Vol. 10. GREENWOOD, B. C. FRIDAY JUNE 22, 1906. No. 42

## A Striking Feature of this store

is its absolute guarantee of satisfaction with every purchase large or small. It is our aim to give everyone their full money's worth. We call special attention to the offerings for this week.

**Their Exceptional**

**At 15 cts.**

We will sell children's plain or lace hose, all sizes, tan and white, regular 20c to 30c.

**At 25 cts.**

We will sell Ladies plain or embroidered hose, black only. Regular 35 cts.

**At 75 cts.**

We will sell 7 yards of fine print, dark and light colors, good patterns.

**At $1.00**

We will sell 9 yds shirtwaist Gingham. Regular 15 cts yard.

**25 per ct. Discount**

on all our ladies silk belts. A beautiful assortment of these to choose from.

Blouses all at a great reduction.

Extra special value in Ladies white wear.

The Hunter-Kendrick Co. Ltd.

THE BIG STORE

REGINA PRECISION WATCHES ABSOLUTELY GUARANTEED

Green-wood **A. Logan & Co.** Mid-way

Official Agents.

## BONDS THE B. C. MINE

### Valuable Property Acquired by Local Company.

### WORK HAS BEEN STARTED

**Development Will Be Vigorously Pushed,--Former Shipments Totaled Over 100,000 Tons.**

Another important mining deal was concluded last week when the B. C. Copper Co. secured the B. C. mine in Summit camp.

This mine, which has been standing idle for over two years, has at last passed into the hands of a company that has the means and the facilities for developing it to an extent that will prove profitable both to themselves and to the people of Greenwood. The B. C. is known to be one of the highest grade copper mines in the district, former shipments having run 8 per cent in copper. During the years from 1900 to to 1903 over 100,000 tons were shipped and the mine was worked profitably.

Men were started Monday morning pumping out the water in the shaft, and after a thorough cleaning up development work will be vigorously pushed, and by the time the smelter is ready to resume operations the mine will be ready for large shipments.

J. E. McAllister, manager for the company, stated that the property would be worked more extensively in the future than it had been any time time during the past. He refused to divulge the amount of the bond, but said the street reports were a little off the mark.

## LABORER KILLED

G. Narbiato, an Italian laborer, met with an accident last Saturday at the B. C. smelter which terminated his career. He was engaged in removing granulated slag when a piece of hard slag fell and struck him on the head, fracturing his skull. The injured man was removed to the hospital, where the attending physician did all in his power to save the victim's life, but without avail, and the man died a few hours later. An inquest was held on Monday at which a verdict of accidental death was returned by the jury.

### NICE TALK.

It is just like going to church to read The Nelson Canadian.—Greenwood Ledge.

Yes, and it's just like going to —— to read the Ledge.--Nelson Canadian.

## WOMAN FINED $250

**Plaintiff in the Case Gets Heaviest Sentence.**

William Birrell the young man who was under arrest for issuing worthless checks, was tried before Judge Clement of Grand Forks, Thursday morning. Birrell had been a frequenter of a Gold street house and had there given checks in payment for liquors. These checks were found to be worthless and the holder laid a charge against Birrell. At the trial he was found guilty and sentenced to 60 days at hard labor.

In the course of the court proceedings justice took a peculiar course. The woman who laid the charge swore in her evidence that she had sold Birrell intoxicating liquors. The judge asked her if she had a license for the selling of liquors to which she answered no. His lordship straightway laid a charge of violating the liquor license law and imposed a fine of $250 or six months in jail. The fine was paid.

## MURDER AT FERRY

**Brutal Crime Committed by a Drunkard and Gambler.**

A brutal murder occured in Ferry last Tuesday when a woman connected with one of the dance halls there was kicked and beaten to death by a saloon frequenter and blackjack gambler known is "Kid" Rogers. The two began quarrelling in the Ferry hotel and the fracas ended in the death of the woman and in the villian giving himself up to deputy sherriff MacGregor of Ferry. An inquest was held Thursday behind closed doors and the murderer taken to Republic Friday where he will be tried before the county court.

Feeling in Midway and Ferry ran high and the people openly threatened to take the law into their own hands and lynch the criminal and for a time it looked as if the threat would be carried out. Lawless disorder was prevented, however, by the prompt and decided action of the deputy sheriff who stationed himself before the prison door and with loaded rifle guarded the prisoner from the vengeance of the enraged populace.

## SCOTTISH CONCERT

**Popular Entertainers Will Appear in Methodist Church.**

Miss Nannie Strachan and Gavin Spence, the Scottish entertainers, will be presented in the Methodist church next Thursday night. Of their concert given in Winnipeg the Free Press says:

"In everything that goes to make a high class, instructive and enjoyable evening, the programme furnished last night by Miss Nannie Strachan was certrinly replete. Given under the auspices of the North Star lodge No. 2, I. O. O. F., the Y. M. C. A. hall was packed to overflowing by an appreciative audience who demanded an encore after every item on the program.

Winnipeg has had the repuation of having a goodly share of Scottish entertainments, but none were equal to the standard of last night. Miss Nannie Strachan, although a stranger to Winnipeg, was received with an enthusiasm rarely accorded an artist under similar conditions. Petite, modest, fascinating in her natty highland costume, she disarmed criticism the moment she appeared on the rostrum. But when she started "The Scottish Blue Bells" her audience awoke to the fact that no ordinary concert singer was before them. For tone, quality, flexibility and vocalization she stands unequalled in the realm of Scottish song. The "The Coming Thro' the Rye" was a revalation, and the "Calla Herrin" sent the audience into ecstacies. The duet "The Crokit Bawbee" gave her the necessary opportunity to display her dramatic ability, and this number was probably the most popular of the whole program.

"Gavin Spence must be seen and heard to be fully appreciated. Full of a dry humor, he kept his hearers in fits of laughter when telling jokes and stores which had the merit of originality. His rendering of "Jessie's Dream" and the "Hundred Pipers" was par excellence, and the many lucid explanations he gave of the origin of the songs sung were welcomed alike by all

## COBALT DISCOVERED

### Valuable Ore Found On Wallace Mountain.

### DUNCAN RICH IN SILVER

**Remarkable Specimen Found.—Rich Ledge in Bounty Fraction—West Fork Attracting Attention.**

Local interest in the West Fork mines has been greatly increased this week by some fine samples of ore that have been brought in from that district. It has long been believed that Wallace mountain would yet yield high values in precious minerals, but some recent finds have exceeded the most sanguine expectations. A sample of Jersey mine ore was brought in to the local assayer, A. Harry Hook, for analysis for gold, has proved to be not only rich in that precious metal, but was found to be rich in cobalt, a precious mineral used largely in making fine art colors and worth fifty cents per pound.

RICH SILVER ORE.

One of the finest specimens of silver ore ever exhibited in Greenwood was brought in on Tuesday from the Duncan mine, West Fork. It is about the size of a cup, with one side thickly covered with silver resembling silver wire. The specimen is very rich and would run hundreds of dollars to the ton. The Duncan is one of the high grade silver-lead mines of Wallace mountain and is owned almost exclusively by local parties. Among others interested are Hon. W. S. Fielding, Kenneth McKenzie, S. E. Belt, B. Snyder, L. E. Rolley, Alf. Lind, Duncan Currie and Thomas Henderson.

The specimen was secured from the winze in the drift some 70 feet from the surface. The ledge from which it was taken is 23 inches wide and has run $263.64 per ton. The drift is in some 75 feet along the line between the Duncan and the Bounty Fraction, now under bond to the owners of the Duncan. The winze is being sunk at a point about 50 feet from the mouth of the drift, and another drift will soon be started lower down the hill to give greater depth.

NATIVE SILVER.

The ore is a mixture of quartz, galena, zinc blend, iron pyrites, with native silver. A staff of five men have been engaged continuously on development for over a year, and the lead has been tapped at various points by open cuts and shafts for over 1,500 feet and shows good values throughout. The assays were all taken from ordinary samples of ore and the lowest ran $75 per ton, while the average was much higher, and the ore now being produced will run over $263 per ton. Considerable ore has been mined and a shipment will be made early in July. It is the intention of the owners to fully develop the property, and with the advent of railways up the North Fork the value of the mine will be greatly enhanced.

BOUNTY FRACTION.

Work is also being vigorously pushed on the Bounty Fraction. A drift is being run on the ledge. A vein 14 inches wide has been opened up and values have run $336.60 per ton. This also promises to prove a proposition of great and lasting value.

COBALT ORE.

Harry Wright of West Fork, was in the city this week with some fine samples of ore from the Jersey claim, which adjoins the Napanee on Wallace mountain. Under assay the ore ran $22 per ton in gold and was found to be rich in cobalt. It is from a ledge eight inches wide, which Mr. Wright has opened up thirteen feet from the surface. This is the first cobalt ore recorded from the West Fork and will encourage prospectors to search for this highly valuable mineral. Mr. Wright is pushing the work on his claim as rapidly as he can single handed. He is the sole owner of the Jesery, but is open to make an attractive proposition to anyone taking a working interest.

RENDELL & CO.

## Our Prices Sell The Goods

OUR stock of staple and fancy dry goods for spring and summer is now complete, and we venture to say that it is the largest and most comprehensive ever shown in Greenwood.

IN Embroidered Lawn and Linen Waists we are particularly strong, all the latest styles and designs shown. In Silk Waists we are showing some extra nice values.

OUR Ready-to-wear department is very complete, our assortment of Mohair and Tweed skirts is particularly attractive.

IN Children's goods we have a nice range, some extra good values in Sailor and Buster Brown dresses. Come in, examine and be convinced.

A very dainty showing of Embroided Lawn and Linen Waists, long and short sleeves. From $1.50 to $5.00.

A very fine range of white and cream wash Silk Waists. Great values from $3.50 to $5 Ladies fancy and white Sunshades. We have a very large assortment from $1.50 to $5.00.

Our stock of Mohair Skirts is large, all styles and prices from $3.50 to $6.00

A nice line of children's dresses, Sailor and Buster Brown styles in Print, Gingham and chambray, from 45 cts to $1

We have a particularly fine range of children's sunshades, from 35 cts to 1.50

RENDELL & CO.

## PROSPECTOR'S GUIDE

### A Classification and Description of the More Common Minerals.

(By A. Harry Hook, Assayer.)

(Continued from last week.)

[This week the "Prospector's Guide" is devoted to a classification and description of those minerals bearing a non-metallic luster. Last week the minerals described were those having a metallic luster. Prospectors and others interested should cut these articles out and keep them for future reference. Back copies can be had at the Times office. Anyone wishing to have a mineral identified can do so by leaving a sample at the Times office. Next week this column will be devoted to a description of the more important silver minerals dealing with those of most local interest.]—Ed: note.

II.—MINERAL HAS A NON-METALLIC LUSTER.

(A) Streak distinctly colored.

1. Streak brown or yellowish:

Not scratched by knife, colors brown black, red or gray, reduced to metallic tin with soda or charcoal. Cassiterite (tin stone).

Scratched by knife, resinous luster, colors yellow, brown and black. Sphalerite (zinc blende).

Very distinct yellowish streak, becomes magnetic by heating on wood or charcoal, surface has an earthy appearance, color brownish yellow or ocher yellow when earthy, brown sometimes with nearly black varnish like exterior Limonite (bog iron ore).

Colors whiteish to brown and gives the blue coloration when after being heated on charcoal, specimen is moistened in cobalt nitratesol and reheated, Bauxite (source of present aluminum supply).

2. Streak red, magnetic when heated on charcoal in R. F.; distinguished from magnetite by its red streak, also from simonite by same means. Hematite (iron ore).

3. Streak red, heavier than hematite and does not become magnetic when heated on charcoal, color cochineal-red inclining to brownish-red and lead gray. Cinnabar (mercury sulphide).

4. Streak brownish red, shining, color cochineal red to black, blue borax bead. Cuprite (copper oxide).

5. Streak pale green, color green, effervescence in acid, gives blue borax bead. Malachite (copper carbonate).

6. Streak pale blue, color azure blue, gives blue borax bead. Azurite (copper carbonate).

7. Streak pale green, color bright apple green to nearly white, very light in weight. Garnierite (nickel ore).

(B) Streak white or faintly colored.

(a) Not scratched by knife.

1. Cleavage, none or indistinct:

Vitreous, colorless to amethystine and black, scratches glass. Quartz.

Vitreous, black, dark brown or green colors, in triangular prisms, often striated and broken. Tourmaline.

Commonly dark red or brown, generally in isolated rounded crystals, luster vitreous or resinous. Garnet.

Luster, adamantine, colorless, often yellowish green to reddish brown. Zircon.

Luster vitreous to greasy, color white or yellow; when massive, dark green or red; gelatinises with acid; this distinguishes it from feldspar, apatite and scapolite. Nepheline.

2. Cleavage very distinct.

1. Vitreous or pearly, white, grey, green, etc. Verp perfect cleavage.

1 (a) Softer than quartz. Feldspar.

1 (b) Harder than quartz. Corundum.

2. Vitreous, black, brown, greenish-white or colorless, cleavage not so perfect. Horndeblende.

3. Opaque, blue, cleavage often very indistinct, luster vitreous. Sodalite.

4. Brown, etc., resinous luster, wedge shaped crystals. brittle. Titanite (or sphene).

5. Usually yellowish green color, luster vitreous. Epidote.

(b) Scratched by knife:

These yield no water in open or closed glass tube.

1. White, grey, etc., soft, remarkable rhombohedral cleavage. effervesces in cold acid. Calcite.

2. Same, but effervesces only in hot acid. Dolomite.

3. Similar to calcite but heavy and effervesces in hot acid; may be rusty. Iron spar.

4. Very heavy, color generally white or gray, effervesces with dilute acid, bead of lead produced on charcoal with soda. Cerussite (carbonate of lead).

5. Luster vitreous, color white, green or blue, effervesces with cold acid, gives with soda or charcoal a yellow incrustation when hot of zinc oxide. Smithsonite (carbonate of zinc).

6. Similar, but gelatinises with acid. Calamine (silicate of zinc).

7. Mostly with good cleavage, very heavy, often fibrous structure. Celestite (strontium sulphate).

9. Harder, colors violet blue, green, grayish, etc., does not scratch glass and generally transparent. Fluorspar.

10. Hard, scratches glass with difficulty, leaving its powder behind it, often in six-sided prisms, colors green, reddish, brown, etc. Apatite.

11. Soft, luster vitereous to greasy, generally light colors and looks like ice, brittle. Cryolite.

These yield water in open or closed glass tube.

1. Very soft, scratched by finger nail, white or grayish, often satiny luster. Gypsum (calcium sulphate).

2. Another variety is colorless, transparent and in distinct cleavages in crystals. Selenite (calcium sulphate).

3. Soft, soapy feel, green, brown, white or mottled colors, when it consists of folia, usually easily separated; it is called Talc. When massive, granulated and no folia, it is called Steatite (or soapstone).

4. Soft, clay-like. greasy feel, blue color on charcoal when heated with cobalt nitrate solution. Kaolin.

5. Like talc or fibrous asbestos. Serpentine.

6. Dark or light green, earthy or scaly. Chlorite.

7. In elastic leaves or scales, cleaving into thin plates. Mica.

To determine if water is present in mineral insert little of specimens into a glass tube, about 3 inches long and ¼ inch in diameter. Apply the flame at part where mineral lies and note if any drops of water are deposited almost immediately in tube, above the heated part.

### EDITOR TURNER BACK

The 'Frisco Catierer caters no more and Editor and Mrs. Turner has returned to the Boundary. Mr. Turner is now with the Phoenix Pioneer. Six years ago the editor undertook to civilize the natives of Cascade through the columns of the Cascade Record, but his efforts were as fruitless as if he had had been on the same mission in Spokane. Two years later he took the helm of the Grand Forks News and tried to install in the feeble minds of the citizens of that burg the happiness that honesty brought to those who followed in its paths but his labors would have born more fruit had he been pleading for mercy for the Jews in Russia. One year later he published the Sun in Columbia, but the rays which were drawn from the editors knowledge fountain were too warm and the Sun gradually withered and died. He then spent a few weeks in the mining camp of Phoenix on a paper called the Pioneer, which is still being published, and the life of the mayor and aldermen of that town was not a pleasant one for those few weeks. Then came the trying ordeal of newspaper life preaching the virtues of liberalism through the columns of this paper during Ross' campaign. The editor then took himself to Frisco where he published the Catierer, but the rock upon which Frisco stands trembles too much for the editor in his declining years.

### Did He Wear Yellow Leggings?

Vancouver World: "Mr. G. B. Taylor a mining man from Greenwood, is in the city on a combined business and pleasure trip.

## GOES RAILWAY BUILDING

L. E. Roliey, formerly assistant mining engineer for the B. C. Copper Co., left Tuesday for Montreal; where he will take charge of the construction of a new railway now building from that city to the city of Quebec, and south to Vermont. Before leaving he was offered $500 for his interest in the Duncan mine, West Fork, but he declined to part with it.

## ELECTRIC COMPRESSORS

The use of electricity as an actuating force for rock drills in Rand mines still waits upon the introduction of an electrically driven drill suitable for operating on the rock found in these fields. This fact, of course, governs the question of the comparative values of compressed air and electricity as a motive power applied at a distance from the shaft of a mine. That the efficiency of compressed air is, under normal conditions, much lower, has been definitely proved more than once, the fact being attributable to the thermo-dynamic loss of available energy and to the loss of air by leakage in long pipes. The inconvenience of moving lengths of cumbersome piping is admitted to be a further objection to the use of air compressors. An innovation which promises to combine the best points of both electricity and compressed air is about to be introduced at the Hercules shaft to the south of the East Rand Proprietary mines. Briefly stated, electricity generated on the surface will be transmitted underground to drive a portable air compressor which will actuate the ordinary rock drill at a minimum distance from the face of the working and with consequently the minimum loss of power. Theoretically the economy rendered possible thereby is considerable, and it remains to be seen how the system operates in practice. The first installation will consist of two Reavell two-stage portable direct-coupled electrically driven machines. It will be of the double-ended quadruplex type, 160 B. H. P., 25 cycles, 3,000 volts, making 205 revolutions per minute. It is claimed for this compressor that it is more compact than others and best adapted for (been driven by) electric motor. Needless to state, the success of this departure will result in a large number of such compressors being employed underground in the mines of the Rand.—South African Mines.

# IN THE TULAMEEN

**Geological Formation of the District. —Rockford and Stump Lake.**

The neighborhood of Dropping Water creek received only a superficial examination, and once more I began to enter upon an area of rocks marked Nicola (Triassic) on the map, but which evidently belong to the Jura-Trias.

As the head of Stump lake was approached decomposed diabases very much shattered and often dolomotized occur, the change having taken place during the period of volcanic activity. There is a well sustained theory that volcanic rocks at one time extended over the Jura-Trias in this immediate neighborhood, but here, as elsewhere, the exact conditions of the Jura-Trias, as well as those that governed the volcanic rocks, have only been imperfectly understood

To prove this, in one way, at least, it is only necessary to mention that rocks colored on the geological map as Triassic are classified in the report accompanying the map as subcarboniferous, though it is quite true that this latter classification is merely provisional; but recent investigations into this field may result in an early reclassification of the two important areas which seem to need it, viz.: Carboniferous and Triassic; the position and importance of Jurassic strata having in the past been very slightly determined by early observers.

Stump lake has some peculiarities that are of geological interest. Even if all the circumstances connected with this lake be taken into consideration, it has been difficult to account for the lake itself. It derives its name from the fact that stumps of the ordinary pine (Pinus ponderosa) are found in some places at the bottom of the lake, especially near the outlet.

The hypothesis is that the water flowing into the valley originally sank, finding its way southward in some way below the great drift of the country, and that the accidental closing of the subterraneous outlet must have resulted in the formation of the lake. Indian traditions are cited to prove that pine trees once covered a considerable portion of the lake bottom, thus showing that the lake itself is comparatively recent.

It has been suggested to deepen the outlet of this lake and thus reclaim a considerable area of good farming land. Stump lake is between four and five miles long, and from the vicinity of Napier lake, not far from where Dropping Water Creek road intersects the wagon road from Kamloops to Nicola lake to the line of argillites and amphibolites, there is the representatives of the southwest side of an important synelinal. This synelinal is quite wide and is represented by rocks of the subcarboniferous, locally known as the Campbell Creek beds, though somewhat less in thickness. The explanation of this variation of thickness is that the beds here occur either on the summit of a compressed anticline or that they are faulted to the southwestward, with the latter alternative quite probable

Until there be a complete resurvey of the country south of Kamloops, it is unnecessary to present any new theories. In the event of such a resurvey the true position and importance of the Carbaniferous, Triassic and Jurassic rocks will be finally and fully worked out. The present official knowledge is so scant as to have led to much misconception.

The greater portion of the road along Stump lake is wet and muddy. This is caused by the formation sloping toward the west side of the lake, and many regard the cold and retentive clay covering as evidence of underlying coal measures.

So far no coal has been found in the carboniferous rocks of British Columbia. Even where the greatest development of these rocks occurs, very near Kamloops and up the North Thompson, there are no indications of coal, nor do the Triassic rocks afford any evidence of coal measures. but recent observations of the Jurassic strata have so far led to the discovery of thin seams of coal in association with limestones and limestone shales of Jurassic date.

It is well known that seams of coal of Jurassic age thin and thicken capriciously, but there is good reason for believing that seams of workable coal of a better quality than the coal of Cretaceous age, if not already found, will be found within the province.

About two miles south of the head of Stump lake is the hotel kept by Mr. Scott. He is a veteran of 72 years, 30 of which have been spent on his ranch at Rockford. This place is well named, though "full" might be substituted for the present suffix.

Waterworn rocks, glacial and otherwise, are very much in evidence in the immediate vicinity of Rockford, and with these are associated a considerable thickness of quarternary clays.

Just as the welcome light of Scott's hotel came in sight, the dead leaves began to rustle ominously, and the wind, which for days had blown from the south with springlike weather, suddenly shifted and began to moan in piercing blasts from the north. To those accustomed to the variations of the March winds on the interior plateau, especially where a mild winter has intervened, the sudden change in the direction of the wind from the previously long prevailing quarter of the south and west betokened a belated low dip or cold wave, and the following morning no surprise was expressed when the record of the thermometer showed that, from fifty above on the preceding morning, the following morning it denoted zero, and the next morning —4, and the dip prevailed for several days, though the temperature rapidly rose after the fifth day and it became more like that which had previously ruled.

With the return of mild weather, I began the examination of the Rockford-Stump lake area.

The metalliferous deposits in the vicinity of Rockford and Stump lake are contained in an area of about 21 square miles (6 miles long by 3½ wide).

About 16 years ago there was a rush into this neighborhood. Mineral hill, which lies northwest of Rockford, represents the synelinal and anticlinal of the argillites and amphibolites, which are intersected by quartz veins. On this hill most of the prospecting and development work has been done.

At that time there was a wild rush into this and other portions of the province, and a considerable amount of capital was then expended in prospecting and development work. It is authentically estimated that a English company expended from £40,000 to £50,000 in prospecting and sinking shafts, putting up buildings and installing plants on several groups of mineral claims there, the evidences of which are still to be seen

As it is known that the people of Kamloops and those of other parts of the province are more or less interested in Mineral hill and vicinity, and as information with regard to the actual status of mineral occurrence in that neighborhood was very much in demand, it became necessary to make a careful and conscientious investigation of conditions.

The veins are of quartz, and they vary from 12 inches to 5 or 6 feet in width. The theory is, that originally the argillites and amphibolites intersected by the quartz veins at variously inclined angles contained innumerably small veins of calcite. As these veins formed weak places in the wall rocks when the period of Tertiary volcanic activity of the neighborhood began, the calcite veins were reopened and enlarged and filled with thermal solutions, water and silica carrying such minerals as chalcopyrites and steel galena holding silver, together with blende and a little iron pyrites. The wall rocks evidently carry much fine yellowish iron, most of which was evidently distributed through the wall rock previously to the period of volcanic activity, though the hydrothermal action silicified and otherwise hardened the argillites and amphibolites. I could not see any free gold or any evidence of gold in the quartz, though I was assured that the quartz yielded high values of gold and silver, Copper carbonates, green and blue, were visible on the quartz of the waste dumps, but the proportion of such mineral as chalcopyrites and silver galena to gangue is indeed very small, though it must be admitted that none of the workings have gone below the oxidized zone, yet small quantities of sulphides, consisting of yellow copper and silver galena are found scattered through the mass of the removed rock material.

As to values, the record of six separate analyses are given in the official report made about 12 years ago. The restriction is, however, made in the report that it was not always possible to attach the results to the particular claims from which they were derived, the specimens having been obtained for the most part during the early stages of the prospecting and before the official visit to the locality.

The six instances are here given:

| | Ounces. | Short tons. |
|---|---|---|
| One of the Hepburn claims | 0.759 | 406,574 |
| Nicola Mining & Milling Co | 0.729 | 104,721 |
| Near Stump lake | distinct trace | 20,339 |
| Near Stump lake | 6.096 | 90,650 |
| Near Stump lake | 0.792 | 15,094 |
| Near Stump lake | 1.969 | 17,063 |

In his report the late director of the survey (Dr. Dawson), made the following statement:

"Though scarcely any work has been done upon these deposits since 1890, partly in consequence of the general depression in mining matters, but in this instance also because of special difficulties concerned, there can, I believe there can, be no doubt that this district will ultimately become a mining center of some little importance."
—H. F. Evans in Mining World.

Elkhorn Beer

Has been a favorite from it birth, as is evidenced by is popularity in all the towns of the Boundary.

**How to Break Up a Cold.**

It may be a surprise to many to learn that a severe cold can be completely broken up in one or two days' time. The first symptoms of a cold are a dry, loud cough, a profuse watery discharge from the nose, and a thin, white coating on the tongue. When Chamberlain's cough remedy is taken every hour on the first appearance of these symptoms, it counteracts the the effect of the cold and restores the system to a healthy condition within a day or two. For sale by all druggists.

□ All the producing copper mines in Michigan are situated in three counties, Houghton, Heweenaw and Ontonagon. Some development work is also being done in a few other places, but no mines of importance have as yet been opened. The copper is extracted almost wholly from ores carrying native metal, a small percentage coming from the Mohawk mine, where the mineral, Mohawkite, an arsenide of copper, nickel and cobalt, occurs. The principal copper mining towns in Michigan are Houghton and Calumet.

The cleanup of the 10-stamp mill at the Eva, at Camborne, in the Upper Lardeau, for May was a gold brick valued at $6,000. The brick was sent to Nelson and from there forwarded to Helena. This is the largest gold brick turned out by the mill so far, as heretofore they have amounted to about $5,000.

The grading operations on the V., V. & E. have revealed the presence of mineral. At Rankin's No. 2 camp and also at one of Gallagher's camps promising deposits were exposed, and in the latter case were staked. Placer gold is also reported near McBride's place on Anarchist mountain.

## ORGANIZE—EDUCATE.

The attention of Times readers is directed to the supplimemt sheet in this week's issue. You are advised to read and thoroughly digest its contents. In addition to pointing out the defects and weaknesses of the present administration, it lays down the strong policy of the Liberal party in British Columbia, a policy that will encourage the investment of large capital, the development of our vast mineral, forest and agricultural resources, and the settling of vast areas with hundreds of thousands of prosperous, happy and contented citizens. It is apparent to all fair-minded people, who have watched the record of the McBride government, that in all this the present administration has been a lamentable failure. Little or no encouragement has been given to the large investors of producing capital, no strong immigration policy has been inaugurated, the province has been insufficiently advertised and the public domain has been practically given away to corporations already rich and powerful. Upon what excuse, then, can fair-minded people support the present government?

In spite of the reiterated denials of the government officials that no appeal will be made to the country this year, it is the strong belief among the most prominent members of the Liberal party that an election will be held this autumn. Whether this province is on the eve of an election or not, the present is not any too soon to start the forces of the Liberal party in motion. There is much work to be done. Thorough organization is required. The principles of Liberalism should be inculcated in the minds of all loyal citizens in the province, so that when the battle finally comes no honest voter will be ignorant of what is best for his own future welfare and for the welfare of the province of British Columbia.

## BOUNDARY ORE TONNAGE.

The following table gives the ore shipments of the Boundary mines for 1900, 1901, 1902, 1903, 1904, 1905 and 1906, as reported to the Boundary Creek Times:

| MINE, | CAMP. | 1900 | 1901 | 1902 | 1903 | 1904 | 1905 | 1906 | Past Week |

## COSMOPOLITAN CHARACTER OF THE CANADIAN WEST.

The presence of hundreds of naturalized Canadian citizens at the great "Kentucky Homecomers'" gathering last week suggests the cosmopolitan character of the great northwest. From Alberta more than one hundred former Kentuckians registered at the Louisville headquarters. British Columbia, Saskatchewan and Manitoba sent a large quota, all breathing admiration for their adopted country. The remote Peace river, the fabled land of boundless resources, sent John D. Markham, an ex-Kentuckian, whose speech at the unveiling of the monument to the old commonwealth's native sons who have cast their lot with other nations, is classed among one of the most brilliant outburst of an occasion where splendid oratory flowed spontaneously.

The men of the south find in British institutions a kindred spirit. This is specially true of Kentucky. That state was settled by Viriginia planters, who were scarcely a generation removed from old England. The architecture of the south is indelibly marked with the English style and today the country homes of Dixie resemble in a greater degree those of old England than of New England. The southern men who fought the great civil war have not forgotten the sympathy extended to them by the British empire during those strenuous days. Perhaps these factors are responsible for the ease with which the men of the south who emigrate to Canada are assimilated.

Kentucky has contributed some very desireble settlers to western Canada. They bring with them much of the energy and culture that has enriched the life of the Southern States. The literature of Kentucky has in a way occupied an exalted position for generations and the folk lore of the state expresses the lofty sentiment of the people. Western Canada received much valuable advertising on this occasion through her adopted sons.—Winnipeg Telegram.

## HARMFUL BOOSTING

A correspondent to the Boundary Creek Times writes:

"There is nothing gained by falsifying the statements of the conditions of development work going on in a prospect or mine, saying there is ore when there is not ore, or saying we are down 100 feet, when only 80 or 90 feet. These lies are too easily proved, and only goes to hurt the boost that a good prospect or prospective mine makes for itself. But it is mostly done by the upstart or would-be miner. He gets his start here and also his finish.

"No mine should be operated without carefully prepared maps showing the workings, longitudinally and in cross section and plan. They should indicate the character of wall rocks, the width of the vein, and any other physical features of importance. It is dangerous to carry on mining operations in proximity to old flooded workings without being provided with good maps of such old workings, and lessen the danger of running out to daylight in crosscuts.

"No one believes that a lawyer can master his profession in a month or a year by simply reading law, nor can one become a competent civil engineer without a long course of preparation, to which must be added practical experience. The mining engineer must take a course more extensive and comprehensive than that of any other profession, and yet people think that anyone can successfully operate a mine."

# BUYS ANOTHER MINE

## B. C. Copper Co. Gets the Oro Denoro.

## WILL FULLY DEVELOP

### Diamond Drills Are Being Kept at Work.—Men Wanted at the Mother Lode.

Some months ago the British Columbia Copper Co. bonded the Oro Denoro mine in Summit camp, and since then has continued to prospect with a view to determining, approximately, the value of the mine. Their investigations have proved satisfactory and the mine has passed into the hands of the B. C. Copper Co., the deal having been closed last Saturday. The Oro Denoro was formerly the property of the Oro Denoro Mines Co., Ltd., of which Smith Curtis, ex-M. P. P., and J. S. C. Fraser, manager of the Rossland Bank of Montreal branch, were prominent members. The mine has been on the shipping list since 1903, and has produced a total of 41.348 tons. This is the second addition to the B. C. Copper Co.'s holdings during the past week, a working bond having been secured on the B. C. mine. Prospecting on the Oro Denoro is being prosecuted with diamond drills and development work will be vigorously pushed forward during the summer months. The mine will be thoroughly developed, and by the time the smelter resumes operations in the autumn it will be in shape to produce large shipments. Mr. McAllister, manager for the company, declined to state the purchase price.

AT MOTHER LODE.

At the Mother Lode the work of development is also going ahead with remarkable vigor. The four compartment shaft has been sunk to the 460 foot level and work on the 400 foot level station and pocket will be commenced soon. The work at the mine is handicapped to some extent by lack of men. Machine men and laborers are both needed. A new bunk house for 60 men will soon be under construction as well as seven new cottages for married men. The houses are being designed and located with a view to providing the workmen with comfortable and homelike residences.

---

If you knew the value of Chamberlain's Salve you would never wish to be without it. Here are some of the diseases for which it is especially valuable: Sore nipples, chapped hands, burns, frost bites, chilblains, chronic sore eyes, itching piles, tetter, salt rheum and eczema. Price, 25 cents per box. For sale by all druggists.

Be patriotic! Celebrate Dominion Day and buy your flags and fireworks at Smith & McRae's. 42-43

Pictorial postcards in strong card and leather, colored mountain scenes and comic pictures. Smith & McRae. 42-43

A meeting of the Liberal Association will be neld next Thursday night in J. R. Brown's office. Important business.

E. G. Warren of Greenwood Electric Light Co. installed a ten horse-power electric motor at the Prince Henry mine this week.

Mrs. W. J. Nelson left Wednesday for Winona, Minnesota, where she will spend three months visiting with relatives of Mr. Nelson.

Try McConkeys chocolates, best chocolate quality in Greenwood and each box is a work of art. You get them only at White Bros.

Col. L. T. Dickanson of Chicago, who is largely interested in the Crescent mine, arrived in the city the other day and is busy inspecting his property.

FOR SALE—Riding, driving a ndwork horses. Standing at Midway the stallion "General Dewey" $8.00 for the season. Stook Bros., land and stock dealers, Midway.

E. J. Travers, manager for the British Columbia Car Service Bureau, with headquarters in Nelson, visited Greenwood Wednesday and inspected the car service of the C. P. R. here.

Have you read the book of the hour, "The Jungle," by Upton Sinclair? Other new books just in, "Pam Decides," "Fenwick's Career," by Mrs. Ward; "The Way of the Spirit," by Rider Haggard. Smith & McRae. 42-43

If your stomach troubles you do not conclude that there is no cure, for a great many have been permanently cured by Chamberlain's Stomach and Liver Tablets. Try them, they are certain to prove beneficial. They only cost a quarter. Sold by all druggists

The ladies of the Presbyterian Church who had charge of the "Mikado Festival" held recently, wish to thank those who assisted in work of decorating the hall, those who took part in the program and especially the members of the Citizens Band for their kind assistance.

Charles Stooke, of Stooke Bros., Midway, visited the city Monday. Mr. Stooke is preparing for a campaign in the land business. His firm is dealing extensively in Midway fruit lands and they are making a determined effort to bring settlers into that part of the country.

Swift's prime hams and bacon, sweet and tasty at Galloway Bros. 42

The morning service at the Presbyterian church on Sunday will be devoted to a service of the Sunday School lessons for the past quarter, conducted by the pastor's wife, taking the place of the regular Sunday School services of the afternoon. In the evening Rev. M. D. McKee will preach a special service to young men.

The Strathmore mine is turning out ore at an average of a ton per day. The output continues to show good values in native gold and silver. Preparations are under way for the construction of a wagon road, so that ore may be gotten out more easily for the next shipment, which will be made at an early date.

The funeral of Carl G. Peterson, the victim of the Strathmore mine accident, was held last Saturday. The services were in charge of the I. O. O. F., of which deceased was a member, Rev. M. D. McKee officiating. The members of the Miners' union also attended in a body. The funeral was very largely attended.

Mrs. Bovee, dancing teacher, will give her opening ball in Greenwood at Eagle's hall on Monday evening, June 25, 1906. Mrs. Bovee is a teacher of note and ability, having taught many years, and teaches all the late round dances, including Germans, cotillions, marches. Mrs. Bovee makes a specialty of the fancy dance, Highland fling. Everyone should attend the Monday evening ball, 25th. Lessons will be given Monday evening from 7:30 until 9 o'clock.

Dr. Simmons, Dentist; Open evenings.

W. B. Wilcox, the genial editor of the Phoenix Pioneer visited the city Thursday. He reports business good in his town.

P. H. Burnham, traffic manager for the Great Northern at Grand Forks, paid a visit to the city this week in connection with his department.

School closed Friday for six weeks. The pupils in Miss Martin's room presented her with half a dozen cups and saucers and a bon bon dish while Mr. Watson was presented with a clock by his pupils.

## UNION MEETING

The young people of the Presbyterian and Methodist churches held a joint meeting on Wednesday evening in the former church. Members of both took part in the devotional exercises and also in the program which was rendered later. Among those who assisted in the program were Mrs. McCutcheon, pianist; Mrs. Sidney Oliver and Alex. Robinson, duet; Mrs. Hunter and Mr. McKendry, musical selection; Mr. Parker, recitation, and Rev. H. S. Hastings, short address. Refreshments of ice cream and cake were served and a pleasant evening closed with "God Save the King."

## SEVENTH ANNIVERSARY

A pleasing event occurred Thursday night when a large number of the people of the Presbyterian church gathered at the home of Rev. and Mrs. McKee and presented them with a collection of silverware and china in honor of the seventh annual anniversary of their marriage. The function was most successfully planned and carried out by the ladies of the congregation. Mr. and Mrs. McKee were much surprised and delighted by the evidences of good will and esteem, and most sincerely thanked the people for their kindness. The evening was pleasantly spent in conversation and games.

## PHOENIX CELEBRATION

### Some of the Prizes. Tickets Good for Two Days.

The committee in charge of the sports for the Phoenix celebration met Thursday night and eompleted all arrangements for the program of events. Among the list of prizes offered are hose reel race (wet), $400; horse racing, $150; baseball, $150; machine rock drilling, $175, Caledonian sports, $125. About twelve teams have entered in the rock drilling contest. In the evening a ball will be held and music will be furnished throughout the day and evening by the Phoenix band. Special trains will be run from Midway, Greenwood and Grand Forks, returning late the same night, but tickets will be good until next day for the convenience of those who wish to stay over.

## GOLDFINCH STRIKE

A good vein of ore two and a half feet wide and averaging $50 per ton has been opened up in the Goldfinch tunnel. The tunnel is in some 600 feet and the ore was secured at a depth of about 400 feet. This is one of the mines owned by Mark F. Madden and his Chicago friends. The E. P. U. is being worked in conjunction with the Goldfinch. W. T. Hunter is associated with Mr. Madden in the latter.

### CARD OF THANKS

Messrs. Portmann Brothers have disposed of their brewery business in this city to John Docksteader, who will continue the same under the Elkhorn Brewing Company.

In retiring, after seven years business in the city, the former proprietors desire to thank their customers and the public for their generous patronage, and to express the hope that the same kindly treatment will be extended to their successor.

---

To make room for McConkeys chocolates, White Bros. are selling Lowneys and Webbs chocolates at a great reduction.

### Unknown Friends.

There are many people who have used Chamberlain's Colic, Cholera and Diarrhoea Remedy with splendid results, but who are unknown because they have hesitated about giving a testimonial of their experience for publication. These people, however, are none the less friends of this remedy. They have done much toward making it a household word by their personal recommendations to friends and neighbors. It is a good medicine to have in the home and is widely known for its cures of diarrhoea and all forms of bowel trouble. For sale by all druggists.

### MINERAL ACT

### Certificate of Improvements

NOTICE.

"London" Mineral Claim, situate in the Greenwood Mining Division of Yale District.
Where located: In Deadwood Camp.

TAKE NOTICE that I, Arthur Murdoch Whiteside, acting as agent for F. F. Ketchum, Free Miner's Certificate No. B93037, and George M. Foster, Free Miner's Certificate No. B6554, intend, sixty days from the date hereof, to apply to the Mining Recorder for a certificate of Improvements, for the purpose of obtaining a Crown Grant of their interests in the above claim.

And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements.

Dated this 15th day of June, A.D. 1906.

42-50 A. M. WHITESIDE.

### MINERAL ACT.

### Certificate of Improvements.

NOTICE.

"The Cairngorm Fractional" Mineral Claim, situate in the Greenwood Mining Division of Yale District. Where located: In Long Lake Camp.

TAKE NOTICE that I, M. J. M. Wood, Agent for the Vancouver and Boundary Creek Developing & Mining Company, Ltd. Lty., Free Miner's Certificate No. B93038, and Charles L. Thomet, Free Miners' Certificate No. B6589, intend, sixty days from the date hereof, to apply to the Mining Recorder for a Certificate of Improvements, for the purpose of obtaining a Crown Grant of the above claim.

And further take notice that action, under section 37, must be commenced before the issuance of such Certificate of Improvements.

Dated this 22nd day of June, A D. 1906.

42-50 M. J. M. WOOD.

### NOTICE

Parties desirous of tendering on the construction of the irrigation system to be installed by the Kettle Valley Irrigation Fruit Lands Co., Ltd., can now do so. Time for tendering will expire on June 30, 1906. Plans and specifications are on view at the residence of the secretary of the company at Midway, and at the engineers' camp, near Rock creek. Tenders must be sealed The lowest or any tender not necessarily accepted.

W. H. NORRIS,
Secretary.

W. R. PILSWORTH,
Resident Engineer. Rock Creek. 42-43

We buy for cash and we can therefore sell the best footwear at lowest possible prices. Try us. Galloway Bros. 43

## WORK ON THE V., V. & E.

### Laying of Steel Commenced—More Men Wanted.

"Increasing activity in the V., V. & E. yard has marked the past week," says the Midway Star. "The numerous parts of the track-laying machine, which have been lying on flat cars for the past week or two, were unloaded on Monday and strung out along the track at the western limit of the yard ready for assembling. The locomotive for use with the machine will probably arrive in a few days from the shops, where it is being put in a good state of repair. Some 20 men of the steel gang arrived on Saturday, and they are engaged in making final preparations for tracklaying, which we are informed will be commenced some time between now and the 20th.

SHORTAGE OF MEN.

"The shortage of men to work on the western sections of the grade is becomins serious, so much so that a special agent has been dispatched to Europe for the purpose of securing the necessary additional help. It will be quite impossible to complete the road by the specified time if the supply of labor is not greatly augmented. With an abundance of work everywhere, men are rather independent just at present, and this adds greatly to the troubles of the contractors.

## TELEPHONES FOR MINES

Quick communication between the executive officers and employes in the mine or at the works above ground, some distance away, is a factor of economic importance, not only as a matter of convenience, but a safeguard against disaster. Mining companies, particularly in the coal regions, are showing good sense in adopting the telephone where its service is needed. Certainly the time saved in this way, as well as the guarantee that in case of an accident underground a telephone message will bring immediate assistance, will fully compensate for the first cost of this "utility instrument."

As in other innovations to facilitate the working of a mine, the laying of the wires of the telephone may cause some difficulties. Recently, however, there have been several acceptable improvements in this direction, particularly in the mechanical circuit and better insulation of the wires. Conditions in a mine are materially different than above ground, and experience and unusual care are necessary to install underground telephone systems. For instance, attaching the wires in a mine to a bad roof or to timbers that are constantly being removed, or where the haulage current will burn out the coils, will naturally create difficulties that may discourage the use of the telephone. But this careless installation should not be allowed. Moreover, it is expedient not to lay telephone wires on the ground or run them across electric transmission and trolley lines without rubber-covered or other serviceable insulation. Of course lightning arresters may be used to prevent the electric current from destroying the telephone wires.

Copper wire and galvanized iron wire are both used, but the latter will be contaminated by the mine gas and water more than the copper wire. Porcelain supports are better than glass or wood. To safeguard the mine telephone against moisture enclose the instrument in an iron case with an air-tight door.

The subject is attracting universal attention, and we believe is worthy of a careful study. We venture to say that the time is not far distant when the telephone will be as indispensable to a mining company as is the pick to a miner.—Mining World.

## SAVING THE WASTE

An era of closer milling has been inaugurated in the Coeur d'Alenes, practically simultaneously by the big operating companies. They have proved, after an exhaustive and costly series of experiments, that some of the mills have not been doing the most economical work and that what is now discharged from them in the shape of tailings or slimes will repay a secondary treatment. This is not the case at all the mills, as a number of the larger plants near Wallace and Wardner are turning out a very clean product, and tailings above the slime end of the mills will scarcely average one-half of 1 per cent in lead. The attention to secondary processes now in vogue in some of these mills has only recently been considered necessary in several others. The Morning mine, near Mullan, purchased by the Federal company some few months ago has one of the best and largest mills in the district, but they are now engaged in building an addition which will house a unit of the Callow system of concentration, with additional crushing and concentrating machinery. The Callow unit will consist of 17 large oval settling tanks with three sets of belt screens for the purpose of settling and sizing. The settlings, after being sized by means of the traveling screens, will be treated on 32 slime machines consisting of Wilfley tables and vanners. At the Bunker Hill mine at Wardner preparations are being made to build a new plant below the dump, which will recrush the coarse tailings and put them through another process of concentration. For various reasons it seems likely that the Bunker Hill dump will pay unusually large returns by reworking. Of late much high grade ore has been going through the mill, and for that reason alone the dumps are bound to prove more valuable than the average.—Mining World.

### Unknown Friends.

There are many people who have used Chamberlain's Colic, Cholera and Diarrhoea Remedy with splendid results, but who are unknown because they have hesitated about giving a testimonial of their experience for publication. These people, however, are none the less friends of this remedy. They have done much toward making it a household word by their personal recommendations to friends and neighbors. It is a good m dicine to have in the home and is widely known for its cures of diarrhoea and all forms of bowel trouble. For sale by all druggists.

### SUNDAY SERVICES.

CATHOLIC.—Church of the Sacred Heart.—Divine service 1st, third and fourth Sunday in each month. Holy mass at 10 a. m.; vespers and benediction at 7:30 p. m.; Sunday school at 2:30 p.m. REV. J. A. BEDARD, O. M. I., pastor.

ANGLICAN—St. Jude's. Rev. John Leech-Porter, B. D., pastor. Services at 8 a. m., 11 a. m. and 7.30 p. m.; Sunday school, 2:30 p. m. All seats free. Midway, 2nd and 4th Sunday each month at 3:30 p.m. Phoenix, 1st and 3rd Sunday each month at 3:30 p. m.

PRESBYTERIAN—St. Columba, Rev. M. D. Mckee, pastor. Services 11 a. m. and 7:30 p. m.; Sunday school 2:30 p. m.

METHODIST—Rev. H. S. Hastings, pastor. Services at 11 a. m. and 7:30 p. m.; Sunday school, 2:30 p. m.

If you knew the value of Chamberlain's Salve you would never wish to be without it. Here are some of the diseases for which it is especially valuable: Sore nipples, chapped hands, burns, frost bites, chilblains, chronic sore eyes, itching piles, tetter, salt rheum and eczema. Price, 25 cents per box. For sale by all druggists.

Strawberries, cherries, and all fruits in season fresh four times a week. Galloway Bros. 42

### NOTICE

NOTICE Is hereby given that the partnership heretofore existing between the undersigned in their business of painters, has this day been dissolvrd by mutual consent. The said business will hereafter be carried on by George H. Thompson. All persons indebted to the said firm are requested to pay the amount of their indebtedness to the said George H. Thompson, who will assume and pay all liabilities owing by the said firm.

Dated at Greenwood, B. C., this 15th day of June, 1906.

### Synopsis of Canadian Homestead Regulations.

ANY available Dominion Lands within the Railway Belt in British Columbia, may be homesteaded by any person who is the sole head of a family, or any male over 18 years of age, to the extent of one-quarter section of 160 acres, more or less.

Entry must be made personally at the local land office for the district in which the land is situate.

The homesteader is required to perform the conditions connected therewith under one of the following plans:

(1) At least six months' residence upon and cultivation of the land in each year for three years.

(2) If the father (or mother, if the father is deceased), of the homesteader resides upon a farm in the vicinity of the land entered for, the requirements as to residence may be satisfied by such person residing with the father or mother,

(3 If the settler has his permanent residence upon farming land owned by him in the vicinity of his homestead, the requirements as to residence may be satisfied by residence upon the said land.

Six months' notice in writing should be given to the Commissioner of Dominion Lands at Ottawa of intention to apply for patent.

Coal lands may be purchased at $10 per acre for soft coal and $20 for anthracite. Not more than 320 acres can be acquired by one individual or company. Royalty at the rate of ten cents per ton of 2,00 pounds shall be collected on the gross output.

W. W. CORY,
Deputy of the Minister of the Interior.

N.B.—Unauthorized publication of this advertisement will not be paid for. 32-59

## MIDWAY NEWS

(From the Star.)

Mr. Luke Greevy, representing the daily Gazette and Bulletin, published at Williamsport, Pennsylvania, arrived in town Wednesday evening, and left by Thursday morning's stage. The object of his visit is to furnish his paper with accurate information concerning the mineral and other resources of the country immediately west of here, in which he says people back east are becoming increasingly interested. He also stated that there is an abundance of capital awaiting investment, and that its possessors are looking in this direction. We have abundant resources in this province, greater probably than can be found in a like area in any other part of the world, but we lack the necessary capital to enable them to be developed.

Contractor John D. Porter, accompanied by his daughter, Miss Jean, came up from Spokane on Tuesday.

Mr. and Mrs. Swanson, of the Hotel Swanson, made a trip to Molson yesterday.

Among the trestles between here and Oroville on the V., V. & E. is one two bents high, or about 100 feet.

Mr. and Mrs. J. Gillis have been visiting friends on Anarchist mountain.

The farmers should have no kick coming this spring on the score of lack of moisture.

The steel gang have been engaged in curving rails in the yard for the past few days.

Mrs. J. Smith of Beaverdell, was in town on Tuesday.

Mr. E. T. Hogle of New York, was registered at the Spokane Sunday. It is understood he is out west looking up some mining properties in which he is interested.

Bert Logan is at present on a trip to Greenwood. His nephew, Austin, has charge of the business here during his absence.

K. Eldridge, brother of H. Eldridge, who left Midway a few months ago to take up a homestead in the Edmonton district, writes that he is getting along fine, having secured a desirable location about 12 miles from Strathcona. He expects to harvest 100 tons of hay this summer.

Burns & Jordon this week completed their work on the V., V. & E. and paid off the men.

It is satisfactory to know that as soon as there is a demand for 250 incandescent lamps in Midway the power company will extend its line from Boundary Falls.

Rev. J. Leech Porter of Greenwood, officiated at the Memorial service in the Presbyterian church last Sunday.

## THE MERCHANTS CORNER

All houses carrying white shoes report a very large sale on them. It is evident that the woman who does not have a pair of white oxfords this summer is going to feel very lonesome, says the Dry Goods Reporter. Many of the smaller dealers have put in a stock of them since certain shoe polish makers offer a line of dyes which will change any white canvas shoe to any shade desired. They feel that now, with a small stock of dyes, and three or four styles of white canvas oxfords, they can give a woman almost any color of shoe she can ask for.

Large dealers are buying the colored shoes, both in canvas and in kid and calf, as well as the white. It is certainly going to be a good season for the shoeman. Shoes this season are so summery that no one will try to make old shoes do if they possibly can afford new ones. And one pair is not enough. There must be a pair of patent leather pumps or Gibson ties, and then a pair of white canvas oxfords, or low shoes of some description in white canvas, at least. In addition there is very apt to be also a pair of white kid shoes, and a pair of lavender, or old rose, or green pumps would also be very acceptable to any woman.

CARPETS AND CURTAINS.

It doesn't require much effort to sell carpets and curtains now. But are you selling all you might? Numerous merchants have increased their sales by paying more attention to display. One end of the carpet section is devoted to rooms fitted up from stock. Of course, the side of the rooms toward the selling space is left out. There are usually a parlor, sitting room, bed room, dining room, library and bathroom, showing rugs, carpets, curtains, linoleums, glassware, crockery and bric-a-brac. If the carpet section is on an upper floor, on the landing of the stairs leading thereto are found "cozy corners" formed of Oriental rugs and draperies.

Drop into White Bros. and ask to see the soaps epecially manufactured for hard water.

Copper plates absorb mercury in different proportions depending on the temperature, the rate of absorption rising with the latter, and the total absorption being greater at high than at low temperatures. The plating of the plates with silver, at first restrains the absorption, but ultimately the quantity of mercury absorbed is as great as with plain copper plates. Muntz metal, containing 28 per cent zinc and 62 per cent copper, is sometimes used for battery plates. It is claimed that this composition lasts longer, is cheaper, easier to remove amalgam from, requires less attention and does not discolor. The solubility of mercury in it is very low.

## LICENSE REVOKED

At the meeting of the license commissioners, held in Midway last week, the license of the Great Northern hotel was revoked and a license granted to the Bancroft hotel. The deposed licensee is indignant over the action of the commissioners and will appeal to the county judge to have the commissioners show cause for their action.

## THE GREENWOOD LINE

### Indications Point o'the Work Starting Soon.

A Midway dispa'ch to the Spokesman-Review says: "It is expected that President James J. Hill will give orders some day this week to begin operations here on the Midway-Greenwood branch The expectations arise from the active preparations being made to commence work. Men are coming into the city and the machinery here has been put into shape for work."

While it was impossible to confirm the above from local sources, it was learned that there is every probability that it is true. It is known that certain steps have been taken by Great Northern officials which indicate their intention to begin work at a comparatively early date. The securing of right of way is often one of the steps taken by a railway company just prior to starting actual construction work. Efforts have been made to secure definite information regarding what steps the Great Northern have taken in this direction, and while nothing positive has been learned it is believed that some steps have been taken toward securing right of way for the Greenwood line. The preparations under way at Midway indicate that two forces of workmen will be put on simultaneously, one starting at that end of the line and the other in the vicinity of the Boundary Falls smelter. Such an arrangement would, doubtless, greatly facilitate the work and rush the line to an early completion.

## MAHARA'S MINSTRELS

When will the minstrel show grow old? Judging from its present popularity its freshness will be perennial. After years of experience in the minstrel business Frank Mahara this year has to offer perhaps the most complete combination of experienced ingenuity and knowledge of theatrical effects in the way of minstrelsy that was ever put on the road before. Unlike other minstrel organizations Frank Mahara seems to have struck a happy thought in putting forth a performance that properly could be termed a rag time operetta and this of course includes all the latest innovations and specialties of the east. Mahara's famous challenge band and orchestra will give a street parade.

## MEADOWLARK'S BOND

### Work Starting on Another Rich Claim.

### MANY MINING DEALS

### Transactions Almost a Daily Occurance.—Will a New City Be Built to the North?

The past week has produced a plentiful crop of good mining deals that will eventually have an excellent effect upon the mining industry of Greenwood and vicinity. The B. C. Copper Co. have bought the Oro Denoro and bonded the B. C. mine; R. Dalby Morkill of Phoenix, acting for a syndicate of local and other capitalists have secured a working bond on the Meadowlark, and, most important of all, a syndicate of New York capitalists, represented by G. B. Dennis of Spokane, has secured bonds on a group of over twenty claims in what is known as the Marshall, Monte and Forty groups.

By this deal a tract of over 700 acres passes into the hands of a group of capitalists whose evident intention it is to thoroughly prospect the claims by means of the diamond drill. This syndicate is probably as strong as any now operating in the Boundary and it is believed that if the newly bonded claims come up to the expectations of the bondholders their next move will be the erection of a smelter on Eholt creek.

A CHERISHED SCHEME.

For years the plan to open a tunnel from Eholt creek to tap the ore bodies in the hills around Phoenix has been the cherished scheme of Greenwood citizens. It has been looked upon as the one step that would ensure to Greenwood an expansive and prosperous future, and for this many business men have been looking with varying hopes. Now that bonds have been secured on the claims between Eholt creek and Phoenix, it looks as if one step had been gained in the realization of the long looked-for boon.

The sum involved in the bonds is understood to be some $225,000, and the time of grace which the bondholders have at their disposal to thoroughly prospect their claims and approximately determine their value is limited in the longest cases to six months, and on some of the claims the purchase price must be paid in from two to four months.

WHAT IT MEANS.

Should the deal be finally consummated it will mean the making of Greenwood as a mining and smelting city. The opening of a tunnel and the erection of a smelter on Eholt creek would mean the building of a large and prosperous settlement to the north of Greenwood. The employes of the mines and smelter would naturally live in the valley, near their work, and not on the hills above. It would make possible the building of a street car line from Greenwood to the new smelter, which would not only provide a new source of revenue for the city, but would bring the merchants into closer touch with the residents of the new north end suburb, creating more business and new wealth

MEADOWLARK BONDED.

Highly important, also, is the deal put through this week when a working bond was secured by R. Dally Morkill of Phoenix, on the Meadowlark claim, near the Skylark. Mr. Morkill is understood to be acting for a syndicate of local and other capitalists, and the bond was secured for a period of 18 months While it could not be learned definitely the actual amount involved in the transaction, it is believed to be in the neighborhood of $20,000.

The bondholders are preparing to develop the claim, and this work will be vigorously pushed and every effort made to determine the value of the mine. A number of local parties and others are the owners of the claim, among them being W. G. McMynn, J. J. Caulfield, Dan Sullivan, James McNichol of Vancouver, and Nels J. Laplant of Marcus. The Meadowlark is a gold silver mine and is said to be one of the most promising properties in the vicinity of Greenwood. Considerable work has been done on it in the way of shafts and open cuts. No shipments have been made, but the quality of the ore found is sufficiently high grade to encourage further development.
