RECEIVING TENDERS FOR CHILLIWACK SCHOOL BLDG.

School, Chilliwack—Chas. W. Webb, secretary of the Chilliwack school board, is receiving tenders for the erection and completion of school buildings to be erected at Atchelitz and Willis Road, until noon, June 30th.

Plans and specifications may be obtained at the office of Mr. Webb. A deposit equal to ten per cent. of the contract price will be required.

SOME CONSTRUCTION DETAILS ON QUAY WALL

Quay Wall, Victoria—Tenders close at the Dept. of Works, Ottawa, on July 27, for constructing the proposed "Songhees" concrete quay wall at Victoria, est. cost $250,000.

The wall is approximately 1000 feet in length and the area to be reclaimed with a fill to the rear comprises 13 acres. Before the wall is started about 65,000 cubic yards of material must be dredged to reach the foundation levels of the quay.

The construction of the wall proper will be founded on rubble stone at a depth of twenty feet below low water, all heights and depths referring to ordinary low water spring tides in the harbor, Victoria. Wherever rock is found the excavation will be carried down to a depth of twenty-four feet or deeper, as may be ordered during the progress of the work, after which a layer of rubble will be deposited some three feet thick. Over this broken stone will be laid, for a thickness of one foot over the whole of the crib sites, for a width exceeding five feet on each side of the cribs. The surface of the stone foundation will then be made level to receive the cribs. The retaining wall will be built on reinforced concrete cribs, as in the case of the new piers being constructed at Ogden Point. These cribs will be built either on a floating drydock or on a scow without deck, and upon completion will be floated to the site and sunk by means of valves. Valves will be placed in the outer walls of the cribs so that water may be let in for ballast, as required, as ballast for sinking, can be pumped over the top. The cribs will be built in lengths of 80 to 100 feet, the width being 75 feet and the height 25 feet. The outer walls and bottom platform will be fifteen inches thick and the interior walls 10 inches thick. Much steel will be required for the construction of these cribs, as they are to be strongly reinforced.

As the cribs are completed they will be sunk in their respective places on the rubble foundation prepared to receive them, and, with adjoining ends in close contact with each other, will form a straight line from end to end of the wall. After being placed in position, the cribs will be filled with rubble, which will form the foundation of the superstructure.

The superstructure of the wall will consist of concrete molded in alternate sections approximately 30 feet in length. The height of the wall will average 37 feet above the foundation. 17 feet above low water and 7 feet above high water. As a means of protection to the face of the wall, when completed, vertical fenders of creosoted timber, 12 by 12 inches, will be placed on the face every 10 feet, centre to centre, and bolted with wedge bolts. Three wallings, 10 by 12 inches, also of creosoted timber, will be placed butting against the fenders and bolted in position. Placed every 60 feet on the top of the wall will be cast-iron bollards.

The Value of Spare Moments

From every section, and from all sorts and conditions of men, messages come to tell of earnings increased and futures brightened through study of I. C. S. Courses during spare time.

One letter gives the romance of a young man in California that began with little or no education; another tells the story of a high school graduate in Maine that found himself educated for everything but to make a living. Here are the heart-trobs of a fellow that toiled 12 hours a day and studied his Course as best he could; of a foremen or superintendent that enrolled because his ambition aimed at still bigger things.

No matter where you live, how little spare time you have, or how brief your schooling, the I. C. S. can raise your salary. That statement is backed with 20 years of success and a record of 400 or more advancement letters received every month.

I. C. S. Courses have made draftsmen, foremen, and superintendents of shop hands; building contractors, architects, structural and concrete engineers of carpenters and masons; advertising men, window trimmers, chemists, illustrators, and designers of clerks; electrical, mechanical and steam engineers of laborers; mine inspectors, foremen, and mining engineers of mine workers; bridge engineers, surveyors and mappers, civil engineers, gas engineers, automobile runners and civil service employees of young men willing to use their spare time to mold a career.

Suppose you were to increase your earnings only $20 a month—what a fine return that would be on your spare-time investment! Yet some have increased their earnings $250 a month.

Mark and mail this coupon and you will receive free information how you can increase your earnings by spare-time study.
