the means of a municipality that depends on taxes from farm property for the principal part of their income."

III. *Re* benefits from our present District Nursing System:—

"(A.) *In the Schools.*—(*a.*) Since the appointment of a School Nurse there have been no epidemics of contagious diseases in our municipal schools. An outbreak of diphtheria—e.g., in 1935—was promptly and effectively controlled through the care of the nurse and was prevented from spreading.

"(*b.*) The proportion of underweight children has been materially reduced. Milk is provided for all the children recommended by the nurse for this treatment, and a general improvement in health is noticeable.

"(*c.*) Tonsils and adenoids have been removed in many cases owing to the work of the nurse in securing the co-operation of the parents or of local societies in aiding the parents to have urgent cases attended to without delay.

"(*d.*) All serious cases of eye-defects have been carefully attended to. Here again the nurse has been able to arrange for many needy cases by securing help for the necessary optical expenses.

"(*e.*) A great improvement has been observed in the care of the teeth and serious cases of dental defects have been attended to, with financial assistance where required.

"(*f.*) The health talks by the nurse in the schools have made the children health-conscious. The shield presented each year to the school with the highest aggregate of health marks has stimulated the pupils' desire to measure up to a higher standard.

"(*g.*) An improvement has been noted in the average daily attendance in the schools and we feel sure that retardation for physical reasons has been greatly diminished.

"(B.) *For the Community.*—(*a.*) The nurse's visits to the homes of underweight or physically defective children have in many instances been a great help to the mothers.

"(*b.*) The nurse's visits to expectant mothers, together with the prenatal literature sent to them by the Department of Health, have been gratefully received and have proved most helpful.

"(*c.*) The literature sent by the Department to mothers of children under school age, *re* diet, etc., has also noticeably improved the general care of young children and has been ably supplemented by periodic visits from the nurse."

IV. " In our opinion it would be more equitable if all School Boards were compelled to vote enough funds to pay their proportion of the expense of employing a School Nurse.

" We are of the opinion that the majority of the residents of the school districts now served by us are satisfied that the benefits derived are well worth the cost.

" There is no doctor in the district and some of the great benefits derived are: The fact that mothers can consult with the nurse and determine whether a slight illness needs the attention of a doctor or not.

" Frequent inspection of the children in the schools and the exclusion of those suffering from communicable disease.

" Clinics of various kinds are held."

V. " The Public Health Association has functioned very satisfactorily for a number of years, and the benefits derived from the nursing service are being felt by the whole community. The nursing service has been particularly beneficial in preventing, to a very great extent, the spread of infectious diseases, thereby enabling the schools to remain open when it would otherwise have been necessary to close them. The children are carefully examined all the year round, and in addition all other public-health work is taken care of."

VI. " In regard to the benefit being derived, the Board is quite delighted with the success of the work and the improvement in the general health of the children."

VII. "Our Board is unanimously agreed that the work of the local nurse in the public schools of the district has been of a distinct value and benefit. This is particularly true as there is no active resident doctor in the district."

VIII. (A new district.) "In the fall term the nurse has been giving excellent service, both in the schools and in the homes. Her work is very much appreciated and I am sure will, in the future, be regarded as a necessary part of our educational system."

IX. "After consultation with the nurse, the principals and others interested, I beg to submit the following as, in the main, the opinion of this Board respecting the benefits from present health policies and their suggestions for improvement.

"Besides the obvious advantages of having a nurse on hand skilled in first aid in case of accident or sudden illness and in the forestalling of epidemics by early detection of first cases there are secondary benefits, in part as follows:—

"The nurse checks up on all absentees by visiting the home of any pupil absent more than one day and thus makes contact with parents.

"This friendly contact tends to encourage co-operation between the parents and teachers and must be of advantage to the children.

"The presence of the nurse prevents or checks malingering on the part of pupils who often pretend illness in order to be allowed to go home. The nurse can detect such cases better than the teachers.

"This is of particular use when a pupil claims excuse from physical drill.

"The Board is entirely in favour of the nursing service and respectfully suggests that improvements can be made by advancement rather than by change. Thus when, in the case of domestic economy, an immediate improvement was shown when a supervisor was appointed and a regular study course mapped out, interest and success followed, so this Board believes that a supervising nurse should oversee the work of city nurses and lay out for them a regular course of instruction for both teachers and pupils."

X. "In the opinion of our Board of Trustees, also the parents of school-children, the benefits obtained through this service are very valuable, especially as our school population is always changing, due to the bad conditions on the Prairies and the easy means of transportation these days."

XI. "It is the general opinion of the Board of School Trustees that considerable benefit is derived from the health-work carried out in the schools, and as far as this district is concerned there are few improvements to suggest, now that the examinations of children by the Medical Health Officer are more thorough, if less frequent than before."

XII. "We are quite satisfied that the work of a nurse is a great benefit to the pupils in our schools, and well worth the money spent in our school district.

"We have no suggestions to make *re* improvements on our present system."

XIII. "The Board wishes me to state that it is very satisfied with the work as carried on in the schools, and that in the new schools recently completed two nurses' rooms have been provided and furnished, one at the elementary school and one at the new senior and junior high school."

XIV. "Our health situation is now being looked after better than it ever was before."

XV. "The above-mentioned staff carry out a very efficient programme and render excellent preventive service, which is provided without cost to the pupils. The Board has no definite suggestions to offer in the way of a change in so far as our service is concerned and wishes to point out that the services provided in our district have been wonderfully improved in the past ten years. The Board is always willing and anxious to assist in this branch of work, with a view, when opportunities offer, to make same more efficient and more widespread wherever possible."

XVI. "It is rather difficult to express in words or in figures the direct benefits derived from the services of a School Nurse, as an analysis of the matter shows considerable interlocking of functions. However, some of the following observations may be of interest and benefit to you:—

"To put it in a few words, the benefit obtained is one of value to the community in general and to the school in particular. Naturally, the betterment of health conditions in the school is reflected in the general well-being of the community.

"It is rather interesting to note the effect of the work of the nurse on the attendance of the pupils at school. An analysis of the percentage of weekly attendance at the schools before the employment of a School Nurse and after brings out the following interesting facts:—

"(*a.*) School attendance has been more sustained. Previous to 1930 when the first School Nurse was appointed in this city the school attendance normally showed a gradual decline, aside from season fluctuations, until the Christmas vacation. Since that time, however, the figures show that the high level of September has usually been maintained, and in some cases increased, during the fall months.

"(*b.*) Epidemics of contagious diseases have been less frequent and of shorter duration.

"(*c.*) In September, 1934, a suitable School Nurse to fill the vacant position was not obtained until the latter part of the month and an epidemic of scarlet fever was not checked at the outset. As a result the attendance for the latter part of September and for October was the poorest that it has been since 1930.

"Previous to 1930 it was the duty of the teachers to examine the pupils, and the lack of proper knowledge and experience in matters of germ diseases led to frequent and widespread epidemics. The teacher could not be expected to give the children the proper check-over that the nurse is able to give, and I am certain that many 'carriers' existed who would have been excluded by a person with more medical knowledge.

"From the standpoint of the teacher and of the Board, sustained attendance means more efficiency. In addition, the teacher is now at liberty to spend more of his or her time in actual teaching than under the former conditions.

"Undoubtedly the employment of a School Nurse represents a saving to the parents. Her frequent visits to the home of the ailing pupil or student and her valuable and practical advice often obviates the necessity of calling in a doctor.

"Under the arrangement previous to 1930, the pupil or student received a medical examination once every year—and usually a very superficial examination at that. At the present time every child is examined once during his or her school-life by a doctor, but also he or she receives an almost daily check-up by the School Nurse. The advantages of this daily check-up in contrast to the yearly examination are readily apparent.

"In addition, the School Nurse is able to work in co-operation with the medical authorities in seeing that pupils or students are excluded and confined when affected by contagious diseases. This was not always possible in the past."

XVII. "As to the benefits to be derived from the school-health work, the lessening of communicable disease by prompt supervision and action and the recognition and control of minor skin diseases are two of the more important. Also the regular yearly school examination by doctor and nurse leads to many cases of poor eyesight or bad teeth or tonsils receiving earlier attention than would otherwise be the case. Minor treatments to date this year have been 348. Immunization clinics in the school are also arranged by the nurse, and considerable work has been done in that direction this year. She also arranges for the giving of iodine tablets for goitre, and the serving of soup during the winter months to those children who bring lunches to school.

"No doubt more time could be spent in the schools (257½ hours is the amount to date and 332 home-school visits) and more frequent class-room inspections and class-room talks given, but in a district growing so rapidly, and where there is so much prenatal and infant-welfare work to be done, it is felt that already as much time as possible is being devoted to this service."

XVIII. "The health-work as carried out in the schools is beneficial, in that it checks the spread of infection, inspection of teeth with a view of having any defects corrected, and takes care of underweight and undernourished children by having them drink milk during the morning recess period. Other physical defects are also noted by the nurse and such defects corrected as far as possible. In addition to this work, prenatal and postnatal clinics are established, which prove beneficial to mother and child alike."

The preceding eighteen sections are verbatim accounts of the work in different districts, and indicate, first, the fact that the public are entirely satisfied with these results which will bring about, of course, a further extension of the work.

We are laying foundations for modern, up-to-date health-work, applicable to the citizens at large. It is bringing about both in the community at large, and particularly in the schools and homes, the understanding that will continue to insist not only upon extension, but that the standard of the work shall be as it is without any recession, with a continued obligation of improvement and extension.

The different departments under our plans have not been referred to particularly, but I would refer in one way to the dental work, which is being continued with most satisfactory results. We have treated over 8,000 children and have tried to drive home to the parents that now that we have cleaned up all the back work and defects, that it is their duty to take their children to the dentist for regular examinations at least once a year, and better, once every six months. You can have a very small beginning defect treated for almost nothing, but if you let them run on from year to year it not only costs a great deal of money, but loss of teeth, loss of health, and loss of progress in the schools.

Details of the examination of each school follow.

I have the honour to be,

Sir,

Your obedient servant,

H. E. YOUNG, M.D.,

Provincial Health Officer.

SCHOOLS INSPECTED.

Medical Inspectors	157
Reports from Medical Inspectors	157

High Schools.

Schools inspected:	1935–36, 100: Reported, 82; not reported, 18.

	1					Lighting in old school poor; new school good	Good.
						Poorly heated	Clean; adequate.
					Measles; scarlet fever	Light in one only fair; both rooms crowded	Adequate, but no sewage.
						Good	O.K.
Diabetes, 1					German measles, 6; influenza; chicken-pox, 2	Satisfactory	Satisfactory.
						Needs chinking	Good.
Ringworm					Measles	Good	Two; clean.
Poor posture, 1					Measles; influenza	Crowded	Poor.
						O.K.	O.K.
						Good	Clean.
Cardiac, 2			1			Good	Good.
					Mumps; whooping-cough	Fair	Yes.
Acute eye-ulcer, 1; acute appendix, 1				1	Measles, 24	Crowded	Yes.
Influenza, 2		1			Measles, 1	Heating fair	No.
						Good	Two; good.
					Measles, 5	Lighting fair	Yes.
		1					
					Influenza; measles	Good	Yes.
Cardiac, 2					Mumps; whooping-cough	Good	Yes.
Nervous, 1						Good	Yes.
					Whooping-cough	Good	Satisfactory.
						Good	Yes.
					Measles	Not crowded; well heated and ventilated	Yes.
						Excellent	Clean; adequate.
					Influenza (epidemic); whooping-cough	Well ventilated and heating satisfactory	Clean; adequate.
Nervous, 2; orthopædic, 1; epilepsy, 1; eczema, 1					Mumps, 11	Poorly lighted, ventilated, and heated	In need of repair.
					Influenza; measles	Satisfactory	Clean; adequate.
Cleft palate, 2					Measles	Not crowded; well heated and ventilated	Yes.
Hordeolum, 1						Rather small heater	Yes.
Cardiac, 1; pigeon-chest, 1						O.K.	O.K.
						Good	Yes.
						Frame; fair condition; natural ventilation; stove	Two; clean.
Trachoma, 2						New; adequate	Clean; adequate.
						Satisfactory	Satisfactory.
						Excellent, but crowded	Good.
Valvular, 14; goitre, 7; eczema, 1; flat chests, 6; late poliomyelitis, 1						Ventilation poor	Clean; adequate.
						Satisfactory	Yes.
Pulmonary, 2; lateral curvature, 1						Satisfactory	Satisfactory.
					Measles	Good	Yes.
					Influenza, 3	Satisfactory	Satisfactory.
						Good	Good.
Cardiac, 1; anæmia, 2; scoliosis, 1; psoriasis, 1; Erb's paralysis, 1					Mumps, 17; whooping-cough, 4	Good	Good.
						Adequate	Clean; adequate.
Hernia repaired					Measles	Good; location bad	Two; clean.
Ichthyosis, 2					Measles	Good	Two; clean.
						Satisfactory; poor water supply	Satisfactory.
						Poorly heated and lighted	Unclean; inadequate.

ASSISTED SCHOOLS—*Continued.*

Other Conditions, specify (Nervous, Pulmonary, Cardiac Disease, etc.).	Vermin.	Scabies.	Impetigo.	Ringworm.	Acute Fevers which have occurred during the Past Year.	Condition of Building. State if crowded, poorly ventilated, poorly heated, etc.	Closets. State if clean and adequate.
					Rubella	Heating only fair; ventilation poor	Fair.
						Satisfactory	Clean; adequate.
		1			Pinkeye, 8	Good	No.
					Influenza	Good	Two; clean.
Trachoma, 2						Good	Fair.
						O.K.	O.K.
					Rubella	Satisfactory	Satisfactory.
Cardiac, 1; pulmonary, 1						Good	Clean; adequate.
						Good	O.K.
					Measles	Good	Yes.
Cardiac, 13; anæmia, 4; scoliosis, 4; trachoma, 3; infantile paralysis, 2		2		1	Influenza; mumps, 43; infantile paralysis, 1	Good; basement room in use crowded	Not satisfactory.
					Scarlet fever, 2	Fair	Fairly clean; in need of repair.
Cardiac, 2; orthopædic, 2; chorea, 1; pulmonary, 1					Influenza	Satisfactory	Satisfactory.
						Satisfactory	Fair.
						Good	Adequate.
						Satisfactory	Poor.
					Influenza; measles	Lighting only fair	Adequate, but no sewage.
						Satisfactory	Clean; adequate.
Cardiac, 1							
						Satisfactory	Clean; adequate.
Cleft palate, 1					Scarlet fever, 22		Clean; adequate.
Posture, 1					Rubella	Satisfactory	Clean; adequate.
Flat feet, 1						Stove old and inadequate; otherwise satisfactory	Yes.
						Good	Clean.
					Measles	Good	Two; clean.
						Needs cleaning	Clean; adequate.
						Adequate	Good.
Exophthalmic goitre							Yes.
Cardiac, 1						Lighting none too good	Old.
					Rubella	Satisfactory	Fair.
						Adequate	Clean; adequate.
						Very poor	Good.
Lordosis, 1							
					Rubella	Satisfactory	Satisfactory.
						Good	Clean.
					Whooping-cough	Crowded	Clean; adequate.
						O.K.	O.K.
						Adequate; good	Yes.
						Only fair	Poor.
1 mental child referred to clinic rejected for school, undesirable						Fair	Fair.
						Adequate	Good.
Bronchitis, 1							
						Good	Dirty.
			1			Good	Two: good.
						Good	Good.
Nervous, 3; orthopædic, 1					Measles	Poor building; overcrowded; no playground	Clean; adequate.
Posture, 5; cardiac, 12		2			Measles, 63	Good	O.K.
			2		Measles	Satisfactory	Clean; adequate.
Cardiac, 6; urticaria, 1							
						Adequate	Good.
						Good	Good.
					Scarlet fever; measles; influenza; whooping-cough	Satisfactory	Adequate, but no sewage.
						Satisfactory	Satisfactory.
						Satisfactory	Clean; adequate.
Heart, 1							
Heart, 1							
					At least 100 cases of measles	Good	Clean; adequate.
					Influenza		
						Good	Good.
						Good	Fair.
					Influenza	Good	Yes.
Nervous, 2 (mild chorea, 1); mitral murmurs, 4						Lighting improved; otherwise satisfactory	Yes.
