Kelowna, B. C.
10th June, 1929

J. L. Logie, Esq.,
Manager, Okanagan Centre Irrigation and Power Co.Ltd.
Okanagan Centre, B. C.

Dear Sir;-

I enclose herewith an order for the supply of water to licensees on Duck Lake Creek. You will recall I wrote you on May 14th last in the anticipation of the necessity for this arising.

For your consideration I would suggest that some of the users could be supplied from the scour valve in your syphon at Duck Lake creek syphon crossing. This would not however supply water for Messrs Powley, Patterson, Koyama and Pearson.

Pumping water from Duck Lake is suggested, also obtaining it by ditching, and I would recommend this source for your investigation. Obtaining water from Duck Lake would be the most economical method for you, as by so doing you would be saving water in Beaver Lake.

Any work done at Duck Lake outlet would have be be done of course with the consent of the Indian Agent. I have previously mentioned this possibility to him, and there should be no trouble in getting permission.

Yours truly,

(Signed) O. F. D. Norrington

District Engineer.

OFDN.
