CANADA COPPER WILL REORGANIZE

Stockholders May Exchange Old Shares for Stock in the New Company

The Canada Copper Corporation now finds itself without sufficient funds to meet its obligations and to carry on its business. Under these conditions a plan of reorganization has been decided on by a readjustment committee. The plan proposed provides for a company to be organized under the laws of the Dominion of Canada or one of its provinces, with a total authorized capital of 2,000,000 shares of no par value or of the par value of $5 each, as the committee may determine, being the same number as the authorized shares of the company. The new company is to acquire all of the property and assets of the old company, and to assume all its obligations.

The plan also provides for the issue of 1.088,209 shares of the new company and the setting aside of 833,333 shares for conversion of first mortgage bonds, leaving 78,458 shares to be held for future corporate purposes.

Under the plan the stockholders have a right to participate on this basis: The payment of 50 cents with each share of stock deposited and surrendered to the readjustment committee under the plan and agreement on or before September 1, 1920, will entitle the owner thereof to one share of stock of the new company, or in the alternative, without any payment, every three shares deposited and surrendered to the committee under the plan and agreement on or before September 1, 1920, entitles the owner to a share of stock of the new company. Half of the payment is to be made on September 1 and the other half on or before October 1 to the readjustment committee.

WINTERING BEES IN THE CELLAR VS. OUTSIDE

Experimental Farms Note.

Whether to winter in the cellar or outside is a question that every bee keeper has to decide. Where the winter is long and steadily cold, the cellar is usually satisfactory, but outside wintering suceeds in some moderately cold places if proper precautions are taken. At the Central Experimental Farm, Ottawa, the two methods have been compared during the last five years. Wintering outside has been done in an apiary protected from wind by a board fence eight feet high, the hives placed in cases made to hold four colonies each with packing material around the sides, beneath, and above the hives. The cellar was a low dry one under the administration building, which was heated all winter. The results have been very close, but outside wintering has brought the colonies forward slightly earlier in the spring.

In the belt where both cellar and outside wintering are about equally satisfactory, the deciding factor appears to be convenience. If the bee keeper has a well insulated and dry cellar, by using it he will save the expense of constructing winteridg cases, and also a windbreak, if this is not present For a few colonies in a cold region, a boarded-in part of the dwelling house basement makes a good cellar for the bees, and it is an advantage if the basement contains a furnace. Such a cellar should have a steady temperature between 42 deg. and 50 deg. F In outside wintering, it is very important to protect the apiary from wind. Outside wintering has the advantage that the bees may be left without attention throughout the winter, whereas in many cellars in the milder parts of Canada the ventilation has to be watched and controlled. Outside wintering has been very successful at the experimental farm at Kentville, N.S., but at the experimental farm at Brandon, Man., the winter has been found too severe for the best results.

For successful wintering, more important than the method is early and careful preparation for winter. For example, one can not expect cellar wintering to be successful if the bees are left outside until zero weather, or if they are brought out very early in the spring. Nor can one expect good results in outside wintering if packing is delayed until cold weather. Neither method will succeed if the colonies do not contain plenty of bees, especially young bees, and, above all, abundance of wholesome stores, preferably clover honey, or syrup made from white granulated sugar, stored in the combs before cold weather. Mice, if they get into the hives during the winter, will ruin the colonies in a very short while.

CROP CONDITIONS ON THE PRAIRIE

Showers have fallen in many sections of the prairie province during the week, and although precipitation in any locality was by no means heavy, there was generally sufficient to materially benefit crops now filling. Rye, barley and early oat cutting is in full swing throughout the west, while harvesting wheat, not yet general, has commenced on a fair scale in Manitoba and Saskatchewan and a few points in Alberta. The livestock situation is satisfactory, and pastures are affording grazing. Hoppers are still causing losses of a minor character.

Death of Mrs. O'Keefe

The death of Mrs. Geo. O'Keefe occurred Saturday afternoon at the Grand Forks hospital of tuberculosis after a prolonged illness. Deceased was 31 years of age, and had been a resident of the city for twelve years. She was the mother of six children, four of whom are living, and she is also survived by her husband. She was a native of Butte, Mont., where her parents and two sisters now reside.

The funeral was held on Monday afternoon, and it was largely attended by friends and relatives of the family of deceased.

OUR FOOD SUPPLY DEPENDS ON BIRDS

Man's Desire for Slaughter Has Altered the Balance of Nature in Animal World

Do we appreciate our birds?

The west is threatened with a grasshopper plague, while in the east the caterpillar is causing havoc among the trees.

Man, with his insatiable slaughter of the birds, has so reduced the balance of nature that the destructive insects are getting the upper hand. Dr. Tolmie, minister of agriculture, in introducing his estimates in the house of commons, stated that Canada's annual loss from parasites amounted to $125,000,000, and that in preparation for the expected grasshopper plague alone there had been purchased 100,000 pounds of arsenic, 2000 tons of bran and 50,000 gallons of molasses with which to make poisoned bait.

To overcome, or at least to minimize, the caterpillar plague various methods are being adopted, chfefly that of spraying.

Recently, a woodpecker was noticed at work upon a tree which was being defoliated by caterpillars. With the aid of binoculars, it was found that in one visit to the tree it secured twenty-four caterpillars. This bird, or another, returned at about quarter-hour intervals, each time disposing of a number or caterpillars.

Birds are the natural enemies of insects and bugs, and without them we could not successfully combat the pests which destroy our food supplies.

By protecting the birds we protect ourselves.

News of the City

Arrangements were made this week whereby the tract of land consisting of nine acres, immediately south of the city, owned by the late W. E. Paterson, was sold to Charles Hook. Consideration $1100. Mr. Hook some months ago came from the prafrie, and after thoroughly investigating the district decided to locate here. He also purchased the house and two lots owned by F. Newbauer, adjacent to the Ruckle addition, and he will improve both properties. Both sales were made through the real estate office of S. T. Hull.

W. J. Galipeau, manager of the Grand Forks Concrete company, left on Wendesday for Trail, where the company has secured a $5000 contract for constructing the concrete foundation of the Presbyterian church.

The option which the Toronto firm of brokers held on city refunding debentures expired last Saturday night. Yesterday afternoon the mayor and the chairman of the finance committee started out to dispose of some of the bonds locally. They report having met with considerable success, having obtained agreements for the sale of $10,000 during the first few hours they were out. The bonds are offered at 91, and Victory bonds will be accepted in payment at the ruling market quotation.

F. W Groves, of Kelowna; Mr Porter, of Vancouver and D. W. Hodsdon, of Victoria, government engineers, have been in the city this week investigating the proposed irrigation system They have made a thorough examination of the different plans proposed, and will meet the irrigation committee tonight before returning to the coast.

Robt. Petrie wishes to know when the parties who took the rocking chair from his residence are going to return it. As they are well known, it would seem to be useless for them to keep it any longer than is absolutely necessary.

Peter A. Z. Pare has been confined to his home this week by an attack of rheumatism.

Chas. Pearson returned Monday evening from a two weeks' vacation trip to the coast cities.

ELECTRICITY FOR THE FARM HOME

Concerted Action by Municipalities Would Provide for Wide Distribution of This Convenience

The necessity for a more adequate supply of electric energy to the smaller communities, particularly in the west, has often been pointed out by the commission of conservation. Concerted action would bring this most beneficial utility to every town, village and practically every farm within reach.

The middle west of the United States is very aggressive in this respect. Central stations are building lines as rapidly as possible, and are planning more for the immediate future. Regarding the construction and cost of these the Electrical World states:

"In general the construction is of two sorts for two very different purposes. The first consist mainly of 33,000 volt and 66,000-volt lines, interconnecting generating stations and taking on new towns or industries. The second consists of 2300-volt and 4600-volt lines, designed to serve groups of farmers and small villages.

"While it is difficult to generalize on prices when the metal markets are so unstable, it may be said that farm lines cost at present from $600 to $800 a mile and the 33,000-volt and 66,000-volt lines cost from $3500 to $4500 a mile. Moreover, the cost factor seems at present to be one of the most important items in determining how long this era of construction may last. Certainly the demand for service will not limit the activity for some to come, especially in the farm-line extensions."

THE ROCK CANDY MILL

The Only Plant of Its Kind on the Continent Has Proved a Great Success

(From the Annual Report of the Minister of Mines.)

The building of this 100-ton capacity mill by the Consoltdated Mining & Smelting company, of Trail, was more or less of an experiment at first, which has been added to and changed according to necessity. The results obtained to date are satisfactory from a concentration stand point and reflect credit upon those who have worked upon its solution.

The fluorite is brought approximately two miles from the mine to the mill over an aerial tram, and then dumped in bins of 250 tons capacity From thence it is distributed by apron feeds through a 20x10-inch Blake crusher and elevated to a trommel screen of one-fourth inch mesh, the oversize passing through two sets of rolls set to three-eighths inch and one fourth inch respectively. All products then pass through a rotary dryer fourteen feet long and three feet two inches in diameter, which is heated by the waste gases from the kilns. This product is again elevated and passed over thrse sets of impact screens, the feed for No. 1 kiln being plus one-fourth inch, No. 2 kiln being minus one-fourth inch or plus No. 8, and No. 3 kiln being minus No. 8 or plus No. 15.

The minus No. 15 makes up the middling product. The smalls from No. 2 screen gives the best result for decrepitation, making a product containing about 2 per cent silica. The rotary kilns are fourteen feet long and three feet two inches wide and make three revolutions a minute. About 1200 deg. Fahr. is the necessary for decrepitation. The middling product contains about 5 per cent silica and is used locally for making acid, and also for adjusting the concentrates to meet specifications. After decrepitation takes place the product is slowly elevated to permit cooling before being finally screened and stored for shipment.

As far as the writer is aware this is the only mill of its kind on the American continent, and the success achieved may be instrumental in solving other problems of a similar nature elsewhere. Sixteen men were employed and 3372 tons milled, which produced 898 tons of concentrates, with an approximate content of 84 per cent CaF_2 and 6 per cent SiO.

For the purpose of organizing a federal Unionist association for the Grand Forks riding, a meeting will be held in the opera house on Wednesday, August 25, at 8 p.m. Prominent Unionist sprakers will address the meeting. All interested in federal politics are invited to attend.

There are 909 voters registered in the Grand Forks electoral district.

FRIDAY, AUGUST 20, 1920

President Wilson's declining years have much of the elements that enter into a tragedy. A year ago his word stood against the world; now none is is so poor or lowly that he can not crack a jibe at his expense. We are not one of those who form hasty opinions, nor do we lightly abandon ideals once embraced. Plato thanked the gods that he lived in the same age as Socrates, We have often been thankful because we are living in the same age as President Wilson. The Athenians put Socrates to death; Socrates still lives. The Americans have all but crucified President Wilson; Wilson will live when the dust of his detractors has been ground to powder.

We notice that some of the federal government's advertisements still carry the footnote, "Newspapers inserting this advertisement without authority will not be paid for it." This seems like a useless expense. The newspaper man who would insert a government advertisement without authority and demand payment for it does not belong in a newspaper office. His proper place is in the penitentiary.

Anyway, the people who complain the loudest about the unreliability of the press are usually the ones who give the press unreliable information.

Wealth is not the real prize of life, it is only a trophy, a symbol, and may carry with it no satifaction; indeed it does not carry with it genuine, lasting satisfaction unless it oas been won fairly, honestly, honrably. The more we see of rich men and the closer our insight into the workings of their minds and hearts, the more strongly convinced do we become that great wealth is no passport to happiness nor proof of success. It is an old truth, but it needs preaching every sunrise, so many people do not know it, or, knowing it, do not heed it. If they could only be made to understand, if they eould only see things in their true colors, if they could only peer into the hearts of many millionaires, they would order their lives more rationally and enjoy life more thoroughly.

The Union of Indianapolis, which describes itself as the oldest union newspaper in the United States, said recently: "Capital vitalizes us—that is most important. Left to our own resources we would have as bad working conditions today as our ancestors did when modern industry was a-borning. Left to itself, capital would have a multiplicity of petty masters, and no capacity to serwe labor. Labor today commands a great price in that serviee that has to do with manual skill or brawn; it takes a larger share of its ultimate value than ever before; it works under beneficient conditions generally. It has broadly the goodwill of the employer, who is much concerned about the health and social and economic welfare of his employees, because he has a fine concept of human rights." If that be true of employers in the United States, we believe it is even truer of employers in Canada. No doubt rhere still are employers in this country who challenge what we have to describe as "the human rights of labor," deny in act if not n word the right of labor to bargain for wages and hours of work, and display the spirit of an industrial autocracy, but they are not numerons and they are censured by their own order as freely as they are condemhed by those whom they employ. But shorter hours and increasing wages require high efficiency in labor and in factory organization if production is to be maintained, and one regrets that the official leaders of labor so seldom appeal for efficiency among workers and so seldom emphasize the necessity for high production in order that wages may not be reduced nor prices to the public increased. Capital only represents wealth engaged in service or available for service, and there could be no greater mistake than to assume that there is a great reserve of idle capital out of which wages may be increased and new levies of taxation met without greater production. As has been said: "There is only one way to prosperity, and that is by increased production, which we shall never get in sufficient measure until capitalists have confidence in the continuance of satisfactory conditions and the workers see that their future prosperity depends, not upon their power to hold up the community to ransom, but on their active cooperation in the creation of wealth."

Business is as much a game as golf or baseball or football. Life itself is aptly likened a game. To win, to earn and enjoy the fruits of victory, you must play fair.

Since the war a problem which has been worrying agriculturists all over the country is that of keeping the boy and girl on the farm. All literature on the subject shows quite plainly that no panacea has been discovered to meet the difficulty in connection with the exodus of the boys and girls from the farms. Most people will agree that we can at least go a long way towards solving the problem by adopting better farm methods; by making the home more attractive; by keeping better live stock; by making more profit on the farm, which will make possible more comfortable conditions such as will be conducive to happiness and contentment; by making conditions toberable for the farmer's wife, and generally by doing everything we can to make life on the farm attractive. In addition to this, good roads and cheap automobiles should play a very great part in helping to keep the young people on the farms by rendring very valuable assistance to the farmer in different ways in connection with his work and by enabling him and his family to move around and mix with the neighbors, thus obtaining some social pleasure out of life.

Football has often been under indictment for roughness and other objectionable qualities, but basket ball, which was designed for girls and younger boys, and which was supposed to be an ideal game for them, is now the object of a sharp attack by educators and physical directors. The head of the department of physical training in the University of Missouri said recently, "In my experience there is no other athletic activity that has produced so many serious bad results as basket ball.' It seems to be time for the friends of the game to modify the rules or to find some other way to rid it of its objectionable characteristics.

Good times for all can only be the product of good work by all.

There must be output before there can be income.

The best reward is sense of worthy achievement.

Defeat is often a spur to victory.

BRITISH COLUMBIA TELEPHONE COMPANY

BRITISH COLUMBIA CROP CONDITIONS

The cherry season is about over and has been one of the most successful seasons for several years, prices having been very staple. Some losses from rotting in transit was noticeable. Bings and Lamberts have been of very fine quality. Sours are moving and bring good prices.

Apricots have been a good crop, but more attention is needed in thinning the early varieties, as they come on the market very small. The extreme hot weather has hastened the picking season

Plums are rolling freely and a good crop of this fruit is expected.

Early apples, Yellow Transparents, are now moving. Duchess are coming on fast, and picking should commonce this week. Wealthys are already taking on color. Late apples are sizing well.

THE WEATHER

The following is the minimum and maximum temperature for each day during the past week, as recorded by the government thermometer on E. F. Laws' ranch:

		Max.	Min.
Aug.	13—Friday	99	56
	14—Saturday	97	59
	15—Sunday	96	54
	16—Monday	94	55
	17—Tuesday	65	58
	18—Wednesday	69	52
	18—Thursday	82	42

Ask Dad--He Knows

"How do they condense milk, father?"

"Oh, they just take ordinay milk, you know, and—er—put it into someting—and—er—condense it."

Instruction for the Young

Yells from the nursery brought the mother, who found baby gleefully pulling Billy's hair.

"Never mind, darling," she comforted. "Baby doesn't know how it hurts."

Half an hour later wild shrieks from the baby made her run again to the nursery.

"Why, Billy," she cried, "what is the matter with baby?"

"Nothing, mother," said Billy, calmly; "only now he knows."

John G. Whittier's Wit

One day I was calling on Whittier. While there an agnostic collegian from Harvard expressed doubt about the authenticity of the Bible.

"I don't believe in things I have not seen," he said.

The poet looked at him qnizzically a moment and remarked:

"Then thee does not believe in any thing unless thee or thy friend have seen it?" "No, sir. I do not."

"Did thee ever see thy brains?" "No"

"Does thee know of anybody who has ssen thy brains?" "No."

"Does thee believe thee has any?" said the Quaker poet, his face all smiles.

Two well pressed women called on a rather hard-up neighbor.

One of the women commented on her hostess' dress, making the poor little woman blush with pleasure.

When the call was over and two friends were outside one said crossly:

"Why did you call that thing Mrs Blank had on 'a creation?' It wasn't new, to say the least."

"I know. That's why I called it a creation. It was about as old as that."

O, Yes, Indeed

She—Tom's just bought a Ford—what's yours?

He—Oh, mine's a Rolls Boyce!

She—Ah! That's a good car, too, isn't it?

The Sun is a $2 newspaper sold at $1 per year.

The grocer saw his best customer was a bit ruffled over something, so strove to be extra obliging and pleasant. "I think," he said blandly, "living is getting cheaper. For instance, a year ago them eggs would have cost you 5 cents more" "A year ago," said the customer, "when these eggs where fresh, they would have been worth more."

Teacher—This makes four times I've had to punish you this week. What have you to say that?

Bobbie—I'm glad it's Friday.

THE SUN

Columbia Avenue and Lake Street

TELEPHONE

R 101

Job Printing at The Sun office at practically the same prices as before the big war.

If you don't see it in The Sun it didn't happen, or it wasn't worth mentioning.

Synopsis of Land Act Amendments

Minimum price of first-class land reduced to $5 an acre; second-class to $2.50 an acre.

Pre-emption now confined to surveyed lands only.

Records will be granted covering only land suitable for agricultural purposes and which is non-timber land.

Partnership pre-emptions abolished, but parties of not more than four may arrange for adjacent pre-emptions with joint residence, but each making necessary improvements on respective claims.

Pre-emptors must occupy claims for five years and make improvements to value of $10 per acre, including clearing and cultivation of at least 5 acres, before receiving Crown Grant.

Where pre-emptor in occupation not less than 2 years, and has made proportionate improvements, he may, because of ill-health, or other cause, be granted intermediate certificate of improvement and transfer his claim.

Records without permanent residence may be issued, provided applicant makes improvements to extent of $200 per annum and records same each year. Failure to make improvements or record same will operate as forfeiture. Title cannot be obtained in less than 5 years, and improvements of $10.00 per acre, including 5 acres cleared and cultivated, and residence of at least 2 years are required.

Pre-emptor holding Crown grant may record another pre-emption, if he requires land in conjunction with his farm, without actual occupation, provided statutory improvements made and residence maintained on Crown granted land.

Unsurveyed areas, not exceeding 20 acres, may be leased as homesites; title to be obtained after fulfilling residential and improvement conditions.

For grazing and industrial purposes areas exceeding 640 acres may be leased by one person or company.

Mill, factory or industrial sites on timber land not exceeding 40 acres may be purchased; conditions include payment of stumpage.

Natural hay meadows inaccessible by existing roads may be purchased conditional upon construction of a road to them. Rebate of one-half of cost of road, not exceeding half of purchase price, is made.

PRE-EMPTORS' FREE GRANTS ACT.

The scope of this Act is enlarged to include all persons joining and serving with His Majesty's Forces. The time within which the heirs or devisees of a deceased pre-emptor may apply for title under this Act is extended from for one year from the death of such person, as formerly, until one year after the conclusion of the present war. This privilege is also made retroactive.

No fees relating to pre-emptions are due or payable by soldiers on pre-emptions recorded after June 26, 1918. Taxes are remitted for five years.

Provision for return of moneys accrued, due and been paid since August 4, 1914, on account of payments, fees or taxes on soldiers' pre-emptions.

Interest on agreements to purchase town or city lots held by members of Allied Forces, or dependents, acquired direct or indirect, remitted from enlistment to March 31, 1920.

SUB-PURCHASERS OF CROWN LANDS.

Provision made for issuance of Crown grants to sub-purchasers of Crown Lands, acquiring rights from purchasers who failed to complete purchase, involving forfeiture, on fulfillment of conditions of purchase, interest and taxes. Where sub-purchasers do not claim whole of original parcel, purchase price due and taxes may be distributed proportionately over whole area. Applications must be made by May 1, 1920.

GRAZING.

Grazing Act, 1919, for systematic development of livestock industry provides for grazing districts and range administration under Commissioner. Annual grazing permits issued based on numbers ranged; priority for established owners. Stock-owners may form Associations for range management. Free, or partially free, permits for settlers, campers or travellers, up to ten head.
