## RICH STRIKES OF COPPER ORE

### Important Find on Spoke at Aspen Grove—Good Ore on Johnson Claim, Copper Mt.

Mr. T. Sloan, who returned a few days ago from Aspen Grove camp, reports the finding of an immense ore body on the Spoke claim, belonging to Messrs. Budd, Aldous, and Roberts.

This claim is one of a group belonging to the above-named parties, which consists of the Joe Dandy, Red Bird, Gold Bug, Spoke, and Snowshoe.

It was staked a little over a year ago as an extension to the Red Bird and a small lead was found, on which last year's assessment work was done. The new ore-body recently discovered is said to be from 20 to 30 feet wide, and traceable the full length of the claim.

Specimens of the ore exhibited in town are extremely rich in copper; glance, and judging from appearances would carry easily 20 per cent. of the red metal.

The story of the discovery of the new lead is told as follows:

The owners of the group have a force of 5 men at work doing assessments. Mr. Budd, who is one of the owners, hurt his hand in some way and was unable to work, so in order to get in time, took a pick and started to prospect some of the ground they had located, with the result above recorded.

The Hub claim belonging to McIntyre and McDonald, which has also a fine showing, adjoins the Spoke.

THE JOHNSON CLAIM ON COPPER MOUNTAIN.

Messrs. Willarson and Johnson made a good strike recently on the Johnson claim while doing assessment work.

In sinking on a small stringer of magnetic iron showing a little copper stain on the surface, they uncovered a lead of very fine copper ore.

At a depth of 12 feet the 5 x 7 shaft was entirely in ledge matter, with an exceptionally rich shoot of copper pyrites and black oxides of copper, over two feet wide.

Another shaft 8 feet deep was sunk at a point further along the vein, with the result of proving the further continuance of the ore body for some distance.

The owners have also been doing work on the Ada B., Ada B. Fraction, and Centre Star claims, and Mr. Willarson reports the finding of a second lead on the Ada B., which he judges to be between 20 and 25 feet wide. The Ada B. is already known as one of the banner properties of Copper Mountain, and this last find should greatly enhance its value.

No. 1 lead, on which the principal work has been done is 60 feet wide. Average assays taken from the shaft show the ore to run between $10 and $15 in gold and copper, while picked specimens run as high as 15 per cent. copper and $13 in gold.

A shaft 10 feet deep was sunk and an open cut with a 12 foot face was run on the No. 2 lead and the excellent specimens of native and yellow copper shown, bear testimony to the grade of the ore found.

Work on the Centre Star has been confined to the running of a series of open cuts for the purpose of exposing the ore body.

### LOCAL AND PERSONAL.

H. Cleasby of Coutlee, visited town Monday.

Dr. Whillans left on the stage Sunday for Kamloops.

Ben. Baker left on Tuesday for Stirling Creek, where he intends to prospect for a short time.

E. Sterz, representing the Imperial Brewing Co., of Kamloops, came in Thursday from Penticton.

Murdoch McIntyre of Aspen Grove, made a short stop in town Thursday, on his way back to the Boundary.

I. Laugheed went up to Boulder Creek Monday, and returned Thursday. He reports things quiet in that camp.

T. Hunter drove in from Nicola Wednesday, bringing in S. D. Birly, traveller for J. W. Peck & Co., Vancouver.

Messrs. A. MacDonald and M. J. Quinlivan, railway contractors of Grand Forks, drove in on Thursday from Keremeos.

Complaints are being made to the Minister of Mines to the effect that the 8 hour law is being disregarded in two camps adjacent to Princeton.

A meeting will be held in the McIntosh Hall, Saturday, June 28th, at 3 p.m., for the purpose of organizing a branch of the Settlers' Association of British Columbia. All interested in the matter are requested to attend.

### KELLY CREEK.

Holmes and Johnson have completed their second assessment on the Monte Carlo claim. They have been working on a lead of white quartz showing large quantities of iron pyrites and a little galena. The vein is about 2½ feet wide, and assays $28 in gold with small silver values.

The Monte Carlo is located about four miles up from the mouth of Kelly Creek.

SILVER QUEEN.

Assessment work has also been done on the Silver Queen claim. An open cut 14 feet long was run on a lead of white quartz, similar in appearance to that of the Monte Carlo. The vein was only eight inches wide where the work was begun, but has widened until it measures 26 inches in the bottom of the cut. The Silver Queen belongs to Mr. Robt. Stevenson.

### THE RIVAL CLAIM.

Mr. Robert Stevenson has finished assessment work on the Rival claim, situated about six miles from Princeton, down the Similkameen river.

The work consists of a 12 foot open cut. The lead is about 8 feet wide, and average assays give 5 to 6 per cent. in copper and $4 to $8 in gold. Mr. Stevenson expresses himself as well pleased with the improvement shown as the result of the work done.

The Rival adjoins the Rob Roy which has also a good showing of ore.

### HOTEL ARRIVALS.

HOTEL TULAMEEN, PRINCETON.

W Davis, Wolf Creek; D McPhail, F P Cook, Granite Creek; H Cleasby, Coutlee; M McIntyre, W Bailey, Aspen Grove.

## PLATIMUM ON ONE MILE CREEK

### Miss Dundas Claim Owned By D. Coutney Assays Well in the Precious White Metal.

Following the discovery of platinum in ore on Kennedy and Wolf Mountains, comes the report of the finding of this precious metal on a claim called the Miss Dundas, belonging to Mr. D. Coutney and situated on One Mile Creek, about three miles north east of Princeton. We publish below a letter from the Waratah Minerals Co., Ltd., of Philadelphia, Pa., dated Feb. 13, 1902, which is self explanatory:

MR. DANIEL COUTNEY,
Olalla, B. C.

DEAR SIR,—Having analyzed your samples No. 1, Legal Tender; No. 2, Miss Dundas, and No. 3, Cream of Camp, sent to us on the 8th of January, we find that Nos. 1 and 3 contain traces of platinum metals, and that No. 2 is quite rich in platinum metals. In fact, so rich that we feel sure it will pay you to concentrate some of this ore, and notify our representative in San Francisco, Cal., Col. W. P. Butler, so that he can make arrangements for the purchase thereof.

Very truly yours,
THE WARATAH MINERALS CO., LTD.

Mr. Coutney also has a letter of more recent date from the same company advising him that their field representative will be in this district shortly for the purpose of examining the leads from which the platinum assays were obtained.

From all appearances the fame of the Similkameen as a mining country will not depend entirely on its coal and copper deposits. The finding of rare metals in quantities that make possible their profitable extraction cannot fail to attract the attention of the mineralogists of all countries.

### FIRE GAS FOUND.

The operator at one of the diamond drills now at work between the Tulameen and Similkameen rivers, reports the finding of large quantities of carburetted hydrogen gas in one of the drill holes. This gas is commonly known as fire gas, and is found in connection with many coal deposits. On account of it igniting very readily, it has been responsible for many coal mining accidents.

On Sunday there will be service at Ashnola at 11 a.m., and at Princeton in Mr. Mason's house at 7:30 p.m. Sunday school at 3 p.m. On the following Sunday service will be held at Granite Creek.

## THE RAILWAY BILL.

The bill providing for the construction of the Coast-Kootenay line has passed its third reading, and now needs but the signature of the Lieutenant-Governor. Because of the great and immediate necessity for the road, a number of the opposition members who were very much opposed to the terms of the contract, voted with the government. Smith Curtis opposed the bill on the ground that it was a C. P. R. scheme to still further delay the building of the line. He objected to the length of time allowed the contractors in which to commence construction; the lack of any provision for government control of rates; and the failure of the administration to stipulate that the road should be operated as a competitive line free from C. P. R. control. Mr. Curtis' objections to the contract were quite justified.

The vacillating policy of the government on the railway question, and its evident desire to sacrifice the people for the benefit of the corporations, has destroyed all public confidence in it, and the quicker it steps down and out the better for British Columbia. Few will be the tears shed at its burial.

## PROSPECT CLOSELY.

The strikes announced this week on our front page—one at Aspen Grove and the other on Copper Mountain—serve to emphasize the need for close and careful prospecting of claims and the advantage of doing a little work, where possible, wherever indications of an ore body are found. Some of the very best claims in the district have been located merely because of their proximity to other showings.

In many cases the ore bodies that afterwards made them well known were not discovered till some time after.

Every season brings some fresh instance of work being done on what was considered an inferior surface showing, with the result of proving the existence of a promising ore body.

A number of the early prospectors in the Boundary worked on the theory that if a lead had good ore in it, it would crop to the surface somewhere, so in place of sinking expensive shafts they sought to develop their claims by open cutting their lead in a great many places.

Some of the most successful pioneer prospectors of the Boundary district proved their properties in this way.

## EXCHANGE COMMENTS.

We've got the champion freak legislature of the universe. The other day the leaders of the opposition moved a vote of confidence motion in Mr. Speaker, which was rejected by the government.—Vancouver Independent.

Premier Dunsmuir wants to go to London to represent the people of B. C. at the Coronation. This is a new role that our worthy James should not assume without rehearsal. His Victoria experience as the representative of J. Dunsmuir, grafter, unfits him for any such commission.—Vancouver Independent.

## NOTICE.

THIRTY days after date we intend to apply to the Chief Commissioner of Lands and Works for a license to prospect for coal on the following described lands:—

On the east bank of Nine Mile Creek, about 7 miles from Princeton.

Commencing at initial post and running 80 chains west, 80 chains south, 80 chains east, 80 chains north, back to post, containing in all 640 acres.

CHAS. POWELL.

Located June 14, 1902.

Commencing at north east corner of Chas. Powell's coal location and running 80 chains south, 80 chains east, 80 chains north, 80 chains west, back to post, in all 640 acres.

ISAAC LAUGHEED.

Located June 14, 1902.

Commencing at the north east corner of Chas. Powell's coal claim and running 80 chains north, 80 chains west, 80 chains south, 80 chains east, back to post, in all 640 acres.

BENJ. BAKER.
CHAS. POWELL, Agent.

Located June 14, 1902.

Commencing at north east corner of Chas. Powell's coal location and running 80 chains north, 80 chains east, 80 chains south, 80 chains west, back to post, in all 640 acres.

F. N. HAM.
CHAS. POWELL, Agent.

Located June 14, 1902.

Commencing at north east corner of Baker's coal location and running 80 chains west, 80 chains north, 80 chains east, 80 chains south, back to post, in all 640 acres.

H. A. WHILLANS.
CHAS. POWELL, Agent.

Located June 15, 1902.

### Small Investor's Chance.

In times gone by when mining was theoretically, in its swaddling clothes and practically crude, speculation was rife and all mining was placed on a level with gambling while it is now a specialized science and scientifically carried on, former impressions die hard and only education of the general public can place the mining industry of the present in its true light.

The man of moderate means; the small merchant with a few hundreds of surplus capital, the clerk and the mechanic with their savings and the retired business man or farmer with idle money, have been too prone to look upon mining propositions as the gambling games of the rich, in which their modest investments would be quickly swallowed as pocket money by the mine promoters.

That this has been the case in the past, and still is to a small extent at present, cannot be denied, yet for several years mining has been on so high a commercial plane that among those familiar with it the old standard has been forgotten.

The true safeguard of the industry is the small investor, for a multitude of them insure honesty and honest and direct methods without danger of stock-jobbing and the use of trickery and deception in promoting stock-jobbing operations.

In recent years the west has produced many fortunes from modest investments in its mining enterprises, the majority of its present great consolidations having been made possible and opened up almost solely through capital aggregated in individually small amounts.

Of the hundreds of stockholders each contributes to the limit of his ability or of his faith, one a hundred dollars, some five hundred some perchance no more than ten, fifteen, twenty or twenty-five dollars, in the proportion of riches, one spends 25 cents for a meal when another pays a Delmonico or a Sherry dollars for a dinner, and each shares proportionately in the benefits.

The past five years has seen the rise of many stocks that were floated at three, five, ten, fifteen, twenty and twenty-five cents on the dollar, to a paying basis, which means today that the stock is held and quoted above par. Some of these stocks are worth and held at twice their face value and over.

It is certain that all do not make money who invest in mines. Yet is there any business that is without its particular risks and chances of failure? No business can show equal returns with mining. When the practical end of the proposition is in the hands of practical miners and the financial end in charge of proved and capable business men and both are themselves financially interested in the company, the probabilities of a loss are reduced to a minimum. In all such cases losses are of proved rarity, while gains have time and again been shown to be immense, in many instances stupendous would more accurately express the case. In all these instances the small investor with his one hundred to a thousand or more has shared proportionally with the "bloated bondholder."—Journal for Investors.

### Judge Murphy in Vancouver.

Judge Murphy, of Princeton, was a guest at the Leland last week, being on his way to the Capital after the Similkameen section of the numerous new railroads that are ordered. The Judge takes the record for addressing intelligent audiences, as it is his invariable custom, on account of his Hibernian ancestry, to wind up an address by stating that "this is the most intelligent audience that I have ever had the honor of addressing." The Similkameen is in a general way prosperous says the Judge, but is badly handicapped for transportation. This great mining country will, we trust, before very long be in communication by rail with the Coast cities.—Vancouver Ledger.

### Haspirated Haitches.

A Yale professor was one day recently walking along one of the streets of an English suburban town, when he was arrested by the angry voice of a cabby, who was using some very abusive language towards his "'orses." Stopping to investigate the trouble, the cultured professor was less horrified by the storm of invective than by the atrocious way in which the man was dropping his "aitches." He apparently bore it as long as he could, and then approaching him, and laying a kindly hand on his arm, said, beseechingly: "My dear man, why don't you aspirate your 'aitches?'"

The cabby turned, glared at him for a moment, and then broke out with: "I do haspirate my haitches, you hignorant hold hass."—Toronto News.

Willie—Papa, if I was twins would you buy the other boy a banana, too?

Papa—Certainly, my son.

Willie—Well, papa, you surely ain't going to cheat me out of another banana because I'm all in one piece?—Judge.

## AT UNDER $3.00 PER TON.

### Mr. Graves Says the Cost of Getting Out and Treating Granby Ore Would Soon Be Within That Figure.

A reporter in Spokane recently interviewed Jay P. Graves in regard to costs of mining and smelting by the Granby Co. Here is what was published in the matter:

"I believe that before a great while we shall be able to mine and to smelt the Granby ores for $3 a ton," said Jay P. Graves, general manager of the Granby properties.

"Do you mean that you will be able to handle ores running in value as low as $3 a ton?" Mr. Graves was asked.

"No, I do not," he answered. "The item of $3 will not include the cost of refining nor of marketing the product, and I do not care to say what the expense of those items is. The $3 figure will include mining and smelting.

"We are steadily effecting economies in the cost of treating our ores. Coke is now costing us $6 a ton, delivered. I understand that the Northport smelter is obliged to pay $10 a ton for its coke, as it is unable to secure coal supplies from the Crow's Nest pass fields. The difference of $4 a ton which we have secured is a very material advantage."

NOT UNEASY OVER COPPER.

"I am not uneasy over the outlook for copper. The surplus stock has been almost completely consumed, and the users of the brown metal have been living almost on a hand to mouth basis. The present low price of copper, ranging between 12 and 12½ cents per pound, is conceded to be manipulative, and under normal conditions it will soon right itself. I think that the price will be steady somewhese between 14 and 16 cents, and I look for a recovery in values in July. Whether or not the warring copper interests get together, the price of copper is sure to advance in response to the enormous demand for it, and we are already witnessing signs of that advance.

"Every business building, every manufactory, every ship, particularly every dwelling now uses copper in greater or less quantities for electric wiring. The use of copper in the electrical art is extended to Europe, which, aside from Germany, made little progress until lately in electricity.

"The consumption in the past year has been something like 10 per cent. more than the production. The enormous drain on the surplous stocks has wiped them away, and higher prices for copper are almost inevitable."

### Uses of Platinum.

The Provincial Assay Office of Ontario, located at Belleville, gives the following particulars regarding the uses of platinum:

It is used in the lighting bulbs of incandescent electric lights, for the points of induction coils, sparkers, &c., and for the making of points on gold pens.

An enormous quantity is used in chemical works in the shape of platinum stills, parting dishes for gold and silver, wire, crucibles, pans, etc., being employed also for similar purposes in dye works, sugar refineries, iron works, &c.

A very considerable quantity is used in photography, making the finest quality of photographs which do not fade, known as the platinum finish.

The use of platinum for this purpose has grown so extensive that laws are being agitated in Germany at present to stop its use for this purpose, as it causes the price of platinum to rise considerably thereby, preventing its more common use in chemical works.

The Granby Smelter was offered the contract to treat 650 tons of Australian matte monthly. The fame of this converting plant has extended to the Antipodes.

Only 73 bodies of miners killed in the Fernie coal mine have been recovered. The Western Labor Union convention at Denver has appropriated $3,000 for the relief of families made destitute by the disaster.
