TELEPHONE SYSTEM

Description of Work in the Central Office.

HARD ON THE NERVES

Both Subscribers and Operators Have Their Trials.—A Little Care Is a Big Help.

So many complaints have been heard from business men and others who are subscribers to the local telephone system, about the service rendered, that the Times decided to investigate matters and find out, if possible, where the fault lies, and what improvements could most easily be made. Of the actual working of a telephone exchange few people have but a very indeffinate idea. The public is, of course, most concerned about getting central and the number asked for. To obtain a prompt and satisfactory service the co operation of both subscriber and central is most necessary. A short description of the central exchange will be in order to make clear the work entailed upon those in charge.

On the switchboard a separate indicator is connected with every subscriber's line. When No. 1 calls central, a buzzing noise is heard and No. 1 indicator drops down, revealing the number of the subscriber calling. On a section below is a hole also No. 1. Into this central pushes a connecting plug and calls for the number. Having been given the number, the proper connections are made and the bell is rung. When the conversation has been finished and the subscriber has rung off another indicator drops down and central knows the lines should be disconnected. The same applys to all the numbers from one up to the one hundred and forty odd phones now in use in the city.

The position of a "hello girl" is by no means an enviable one. Their work demands constant attention and requires great accuracy and care. They have to listen to hundreds of different voices, each one with its own peculiar accent, and unless numbers are spoken clearly and distinctly the position of central becomes trying indeed.

That there has been in the past cause for complaint on the part of the public is not the purpose of this article to deny, but the investigations had not proceeded far when it was found that there were faults on both sides, and the ground for complaint on the part of the public has been greatly lessened during the past two weeks by a change in the staff with the result that a much better service has been rendered and fewer complaints have been heard. In order to fully realize the difficulties of manipulating a telephone exchange it is necessary to visit the central office and watch the operators at work. When business is quiet and few calls are being made, it is a comparatively easy thing to give a prompt service, but when a "rush" is on and three, four, five or six calls come in simultaneously or or in quick succession, it is impossible for central to answer all at once, and, of course, someone has to wait, and then trouble begins. While connections are being made with the first calls the last ones are getting impatient by the time their turn comes and the air at both ends is becoming blue.

Subscribers can be of great assistance to central by always giving the numbers (not the names) separately and distinctly. If 142 is wanted, say one—four—two, not one hundred and forty-two. It was learned that the work of central is greatly increased and much complicated by subscribers neglecting to ring off when a conversation is finished. This causes no end of trouble and is the greatest source of annoyance to both the subscriber who calls, the one called and to central. Unless a subscriber rings off, central has no means of knowing that a conversation is finished, and lines are often reported "busy" through this neglect.

It is during a fire that "central" is driven to wits end. No sooner has an alarm been rung than scores of calls come pouring in, and it is then utterly impossible to answer them all and the efforts of "central" to call members of the fire brigade are seriously interfered with.

In conversation with the local manager, L. B. Hodge, it was learned that much confusion frequently arises from efforts to get central after 10 p. m. on week days and after 6 p. m. on Sundays from the phones in the Imperial and Windsor hotels. After those hours these phones are directly connected with the fire hall and ringing these phones turns in an alarm, a thing that should always be avoided except when necessary.

The central office is equipped with an interesting piece of mechanism, known as a calculagraph, for measuring the time consumed in long distance conversations. It is about the size of an ordinary mantel clock with a regular clock dial. When a conversation begins a time slip is placed inside the upper face and a lever pulled which stamps the correct time on the slip. When the call is rung off the time consumed is stamped on the slip and is a correct record of time to be charged for.

In the course of these investigations it was learned that subscribers can greatly assist "central" and secure for themselves best service by giving a strong ring when calling, and by always ringing off when through. In ringing company lines to which two or more phones are connected, strong rings should be given with distinct pauses between. On no account should a phone be used during a thunder storm, as it is dangerous both to the subscriber as well as the operator.

While the service is not as efficient as that given in the large cities, it is equal to that of most towns, and when the improvements now under consideration have been carried out it will be possible for the company to serve the public still better.

Strawberries, cherries, and all fruits in season fresh four times a week. Galloway Bros. 42

LICENSE CHANGES

At the meeting of the license commissioners held this week, a number of applications for changes in licenses were considered and granted. J. E. Bishop made application to have the the Victoria hotel license changed from that of a hotel to a saloon. This was granted. D. Manchester's application to have hotel license transferred from Queens hotel to the Clarandon, and a saloon license granted instead, was also passed. The license for the Pacific was transferred from the late proprietor, Madden, to the new proprietors, Greig & Morrison. The Arlington license was also transferred from the former proprietor to C. A. Dempsey, who has lately acquired the premises.

THE EUREKA MINE

High Grade Property to Start Work.

NEW COMPANY FORMED

Local Men Organize to Push Development—300,000 Shares to be Placed on the Market.

Active work on the Eureka mine is expected to commence shortly. The Greenwood-Eureka Mining company has been formed to take charge of the mine, with a capital of $300,000, divided into shares with a par value of one dollar each. Some 200,000 shares will be placed on the market for immediate investment and the proceeds will be used in vigorously pushing development work. Messrs. Hamlin & Wellwood are heavily interested in the new company and it is their purpose to make the Eureka one of the big producing mines of Greenwood. The Eureka is considered one of the very best high grade propositions in this district, and the stock should prove a most attractive investment, especially as the first block of shares will be placed on the market at five cennts. It adjoins the Gold Finch and the E. P. U. on the south, while the Prince Henry lies just north. It can be readily seen that the Eureka is most favorably situated, being surrounded by mines that have demonstrated the existence of high values. Considerable development work has been done already.

Two tunnels have been run, one 25 feet on the Gold Finch lead and the other 50 feet on the E. P. U. lead. The mine is well situated for economical work, much of the development work being done by tunneling. The ore is rich in both gold and silver and the prospects of the Greenwood-Eureka Mining Company are bright.

STRATHMORE ACCIDENT

Charles Peterson Dies from Effcts of Injuries.

Another mine fatality occurred Tuesday night, about 10:30 o'clock, when Charles Peterson met with an accident in the Strathmore mine. He and his mate, David Caslquist, was working in the drift which has been run about fourteen feet from the shaft, when some rock fell from the roof and struck the unfortunate man, breaking one of his arms and causing internal injuries. Peterson remained fully conscious and climbed the ladder to the top of the shaft and was carried on a stretcher to the Sisters' hospital, where he died early Wednesday morning.

At the inquest, which was held Wednesday afternoon, Caslquist gave evidence to the effect that the roof was known to be shaky, and the foreman, H. E. Shafer, had told the men to put in supports if they considered it necessary. As they were working on night shift, and as this work is usually done by the day shift, they did not carry out the foreman's instructions, and as a consequence, the accident occurred. The jury returned a verdict of accidental death.

The late Mr. Peterson was respected by all who knew him, and his tragic death is deeply mourned by a large circle of friends and acquaintances. He leaves a wife and two children to mourn his untimely decease. The funeral will be held from his late residence Saturday at 1 o'clock.

Mrs. Joan Smith of Beaverdell, is visiting in the city.

If you want to have an invigorating sea bath at home Write Bros. can supply you with the genuine sea salt in boxes at 50c each.

If you knew the value of Chamberlain's Salve you would never wish to be without it. Here are some of the diseases for which it is especially valuable: Sore nipples, chapped hands, burns, frost bites, chilblains, chronic sore eyes, itching piles, tetter, salt rheum and eczema. Price, 25 cents per box. For sale by all druggists.

RENDELL & CO.

Our Prices Sell The Goods!

OUR stock of staple and fancy dry goods for spring and summer is now complete, and we venture to say that it is the largest and most comprehensive ever shown in Greenwood.

IN Embroidered Lawn and Linen Waists we are particularly strong, all the latest styles and designs shown. In Silk Waists we are showing some extra nice values.

OUR Ready-to-wear department is very complete, our assortment of Mohair and Tweed skirts is particularly attractive.

IN Children's goods we have a nice range, some extra good values in Sailor and Buster Brown dresses. Come in, examine and be convinced.

A very dainty showing of Embroided Lawn and Linen Waists, long and short sleeves. From $1.50 to $5.00.

A very fine range of white and cream wash Silk Waists. Great values from $3.50 to $5 Ladies fancy and white Sunshades. We have a very large assortment from $1.50 to $5.00.

Our stock of Mohair Skirts is large, all styles and prices from $3.50 to $6.00

A nice line of children's dresses, Sailor and Buster Brown styles in Print, Gingham and chambray, from 45 cts to $1

We have a particularly fine range of children's sunshades, from 35 cts to 1.50

RENDELL & CO.

THE FRANKLIN MINES

A Promising Camp on the North Fork.

MANY RICH STRIKES

Two Railways Building.—Review of McKinley and Gloucester Groups. —Other Properties.

"With two railroads racing for Franklin camp, it is only reasonable to presume that that district is about to witness a season of unparalleled activity," says the Grand Forks Sun. "Both the Kettle Valley line and the Great Northern have had experts in that section for a year past examining the different properties, and it is, therefore, a safe supposition to assume that the potential tonnage of the camp will pay a dividend on the capital invested in constructing these roads.

"Aside from the mineral resources of the district, the agricultural possibilities of the North Fork valley would warrant the construction of a railway between this city and Franklin. The lumbering industry should also be an important item in furnishing tonnage. The Kettle Valley line has been located between Grand Forks and Franklin, with spurs to McKinley and Gloucester camps. Its length from this city to Franklin will be 43 miles, with a grade of less than ½ of 1 per cent to Franklin On the spurs, the grade, in one or two places, will be as high as 1½ per cent. There will be three bridges on the line, one at the foot of Third street, one near the Humming Bird mine, and another about 30 miles up the river. On the Great Northern the preliminary survey is now being made between this city and the Pathfinder mine, and it is expected that the road will be built that far this season.

FRANKLIN.

"Franklin townsite is beautifully situated on the west bank of the river, 43 miles north of this city. The ground slopes gently, affording perfect drainage. Twenty-eight blocks have been surveyed and placed on the market. The ground and streets have been cleared, and one hotel is now doing business in a tent. Lumber is now being hauled to the town for a large and modern hotel. A good wagon road is being rushed to the town by Road Supervisor Spraggett, who has 20 men in his employ. He is now within a mile and a half of Franklin, and expects to have it completed to that point three weeks hence. An excellent stage service is being maintained between this city and Franklin by A. Erskine Smith & Co. Up to the present time semi-weekly trips have been made, but after this week it will run every other day. The greatest asset of this townsite is the abundant supply of pure water. A mountain creek, flowing the entire year, runs through the northern portion of the townsite. This creek can easily be dammed 250 feet above the town, thus forming a natural reservoir and affording an unfailing water supply for domestic purposes and fire protection.

"A description of a few of the more important mining propositions will be of interest to our readers:

THE M'KINLEY.

"The McKinley group, comprising the McKinley, Hanna and Munster, is owned by the McKiney Mines, Ltd., and was the first property located in McKinley camp. It has been systematically worked for the past two years. The work done thus far consists of numerous open cuts, showing that the ledge on the surface is apparently 200 feet in width. A tunnel 220 feet in length has also been driven. One hundred feet from its mouth a 110-foot drift has been run, 70 feet being in ore. Considerable diamond drill work has also been done. From the face of the tunnel the drill has penetrated 193 feet of shipping ore, demonstrating that No. 1 ledge is 200 feet wide. The value of the ore in this ledge averages about 2½ per cent copper and $1.50 in gold and silver. No. 2 ledge has been sluiced on the surface, showing the vein to be 400 feet long and 15 feet wide. The ore in this ledge runs 7 per cent copper and $2.50 in gold and silver per ton. About 5,000 feet of diamond drill work has been done on this property during the present summer. With very little expense, the mine could be put on a permanent shipping basis. Ten men are at present employed on this property.

THE MAPLE LEAF.

"The Maple Leaf group, comprising the Maple Leaf, Twilight and Climax claims, is also located in Franklin camp, and is owned by the Fee brothers, of this city. Very little work has been done up to the present time. A 60-foot trench, from 6 to 8 feet wide, exposes a large quantity of high grade copper sulphide ore, with average values running about 5 per cent copper, $2 in gold and silver. While little can be said owing to the limited amount of work done, this looks like one of the bonanza copper properties of British Columbia.

THE BANNER.

"The Banner mine, across the gulch from the McKinley, was one of the first properties located in the North Fork country, having been staked in 1896. A shaft 20 feet deep is in $60 silver ore. A 200-foot tunnel, crosscutting 32 feet of $8 copper ore, has also been driven. This property is now under bond to the McKinley Mines, Ltd. A diamond drill will shortly be installed, and a great deal of development work will be done during the present summer.

THE GLOUCETER.

"This property is at present under bond to the Dominion Copper company. It has a shaft 50 feet deep, showing high grade ore. A 215-foot long tunnel has not yet reached the ore body. The Gloucester is considered one of the most promising properties in the camp. It is owned by local men. The G. H. belongs to the Gloucester group. It has a very good surface showing of 60 per cent magnetic iron, carrying small values in copper.

THE MINERAL HILL.

"On the Mineral Hill, opposite the Gloucester, there is one of the largest showings in the camp. A 200-foot long tunnel is now being driven to tap the ore body.

"The M. S., in Gloucester camp, is owned by A. Erskine Smith & Co. and local parties. It is looked upon as one of the most promising properties in the camp. It has a large iron cap, under which high grade copper sulphide ore has been found. Development work is at present being vigorously prosecuted.

OTHER PROPERTIES.

"Claims well worthy of mention are the Shaw group, John Morrell group, the Jumbo, I. X. L., the Dane group, the White Bear, and the Sweezey and Manhattan groups. There are other good properties in this district, but with the limited space at our disposal, it is impossible to enumerate them all, much less give them extended notice.

"Recently considerable excitement was caused by the finding of rich ore on the Copper and Riverside claims, located across the river from Franklin and owned by Dan Morrison and Joe Gelinas and Alex Oman. In an eight-foot iron capping big chunks of 15 per cent copper ore similar to that recently found in the Maple Leaf and M. S. were encountered. They expect to strike the ore body as soon as they get through iron capping. This portion of the camp is now being extensively prospected.

"The camp has a mineral area thirteen miles long by five miles wide. It is impossible to give full details of the work done in this vast district during the past year. Enough has been done, however, to demonstrate that Franklin has the making of the largest and richest camp in Southern British Columbia. Mining men of ability and experience are not lacking who assert that both Rossland and Phoenix will have to look to their laurels at no distant date.

"The predominating geological formation of the district is lime, porphyry, and conglomerate. It is difficult to understand how the camp has been overlooked so long. However, with the advent of shipping facilities, it appears almost impossible to paint the future of this favored section in too roseate colors. The credit for bringing this camp to the attention of capitalists, thus hastening its development, undoubtedly belongs to Geo. A. McLeod, the energetic mining promoter of this city. He has labored indefatigably for the past two years to attract foreign capital to the district, and has been eminently successful in his efforts. The establishment of a stage between this city and Franklin a few weeks ago by A. Erskine Smith & Co. has already added materially in making the camp known to the outside world.

"The most conspicuous advantages of this camp are: The superior tunnel facilities, the abundance of pure water, and the almost inexhaustible timber supply.

"Gloucester camp is four miles from McKinley, and Thunder Hill 25 miles northerly from the former. The latter is a high grade silver camp, and a trail will be built there this summer. It is about 20 miles westerly frow the Arrow lakes.

"It is estimated that there are over 150 men employed in the district at present."

HEAT OF DEEP MINES

In some places it has been found as much as 1 degree F. for each 45 feet in depth, in others little more than half this rate.

After about the first ten fathoms the varieties of surface temperature have no effect on that of the mine below which in the absence of chemical changes or of hot springs is always almost exactly the same. In deep workings, however, when they are first opened the temperature is often much higher than in the same situation after several months' working. Thus, at the Clifford Amalgamated Copper mines in Gwennapp, Cornwall, the air in the 220-fathom level was 100 degrees F. in 1863, but in July, 1864, it had sunk to 83 degrees. In the 130-fathom level, then just opened, the temperature at the same date, July, 1864, was 104 degrees F.

At the Duckenfield colliery in Durham, the temperature was found to increase for a depth of 20 feet down to 358½ fathoms at an average rate of 1 degree F. for each 88 feet in depth, At the Rose Bridge colliery, near Wigan, from a depth of 80½ fathoms to 403 fathoms the average increase was at the rate of 1 degree in each 67 feet. The latter is one of the deepest mines yet worked.

One of the greatest depths yet attained in Europe is at the Viviers Reunis, near Gilly, in Belgium, where the shaft itself reaches a depth of 3,411 feet, or nearly 570 fathoms, and the bottom of a "trial" staple was found by Mr. W. W. Smyth in 1871 to be 3,489 feet, or 581½ fathoms. - Mining Reporter.

PROSPECTOR'S GUIDE

A Classification and Description of the More Common Minerals.

(By A. Harry Hook, Assayer.)

With this issue, the Times begins a series of articles dealing with the more common minerals found in British Columbia, beginning with a key to the identification which will enable prospectors to more easily determine the identity of any mineral they find in the course of their prospecting. The present article deals with the series of minerals having a metallic luster. Next week's issue will deal with those having a non-metallic luster. Future articles will deal with the common minerals such as copper, lead, zinc, iron, gold and silver. These articles have been prepared by A. Harry Hook, assayer, of Greenwood. Mr. Hook has access to extensive information on these subjects. He is well acquainted with the more common minerals and their commercial values, having been engaged in the work of assaying for mines, smelters and custom assay offices for the past eight years. In his examinations for the provincial assayer's certificate for British Columbia he had the good fortune to pass first on the list with honors. His articles are, therefore, the results of close study and years of practical experience and will be read with interest. Any prospector who wishes to have a mineral identified can do so by leaving sample at Times office.—[Ed. note.]

It is often the case when a prospector is out in the hills that minerals are met with, which though probably common in the field of minerology, yet in certain localities are rare, and hence puzzle the prospector while in the field.

A method of determining these minerals will sometimes save a great deal of the prospector's time and probably put him on the better road to prosperity.

With this end in view, the writer has tried, from different sources of information, to simplify a table of field tests of the most important minerals, which will leave no doubt as to the identity, and yet will not encumber the prospector with a bulky outfit.

Too often confusion reigns as to whether, for example, molybdenite is graphite, stibnite is galena or bismuthinite, etc., etc., and if the following table will only help to clear these occasional obstacles from the prospector's path, the writer's object will have been accomplished.

Following this table of Field Tests will be given a series of articles on the more common minerals of gold, silver, copper, lead, zinc, iron, nickel, etc., found in Canada, their values, uses, compositions and occurrences, etc.

In working out the identification of a mineral intelligently always have a fresh fracture to test on. The letters O. F. is brief for oxidizing flame, R. F. for reducing flame. A description of these two flames will be of value. By holding the blowpipe just at edge of flame and a little above wick and blowing, a horizontal flame is produced which has two cones. The first is the inner of a blue color (R. F.), and an outer cone, which is nearly invisible at the end (O. F.) The heat is most intense just beyond the point of blue flame, and the mineral is held at this point when its fusibility is to be tested.

The outer cone (O. F.) has an oxidizing effect upon a mineral. This flame is best produced when the point of the blowpipe is inserted a very little into the flame and should be entirely non-luminous. The oxidizing effect is best obtained almost at end of the outer cone.

The inner flame (R. F.) tends to reduce a mineral (or takes away the oxygen of the mineral). This flame is best produced when the blowpipe is held a little distance from the flame and should retain its yellow color on its uppermost edge. The reducing effect is best obtained near the end of inner cone.

The borax bead tests are conducted as follows: Bend the end of the platinum wire into a loop about the size of two pin heads, heat in blowpipe flame and push hot wire into some borax, fuse and add more until the ring is filled with borax glass. Whilst hot touch bead to a little of powdered mineral to be tested and heat either in O. F. or R. F., according to test. Note colors whilst hot and cold. Very little of the mineral is generally required, and the experiment should be commenced with a minute quantity and more added if necessary. The tests on charcoal are generally conducted by mixing a little of the mineral with a little soda and moisten so that the mixture will not blow away from flame, and fusing on the charcoal with either the R. F. or O. F.

TESTING OUTFIT.

Pocket knife, small magnet, blowpipe, candle or tallow lamp, a little powdered washing soda, a little powdered borax, an inch or so of fine platinum wire, pair of forceps, piece of charcoal, small vial with little cobalt nitrate solution, also one for hydrochloric acid. The above can be simplified by one's own ingenuity, viz: The knife blade can be strongly magnetized, doing away with the magnet, charcoal can generally be picked up in the woods.

I—MINERAL HAS A METALLIC LUSTER.

(a) Yellow or yellowish color.

1. Only slightly scratched by knife:

Pale brass yellow. Iron pyrites.

Light yellow, weathers easily to rust and has an inky taste quite different than pyrites. Marcasite or (white iron pyrites.

2. Easily scratched by knife:

Mallable. Gold.

Magnetic; bronze yellow, surface often tarnished. Pyrrhotite.

Brass yellow with often a variegated tarnish. Chalcopyrite (copper pyrites.)

Bronze yellow, very bright, but not magnetic. Pentlandite.

(b) Red or reddish color:

1. Malleable. Native copper.

2. Not malleable:

Streak red; sometimes slightly magnetic, powder magnetic when heated in R. F. on charcoal or wood. Hematite (iron ore.)

Always with variegated purple tarnish, reddish on fresh fracture. Bornite (peacock copper.)

Plate-copper red, hard and heavy. Niccolite (nickel arsenide.)

Streak red about again as heavy as hematite. Does not become magnetic when heated on charcoal the same as hematite. Cinnabar (sulphide of mercury.)

Streak brownish red, shining blue borax bead. Cuprite (oxide of copper.)

Streak purplish red, color cochineal red to black, sometimes black to greyish black and by transmitted light deep red. Ruby silver (or antimsilberblende.)

(c) Grey or black color.

1. Scarcely scratched by knife:

Steel gray color, micaceous structure, streak dull red. Specular iron.

Streak black, magnetic. Magnetite (iron ore.)

Streak red, non-magnetic. Hematite (iron ore.

Streak, brown or blackish brown, scarcely a trace of magnetism. Titaniferous iron.

Streak, black or brownish black, green soda bead, generally contains water. Psilomelane (common form of manganese ore.)

Streak, dark reddish brown, slightly magnetic, brittle, with borax and soda on charcoal gives yellow deposit of zinc oxide when hot; gives reddish amethystine borax bead in O. F. Franklinite (manganese ores.)

Streak, brown or greenish, scarcely a trace of magnetism, no cleavage, gives green borax bead in O. F. (Chrome iron.)

Brown to black in color, hard, reduced on charcoal with soda to bright metallic tin. Cassiterite (tin stone.)

2. Easily scratched by knife:

Dark lead grey color, blue or greenish tarnish, heavy, resembles argentite sometimes, but much more brittle. Chalcocite (copper glance.)

Lead grey color, cubic cleavage. Galena, (lead sulphide.)

Blueish light grey, often with dark tarnish, sometimes good cleavage; fuses and swells almost as soon as point of blowpipe flame touches piece of mineral, this distinguishes it from galena. Stibnite (antimony sulphide.)

Light grey, soft, compact and granular; on charcoal in R. F. gives metallic globules and slight orange incrustation of bismuth oxide. Bismuthinite (bismuth sulphide.)

Mostly in scales or compact, marks on paper and has a greasy feel, infusible, iron black color. Graphite (carbon.)

Like graphite, but very heavy, steel grey, thin leaves resembling tin foil in appearance, and often occurs in bunches in granite, etc., very characteristic of mineral, gives odor of sulphur on charcoal with soda with blowpipe. Molybdenite.

Black or dark lead gray, malleble sometimes, cuts readily under the knife. Argentite (silver sulphide.)

Fibrous, black, soils fingers, sometimes steel grey and sometimes submetallic, borax bead gives an amethyst color in O. F. Pyrolusite (manganese oxide.)

Dull black or brownish color, earthy or compact, usually very soft, gives amethyst color with borax bead in O. F. Wad (bog manganese.)

Good cleavage, luster resinous or adamantine, colors generally black (black jack) and brown somewhat like resin. Spalerite (zinc blend.)

(d) White color.

1. Scarcely scratched by knife:

Silver white or pale grey color and heavy. Arsenopyrite (mispikel.)

White or pale yellow, exposed surface a darker yellow and notably tarnished. Pyrite or marcasite.

2. Easily scratched by a knife:

Malleable and often tarnished. Native silver.

RECKLESS SHOOTING

North end residents are complaining that their peace of mind is frequently disturbed by the reckless shooting of irresponsible Sunday sports who hunt gophers and other small game in the northern limits of the city. The suffering ones claim that young boys, and boys who are not young, spend their Sundays carelessly and indiscriminately shooting with twenty-two rifles at every wild thing in sight and sometimes they have come perilously near wounding human beings and domestic live stock. It is related that last Sunday a man was drawing a pail of water from his well when a bullet struck the frame work of the windlass, and that several bullets passed over and close to his residence, It is not alone from one resident that the complaints have been heard, but several have mentioned it and others have suffered in silence.

It is not for a moment supposed that any shooting has been done with intent to harm or even to frighten, but the narrow escapes recorded are probably the result of carelessness on the part of those who choose to pass their Sundays with the gun. For this however, there is no excuse. Carelessness in handling firearms has cost many a precious life, and there is no guarantee that serious results will not arise out of the present careless shooting.

The use of firearms within the city limits by anyone except a police officer, is prohibited by law, and those who have been thoughtlessly making life miserable for Greenwood's citizens may expect to be dealt with accordingly.

PACKING-HOUSE REVELATIONS,

The conditions revealed in the Chicago packing houses shock and disgust the whole civilized world. The irresponsibility that causes corporate enterprises to be regarded as "soulless," seems to have forced economies on all departments at the expense of cleanliness and the common demands of health and sanitation. No man likes to give diseased, tainted or adulterated meat to his fellows to eat, but the demand of those in financial authority for the minimizing of waste and the increase of returns from high-priced products has naturally and inevitably produced the deplorable results disclosed by the recent investigation. Carcasses that should have been thrown away were used and sold as food, the substitution of inferior meats was freely practiced, and various dyes, preservatives and other deleterious substances were used to conceal the deceptions, while the demands of sanitation were disgracefully neglected. All these practices through which the public health has suffered were the result of the pressure for more profits.

It will be most fortunate if the hurried cleaning up and spasmodic reforms that follow the exposure are regarded as satisfactory. If the public settle down into their former complacency it will be but a short time till the demand for economies and increased returns bring back the conditions now hastily changed. With the crowding of population into large industrial and commercial centers has come an absolute dependence on a few corporations for a daily food supply. In such dependence the public are helpless, and they have lessened their chances of accidental relief by such restrictions as the protection tariff and local market regulations. The various essentials of daily food are in many cases so completely controlled by organized and affiliated corporations that the public have no resource but to accept what is offered and pay the price demanded. Even where there is no monopolistic control it is impossible for the people in their individual capacity to protect themselves. It is as necessary for people to act in their collective capacity in protecting themselves against unclean or dangerous food, as against contagious diseases, unsafe buildings, or dangerous public conveyances. The evils and dangers of unclean and adulterated food have been calmly tolerated while less serious menaces have been carefully restrained. We see that steamboats are inspected, that every building erected on our streets conforms to architectural requirements of safety, that churches, theaters and public halls have proper means of exit, that cellars and yards are cleaned, and that garbage is disposed of in a safe and sanitary way. But while all these necessary precautions are carefully enforced, the most important matter of all—the food supply—is left to chance and the greed of those controlling its distribution. This is a mistake that should be remedied at once.

That Canadian cities have not suffered in a similar way is due to accident, and not to any superiority in public supervision. We are no holier than our neighbors, and the same conditions and same freedom from public supervision may bring the same results here as there at any time. We must move in the matter before and not after abuses develop. With such food supplies as can be inspected by chemical analysis, the existing machinery, if put in motion and kept in motion, can afford efficient safeguards. But with regard to canned and prepared meats Chicago has learned by experience that thorough and continuous official supervision is essential to public safety. In this respect we should profit at once by the experience of our neighbors.—Toronto Globe.

The hard water here can be made delightfully soft and refreshing by using White Bros. Violet bath powder—25c box.

FOR SALE BY TENDER.

Sealed tenders marked Tenders for sale of mining stock" will be received by the undersigned up till 12 o'clock m. of Thursday the 21st. June instant for sale of 3000 shares in the Bounday Elkhorn Mining Company Ltd. The highest or any tender not necessarily accepted.

A. G. Larson superintendent of the Le Roy mine was in the city a few days on business

The latest novelties in purses and leather goods are to be seen at White Bros.

Drop into White Bros. and ask to see the soaps epecially manufactured for hard water.

W. G. Gaunce has returned to Greenwood and will now be permanently located here.

Earnes Mills, of Keremoes is visiting at the home of his sister Mrs. Alex Robinson.

Pond's Extract Soap and all other good goods, are at Thomas', the quality store. Watch our ad. space.

J. S. Billings of Nelson, secretary of the Yale-Columbia Lumber Co., visited the local office this week.

F. W. Guernsey of the Trail smelter visited Greenwood this week and inspected the mines hereabout.

The "Mikado Festival" has been pronounced the best thing of the kind ever held in Greenwood.

Robert Wood has been spending a few days on the West Fork inspecting the Sally mine.

David Wilson, of Victoria, inspector of schools was here superintending the examinations in the public school this week.

Mrs. Kinney, who has been spending the winter months in Seattle, has returned to Greenwood and is living at the home of her son Charles.

The local manager of the Yale-Columbia Lumber Co., Mr. Tait, reports business good and he expects to see it better before the summer season closes.

There will be a meeting of the Liberal association Thursday, June 21, in J. R. Brown's office. Important business.

The Elkhorn Brewery has been sold to John Docksteader and the formal transfer of the business took place Thursday.

On account of interrupted telephone communication with Boundary Falls it was impossible to get Dominion Copper Compmy mine and smelter returns for this week.

Several members of the C. E. society of the Presbyterian church drove to Eholt Sunday evening and held services in the church there. The meeting was well attended.

The late proprietors L. and A. Portmann, will take a holiday in the south and afterwards will devote their full attention to their numerous mining interests.

Miss Read, who for some time has been the guest of Mr. and Mrs. W. G. McMynn, left Monday for her home in Bobcaygeon, Ontario. Miss Read was one of the ladies who took a prominent part in the rendition of "Between the Acts" by the Greenwood Amateur Dramatic company and her removal from the city is a distinct loss to the local company of artists.

Dr. Simmons, Dentist; Open evenings.

Miss Nannie Strachan, the talented Scottish soprano soloist, will appear in Greenwood with Gavin Spence, the Edinburgh tenor and entertainer, on June 28th.

FOR SALE—Riding, driving and work horses. Standing at Midway the stallion "General Dewey" $8.00 for the season. Stook Bros., land and stock dealers, Midway.

Robert Riddell and J. E. Stevens of Minneapolis, friends of W. T. Hunter spent a few days this week looking over the business outlook in Greenwood and vicinity.

The first payment on the Capital Prize, recently bonded by eastern capitalists was made this week by G. W. Cornish. The bondholders are preparing to carry on work on an extensive scale in the future.

A. McClelland, traveling representative of the Winnipeg Commercial, well known as Western Canada's leading trade journal, visited Greenwood last Saturday and spent Sunday and Monday with former Winnipeg friends. Mr. McClelland has just completed a tour of British Columbia and was much pleased with the evident prosperity of Greenwood and the Boundary district.

THE NICOLA LINE

Construction Will Be Completed This Month.

VANCOUVER, B. C., June 14.—After a year's steady work on construction, the branch line of the Canadian Pacific Railway in the Nicola Valley, will be ready for acceptance about the 1st of July, as far as Coutlee. The remaining six miles to Nicola Lake will be constructed this year, final plans for which are now being prepared. Freight is now being carried over the line.

The completion of this new branch marks another step in the policy of the C. P. R. for the development of the Province. It will bring Coutlee within ten hours' run of Vancouver, obviating a 40 mile stage ride to Spence's Bridge, the point of junction.

Construction has been done under contract by Messrs. Loss, Macdonell & Company, with whom are interested Robert Kelly and E. J. McFeely, of Vancouver. James A. Macdonell of the firm, has had personal charge of the work, and has been assisted by C. S. Gzowski. The work will cost about a million dollars.

Ranching has been the chief feature of life in the Nicola Valley up to the present, but with railway transportation an impetus will be given to mining. Large and valuable properties, principally copper, are located along the line, and several coal propositions will probably be immediately developed.

Coal deposits are one of the mineral riches of the Nicola and Similkameen districts. Standing on the track at Coutlee, one can see Coal Gully, where an opening has been made into the coal measures owned by Vancouver people. They are just across the river, and a side line will probably be built over to facilitate shipment. But a short distance away is the coal of the Nicola, Kamloops and Similkameen. Coal and Railway Company. Fifteen miles from Nicola Lake, and on the direct route of the railway, is the Diamond Vale coal property at Quilchena. In all these Vancouver people are interested, and their development will be of much benefit to the country.

MINING MEN INTERESTED.

Coal, however, is perhaps the least of the mineral wealth. Ten Mile creek joins the Nicola river at Lower Nicola, and twelve miles up the valley are valuable copper propositions. The attention of the Guggenheim syndicate has been directed to these, and these noted mining capitalists have considered the prospect so favorable that a second expert is being sent out by the organization to make a further report. If these properties are taken in hand by a company with capital enough to develop them thoroughly, it is said that the operations of the Granby company will be repeated, so extensive and valuable is the ore. It is low grade, but there is plenty of it. Campbell Johnston, M. E., well known in Vancouver, is negotiating the deal.

Aspen Grove is one of the principal camps which will progress with the impetus given to mining by the railway. The mineral area is about nine miles in length, and is located on the summit of the divide between the Nicola and Similkameen. Seven hundred and eighty claims are located. Native copper has been shown in Vancouver from thd Golden Sovereign group, which was lately disposed of to R. J. Inglis of Montreal, by J. McConnell. The shaft on this property is down 30 feet, and the showing of native copper is very good. The purchaser of the Golden Sovereign did not think $110,000 too good to pay, and mining men say this will be counted a small figure when operations reveal the extent and richness of the ore. This can p should furnish a large tonnage, and development will mean a new town in the interior. Under conditions up to the present it has been impossible to successfully open up good mining claims. From Aspen Grove, for instance, it is 14 miles by a wagon road over the hills to Coutlee, which is 40 miles from Spence's Bridge. Transportation by wagon that distance would leave little profit, even though the ore were very valuable. With a railway, not only will the cost be reduced, but the trip will occupy but a short time.

SHORT RUN FROM VANCOUVER.

When completed, the end of the line will be only ten hours' travel from Vancouver, and it is not improbable with the many scenic advantages and the excellent fishing and shooting, that Summer hotels will be erected at Lower Nichola, Coutlee and Nichola Lake to accommodate those who may wish to rest awhile in this pleasant vale. It will make one of the nicest of short trips from the Coast cities, and taking so little time, with great resultant benefits, many will make this an objective point.

Already freight is being taken into points asfar as Countlee, which is a great convenience to settlers along the line. Heretofore stages have run twice a week each way, but with the present facilities the forty miles' drive will new be obviated, and a quicker, cheaper, and more comfortable means of transportation afford ed.

The Bank of Montreal has anticipated the development of the Nicola, and has established a branch at Nicola Lake, which point the railway will shortly reach. This settlement is growing larger daily, and already has an enterprising weekly paper, edited by Ric. A. Frazer.

NOTICE

NOTCE Is hereby given that the undersigned have disposed of the business heretofore carried on by them as brewers under the name and style of the Elkorn Brewing Company to John Docksteader, who will hereafter continue the said business under same name and style from and after the date hereof.

All persons now indebted to the said Elkhorn Brewing Company are required to pay the several amounts of their indebtedness to the undersigned forthwith,

All persons having claims against the undersigned are required to submit statment of account and the amounts thereof will be paid by the undersigned, who will not hereafter be responsible for any debts contracted in the name of the Elkhorn Brewing Company.

Dated at Greenwood, B. C., this 14th day of June, A. D., 1906.

LAYING THE STEEL

Getting Ready to Run Trains on the V., V. & E.

MIDWAY, June 14.—Track laying from Midway westward on the V., V. & E., which has been eagerly looked forward to for months, has at last commenced. The delay in starting has been caused largely through waiting for the completion of the long tunnel at Myers Creek canyon, but at the rate work has been proceeding for some time that will have been finished some days ago. The track laying machine is proving a great help in the work of laying the steel.

"The rate of the machine," says the Hedley Gazette, 'is a little better than a mile a day, but as there are several bridges that will delay the work a day or two each. it is claimed that the speed of the machine while working will more than offset the aggregate of these delays and that for the whole distance from Midway to Keremeos, the average of a mile a day will be maintained.

"The steel is Canadian made and is being supplied from the Soo works, although it is understood that the stringency of the United States tariff laws will compel the use of American steel for the 49 miles of the road that lies to the south side of the boundary, between Molson and the point where the railway recrosses the line into British Columbia on the Similkameen.

"The only thing in the way of material that is still lacking to complete through to Keremeos is that of ties for the portion west of Molson. There is a shortage of ties on this end which it is hoped will be made up by the time that the track reaches Molson.

"Another thing that is making them rush the work of track laying on the section between Midway and Molson is the fact that the contractors are kicking against the long haul in bringing outfit and supplies from Midway for work along the Similkameen. With the tracks completed to Molson, the heavy pull over the divide from the Kettle river to the Okanagan will be done away with.

GRAND FORKS AMBITIOUS

Expects to Be Made Divisional Point for Great Northern.

Grand Forks is looking eagerly forward to becoming the divisional point for both the Great Northern and the C. P. R., and with the building of the Kettle River Valley railway, on which active construction work was started by Contractor W. P. Tierney & Co. last Monday, the Forks looks forward to becoming the leading railway center in the Boundary. The first announcement of the proposal of the Great Northern to move its divisional point from Marcus to Grand Forks was received with some degree of doubt, but the Grand Forks Sun insists that the report is true and says:

"It is stated that the determination of the Great Northern to move its divisional point from Marcus to this city, has been found advisable by the Hill interests to extend the North Fork extension to the Franklin camp. It i stated that the proposed improvements at Grand Forks will aggregate $50,000. They will include not only a large roundhouse, machine shop and extensive yard trackage, but many minor buildings necessary to a divisional point. It is stated that another reason for the Great Northern road in moving its division point from Marcus to Grand Forks is to make it nearer half way between Spokane and Vancouver, to which point the V., V. & E. is now building from Grand Forks. Already the line is in operation from Grand Forks to Midway, and has been surveyed permanently as far west as Princeton. Construction work on that branch is now under way, and surveying crews are at work in the field between Princeton to Vancouver. By July 1 it is expected that grading crews will be at work on the extension of the Great Northern from Grand Forks to the Pathfinder mine. The work will probably be done by contractors who have either completed or are about ready to turn over to the Great Northern completed grading west of Midway."

Unknown Friends.

There are many people who have used Chamberlain's Colic, Cholera and Diarrhoea Remedy with splendid results, but who are unknown because they have hesitated about giving a testimonial of their experience for publication. These people, however, are none the less friends of this remedy. They have done much toward making it a household word by their personal recommendations to friends and neighbors. It is a good medicine to have in the home and is widely known for its cures of diarrhoea and all forms of bowel trouble. For sale by all druggists.

In the stamp milling of very fine rock, it will be advisable to use a short and rapid drop with slow feed. This will keep the fine particles in suspension in the practically running water which carries them through the screens, and is much preferable to the slower and higher drop which produces more fines.

The addition of small quantities of hydrochloric acid is one of the most important advances made in the electrochemical refining of copper. By its use it is possible to utilize the high current densities now so common. Antimony passes completely into solution but is not deposited so long as the electrolyte remains normal.

How to Break Up a Cold.

It may be a surprise to many to learn that a severe cold can be completely broken up in one or two days' time. The first symptoms of a cold are a dry, loud cough, a profuse watery discharge from the nose, and a thin, white coating on the tongue. When Chamberlain's cough remedy is taken every hour on the first appearance of these symptoms, it counteracts the the effect of the cold and restores the system to a healthy condition within a day or two. For sale by all druggists.

SUNDAY SERVICES.

CATHOLIC.—Church of the Sacred Heart.—Divine service 1st, third and fourth Sunday in each month. Holy mass at 10 a. m.; vespers and benediction at 7:30 p. m.; Sunday school at 2:30 p.m. REV. J. A. BEDARD, O. M. I., pastor.

ANGLICAN—St. Jude's. Rev. John Leech-Porter, B. D., pastor. Services at 8 a. m., 11 a. m. and 7.30 p. m.; Sunday school, 2:30 p. m. All seats free, Midway, 2nd and 4th Sunday each month at 3:30 p.m. Phoenix, 1st and 3rd Sunday each month at 3:30 p. m.

PRESBYTERIAN—St. Columba, Rev. M. D. Mckee, pastor. Services 11 a. m. and 7:30 p. m.; Sunday school 2:30 p. m.

METHODIST—Rev. H. S. Hastings, pastor. Services at 11 a. m. and 7:30 p. m.; Sunday school, 2:30 p. m.

Synopsis of Canadian Homestead Regulations.

ANY available Dominion Lands within the Railway Belt in British Columbia, may be homesteaded by any person who is the sole head of a family, or any male over 18 years of age, to the extent of one-quarter section of 160 acres, more or less.

Entry must be made personally at the local land office for the district in which the land is situate.

The homesteader is required to perform the conditions connected therewith under one of the following plans:

(1) At least six months' residence upon and cultivation of the land in each year for three years.

(2) If the father (or mother, if the father is deceased), of the homesteader resides upon a farm in the vicinity of the land entered for, the requirements as to residence may be satisfied by such person residing with the father or mother,

(3 If the settler has his permanent residence upon farming land owned by him in the vicinity of his homestead, the requirements as to residence may be satisfied by residence upon the said land.

Six months' notice in writing should be given to the Commissioner of Dominion Lands at Ottawa of intention to apply for patent.

Coal lands may be purchased at $10 per acre for soft coal and $20 for anthracite. Not more than 320 acres can be acquired by one individual or company. Royalty at the rate of ten cents per ton of 2,00 pounds shall be collected on the gross output.

W. W. CORY,
Deputy of the Minister of the Interior.

N.B.—Unauthorized publication of this advertisement will not be paid for. 32-59

MINERAL ACT

Certificate of Improvements

NOTICE

"Prince of Wales" and "Princess Louise" Mineral Claims, situate in the Greenwood Mining Division of Yale District.

Where located: In West Copper Camp.

TAKE NOTICE that I, C. Æ. Shaw, as agent for Lewis Bryant, Free Miner's Certificate No. B90233, James Gillis, Free Miner's Certificate No. B86219, John M. Campbell, Free Miners Certificate No. B86220, Mark Kay, Free Miner's Certificate No. B91479, and Robert Lee, Free Miner's Certificate No. B86165, intend, sixty days from the date hereof, to apply to the Mining Recorder for certificates of Improvements, for the purpose of obtaining Crown Grants of the above claims.

And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements.

Dated this 29th day of March, A.D. 1906.

31-39 C. Æ. SHAW, P. L. S.

Corporation of the City of Greenwood.

Collectors List of Lands or Improvements or Real Property Within the Corporation of the City of Greenwood.

To be sold for taxes, interest, costs and expenses on the 23rd day of July, 1906 at the City of Greenwood, B. C., at the hour of 10 o'clock in the forenoon pursuant to the "Municipal Clauses Act" and By-law No. 117 of the Corporation of the City of Greenwood.

VALUABLE PROPERTY

"Thos. Farrell of Keremeos, came in Wednesday from that place, bringing in the news of a recent strike of high grade ore carrying copper, gold and silver on the Anaconda and Last Chance properties, situated near Richter's pass," says the Oroville Gazette. "There is a tunnel on the property which has been driven 65 feet on a 12-foot lead and is in ore averaging $27 to the ton for the entire distance, from portal to face.

"A party of Spokane mining men are expected in shortly to inspect the property with a view of purchasing it outright instead of taking a working bond, believing the property of sufficient merit to need no further examination in the nature of development before closing the deal.

"The property in question has one unique advantage over many others, in that it lays between two lines of railroads, the V., V. & E. on the south, and the Canadian Pacific on the north. The former road has already commenced construction, and the latter has made surveys and expect some time to build the road, which would greatly enhance the value of the claims tributary to both roads.

"Good accommodations can be secured at the Moyes hotel and we expect before long to hear some good news from that neighborhood.

THE MERCHANTS CORNER

Advices from New Westminster say that dealers and others are predicting that the strawberry crop for the present season will not be equal to the demand, and that the prices will be higher this year than has been the case for several seasons past.

The crop generally is not as heavy as usual, while the demand is greater, and it is not anticipated that the growers will lose anything owing to the shortage of berries, for what they lose in quantity they will make up in price.

Various reasons are assigned for a short crop, but the principal was the severe cold snap in March when many of the blossoms were frozen, while the recent heavy rains have also tended to lessen the supply of good berries.

Local berries are now being offered for sale at local stores, and they are being received from Coquitlam, South Vancouver, Mission, Maple Ridge and other districts, but the offerings are far short of the demand. Should the weather be fine for several days, the supply would greatly increase.

LOWER COLUMBIA FRUIT.

R. M. Palmer, secretary to the Provincial Bureau of information, has returned from an extended tour of observation through the lower Columbia valley, in the vicinity of Windermere and Wilmer.

This district, Mr. Palmer says, has a great future before it in the growing of hardy tree fruits and berries. The building of the V., V. & E railway will provide the necessary transportation facilities, and settlers are looking forward with great hope to the future. Land which was formerly devoted to feeding stock, and a small amount of mixed farming, is rapidly increasing in value, the old half and quarter section tracts being subdivided into smaller areas for fruit culture. It is especially adapted for the growing of small fruits, and as the season is somewhat later than in other berry-raising districts, the crop will be reaped at a time when the Windermere and Wilmer farmers will practically have the market to themselves.

Already a good start has been made toward what will certainly develop into a most thriving industry. Rufus A. Kimpton, formerly a merchant of Donald and Golden, has 1,800 trees bearing, being the pioneer in the Windermere district. Mr. Palmer is quite enthusiastic over the prospects, and holds the opinion that as soon as new settlers are attracted both the places mentioned will become very thriving communities. The great drawback—want of transportation—will soon be overcome, and as there is quite a large area available for cultivation, the lower Columbia valley will, in a short time, be able to supply the markets of the Kootenays. Irrigation is possible on many of the tracts at comparatively small expense.

THE COPPER AGE

Twenty five years ago the United States produced 27,000 tons of copper. The production during 1905 was practically 400,000 tons, or more than half of the world's total supply. The value of last year's output may be given as $160,000,000.

The uses of this metal are steadily growing. It is estimated that by 1920 the requirements of the world will reach 1,500,000 tons. The United States will probably hold its present place in the market. New deposits are opened from time to time. There are known districts yet undeveloped in the western mountains, and Alaska is rich in copper, Mexico and Canada are copper countries, and send the United States ore and matte for smelting, and pigs, bars and ingots for manufacture.

The increasing supply of the metal promises to keep prices within reasonable bounds, while the increasing demand fairly assures ample profits to the owners of copper properties. No available substitute has yet been found for its use for electrical purposes, and the employment of electricity increases from year to year. The day of copper has come, and there is every reason to believe it will be a long day.—New York Sun.

THE COPPER MARKET

Walker's copper letter in the Boston Commercial says: Copper continues very strong, with foreign and domestic prices showing a decided tendency to harden. Lake is held at 18⅞ to 19 cents per pound; electrolytic is 18⅝ to 18¾ cents; casting is 18⅜ to 18½ cents per pound.

Pianos polished to look like new Thompson & Rowston. tf

SUCCESSFUL SOCIAL

Large Crowd Attends Festival —Good Program and Refreshments.

As a social and financial undertaking the "Mikado Festival." held last night in the Wallace-Miller block under the auspices of the Presbyterian church, was an eminent success. The crowded condition of the building and the consequent discomfort of those who were forced to stand, was the result of underestimating the possibilities of the function. At all times during the evening the hall was filled to its utmost capacity and the daintily attired ladies in their kimonias had difficulty in properly serving their many guests, but they did the best they could. The refreshments were first-class, and there was a heavy run on the ice cream and strawberries.

The program, though rendered under some difficulty at times, was thoroughly enjoyed by most of the large audience. Murdock McQuarrie's gaelic songs were especially popular. N. F. Kendall rendered two pleasing solos well suited to his finely modulated voice. A. M. Whiteside caught the popular fancy with his selection and Mrs. Oliver sang pleasing Southern melodies. Mr. Hopkins rendered a banjo solo in his usual good style and Mrs. McCutcheon's and Mrs. Oliver's piano duets were much enjoyed.

Much of the success of the program was due to the skillful management and humorous speeches of the chairman, W. G. Gaunce.

With much care and display of artistic taste the ladies of the church had decorated the hall with flags of many nations including Great Britain, United States and Japan. The walls were festooned with cut paper and flags, and the tables and platform were handsomely dressed with cut flowers. The ladies are indebted to Nelson friends for the flowers. Chinese lanterns were hung from the ceiling and added their soft glow to the brilliant scene. The financial returns were well in keeping with the success that marked the other features of the festival and will exceed one hundred dollars net.

During the early part of the evening the Citizens' band rendered several fine selections. Much of the success of the affair was due to the kind assistance of this excellent organization, and those in charge of the program are much indebted to the boys in uniform.

WORK HAS STARTED

Fifteen Teams at Work on Kettle Valley Line.

Work started last Monday on the Kettle Valley River railway from Grand Forks to Franklin. The first sod was turned by Foreman McDonald on Frank Miller's ranch, when fifteen teams and a number of laborers were put to work. The force of men engaged is not as large as the contractors would like, but men are scarce and cannot be readily secured. It is expected, however, that the difficulty will soon be overcome, as men with horses and mules are arriving from Winnipeg and Chicago. When a full working force has been secured the construction camps will stretch along the whole line of the road. The right of way through William Glenmore's ranch at the head of Smelter lake has been secured. W. P. Tierney, the contractor, is in Grand Forks superintending the work, and construction will be rushed with all possible speed.

DECISION RENDERED

The Case of Hill vs. Granby Co. Is Finally Settled.

The case of Hill vs. Granby Co., which was tried in Nelson last February, was finally settled this week when decision was handed down by Mr. Justice Duff. The case arose out of the death of Vernon Hill, who was killed in the Knob Hill mine at Phoenix by striking his head against the mouth of No. 2 tunnel while standing on the platform of an ore car. Action was brought by deceased's parents for damages. S. S. Taylor of Nelson, was counsel for plaintiffs and A. M. Whiteside of Greenwood, for the defendant company. The defendants contended that the accident was due solely to carelessness on the part of the unfortunate man in standing in a position which was almost certain to cause death.

Justice Duff took the case from the jury, dismissing the action for damages. Counsel for plaintiffs asked that compensation be assessed under the Workingmen's Compensation Act. This was opposed by Mr. Whiteside on behalf of his clients on the ground that no compensation could be granted where the accident was due solely from the "serious neglect" of the deceased.

The decision just rendered is interesting from the fact that it is the first case in which an authoritative interpretation of the section in the act respecting a company's liability has been obtained.

A HISTORY OF B. C.

"British Columbia Illustrated," is the name of a book just received from the publishers, The Lewis Publishing Co. of Chicago. It combines a brief history of the province with short biographies of the leading professional and business men who have contributed and are contributing largely to the upbuilding of the material prosperity of Canada's richest province. Twelve chapters are devoted to past and present history. The reader is taken back to the time when the Spanish adventurers of the sixteenth century first explored the long Pacific coast line. Among the Spanish explorers mentioned are Cortez, Pizarro and Cabrillo. Intrepid Englishmen also figure prominently in the early discoveries, and John Oxenham, one of the characters in Charles Kingsley's "Westward Ho," is credited with being the first Briton to sail the broad Pacific. Sir Francis Drake's expeditions also played an important part in the explorations of the North American coast line.

The straits of Juan de Fuca and Georgia were first explored by a Greek pilot, Juan de Fuca, in 1692. Juan was in the employ of the Spaniards and reported the lands visited rich in gold and silver. Considerable attention is paid to the modern history of the province and the book is illustrated with half-tone engravings of leading men and typical scenes of farm, sea and mine.

A number of Greenwood people appear in the list of leading provincial men, among them being J. R. Brown, M. P. P., J. J. Caulfield. Dr. G. M. Foster, K. C., B. Frith, W. G. Gaunce, J. P. Myers Grey, W. M. Law, W. G. McMynn, Dr. S. S. Oppenheimer, George A. Rendell, Dr. Spankie, A. M. Whiteside and Robert Wood. Among public men widely known are Richard McBride, Robert G. Tatlow, Robert F. Green, J. H. Turner and F. J. Fulton.

The book is heavily bound in black leather and presents a pleasing appearance.

William Birrell, who was arrested last week for issuing checks without having any bank account, appeared before Stipendary Magistrate McMynn last Tuesday and was sent up for trial. The prisoner elected to be tried summarily before Judge Clement at the next sitting of court here.

If your stomach troubles you do not conclude that there is no cure, for a great many have been permanently cured by Chamberlain's Stomach and Liver Tablets. Try them, they are certain to prove beneficial. They only cost a quarter. Sold by all druggis ts
