NEW ELECTRIC PLANT

Local Light Company Propose to Build One

AT BOUNDARY FALLS.

City Council Is Approached and By-Law to Be Submitted to the People—Cost $40,000.

That Greenwood will have another important industry added to its growing interests promises to be the outcome of a proposition now being considered by the city council. While the present electric light service is considerably better than is said to be served to the citizens of less favored towns in Southern British Columbia, it is not all that could be desired and both the public and the electric light company would welcome any change in conditions whereby it would be possible to bring the service up to a standard more in keeping with the growing needs of the city.

With this end in view the Greenwood Electric company, limited, submitted to the city council last Monday night a proposition as outlined in the following letter:

Greenwood, B. C., March 27, 1906.

To the Mayor and Aldermen, Corporation City of Greenwood, Greenwood, B. C.

Dear Sirs: The Greenwood Electric Company, Limited, at present engaged in the lighting and power business in Greenwood, is desirous of adding to its plant, with the idea of making its industry purely local, instead of buying power from the large operating companies, as at present.

I estimate the expenditure in the extensions contemplated to amount to not less than $40,000, to be expended in the installation of a modern water power plant of high efficiency at Boundary Falls. While I may say that our lighting system as at present is more satisfactory than that of many surrounding towns, this result has been arrived at by considerable expenditure on our part by raising the voltage above the standard delivered to us by the Cascade Water, Power and Light company. With our own plant at Boundary Falls, I can assure you that we will deliver as good light as we did when running our steam plant, and I believe we must all agree that as far as voltage regulation was concerned it was far superior to our present light.

Before undertaking the expenditure of this amount of money, we would ask to have the assurance of the corporation of the city of Greenwood that we will be allowed to continue in business for a definite term of years, and would accordingly suggest the following arrangement:

The city council to pass a bylaw granting to the Greenwood Electric company a privilege of using the streets for the general purposes of its business, for a period of twenty years; the Greenwood Electric company, on its part, to install at Boundary Falls a first class plant of adequate size to supply the needs of the city in lighting and power units. This plant we will agree to have completed and in running order within eight months of the passage of the bylaw.

This franchise will be of no effect unless we carry to completion the proposed plant mentioned.

At any time after the expiration of five years from the passage of the franchise bylaw we will agree to sell out entirely to the city, under the terms of the Arbitration Act.

I think you will agree with me that this project is in the interests of the town, not so much in the initial expenditure, as in the continued payment of maintainence charges and wages, most of which equivalent expenditure is at present sent away from town for power, and also in the feature of better regulated voltage.

Hoping that you may be able to discuss this matter shortly, I remain,

Yours very respectfully,
Greenwood Electric Co. Ltd.
E. G. Warren, Manager.

As pointed out in the foregoing letter, the source of light for Greenwood is in some outside company which is the Cascade Power and Light Co., with a plant at Bonnington Falls. The proposition aims to make the production of power a local one so that the money now paid by the corporation of Greenwood and the citizens will not go to support a firm having no interest in the town, but will assist in developing what will really be a local industry even if it be located three miles outside the city limits. The proposed plant will cost in the neighborhood of $40,000. Before making an investment of this kind the company desires to secure the right to continue using the city streets, as at present, for a period of twenty years, guaranteed by the passing of a by-law and voted upon by the public. The proposed agreement gives the city the right to purchase the company's plant after the expiration of five years, but in no way prevents the city from erecting at any time a municipal plant. It further provides that unless a plant is completed the twenty year franchise for the use of the streets becomes null and void. The franchise is not exclusive. A by-law is now in preparation and will be considered at the council meeting next Monday night.

MANAGER'S STATEMENT.

Speaking with E. G. Warren, the manager of The Greenwood Electric Co., The Times learned that the company are anxious to start work just as soon as the by-law has been passed and ratified by the people. Mr. Warren estimates that the plant can be completed in eight months, and ready for operation. Should the council and the people pass the by-law the new plant would be in operation, barring accidents by January 1st, 1907.

Asked as to the supply of water at Boundary Falls, Mr. Warren stated that he was satisfied that it was sufficient and that an auxiliary steam plant would not be needed even in the driest of seasons. It is possible to secure a head of 140 feet and that reinforced by reservoirs at suitable places would give absolute control of the Boundary creek water and ensure ample power to light the city. Mr. Warren looks forward to being able to improve the light service both for streets, business houses and residences.

LOUIS GREENWOOD.

Former Resident Dies Suddenly in California.

San Diego, Cal., March 24.—At about 7:30 o'clock Saturday morning Louis Greenwood, a carpenter living in a lodging house at the corner of E and Front streets, was found dead in bed in his room.

About $165 in gold was found in his room.

During the night other people in the house heard Greenwood moving around and knew that he was ill, but they did not think that he was attacked fatally. As he did not appear at breakfast time, and the main door to his room was found to be locked, a friend of his then entered through a side door and found that he was dead.

Death was thought to be due to heart disease or apoplexy, and it stated that there seems to be no suspicious circumstances connected with the affair. He was unmarried.

Greenwood was about 54 years of age and came to this city about two years ago from British Columbia. He was a very quiet man, and had the best of reputations.

The above account of the death of Louis Greenwood was published in the San Diego Sun. The late Mr. Greenwood was well known in the Boundary district some five years ago when he was employed by Christopher Wood in building a number of Mr. Wood's houses. At one time he ran a steamboat on Okangan lake known as the "City of Greenwood."

Chamberlain's Salve

This salve is intended especially for sore nipples, burns, frost bits, chapped hands, itching piles, chronic sore eyes, granulated eye lids, old chronic sores and for diseases of the skin, such as tetter, salt rheum, ring worms, scald head, herpess, barbers' itch, scabies or itch and eczema. It has met with unparallelled success in the treatment of these diseases. Price 25 cents per box. Try it. For sale by All Druggists.

MIDWAY FRUIT LAND

Company Formed to Irrigate Large Tract

HAS $100,000.00 CAPITAL

Will Utilize Kettle River and Rock Creek Waters – 2000 Acres Already Acquired.

Midway, B. C., April 5th, 1906.—The Kettle Valley Irrigated Fruit Lands Co., Ltd., has been organized at Vancouver for the purpose of irrigating the fruit lands of the Kettle river valley west of this place. The company has a capital of $100,000 and is now preparing to start work. W. R. Pillsworth, C. E., who is one of the provisional directors of the new company and who has been prominently connected with the C. P. R. irrigation undertakings in Alberta, will have charge of the enterprise. The company is acquiring control of some 2000 acres of the finest fruit land in the province stretching west and north from Midway beyond Westbridge. These lands are known to be highly adapted to fruit growing and with the climate all that can be desired, the Kettle valley should soon rival the famous Okanagan.

DIVIDED INTO FARMS

It is the intention of the company to divide the land into farms of various sizes and to dispose of it to local people principally, retaining the water rights and supplying from the Kettle river and Rock creek at nominal rates. Both the proposed extension of the C. P. R. and the Midway and Vernon railway will provide transportatipn facilities and cheapen the cost of fruit in both Midway and Greenwood as well as in all towns in the Boundary.

The provisional directors of the company are Morris Hills, Victoria; W. S. Buttar and W. R. Pilsworth, C. E., Vancouver; Lt. Col. Glossop, Vernon; W. O. Wright, Greenwood; and A. H. Norris, Midway. The head office is located in Vancouver, but the office, where the main business of buying and selling the land will be done, is located in Midway, and the company expects to have irrigation system in good working order for next year's operations. Mr. Norris, who has been appointed secretary of the company, is a prominent fruit grower of this town, having a large farm planted with fruit of all kinds, especially apples. Mr. Norris has irrigated his orchards successfully and a large part of them will bear fruit this year. As a result of his success English capitalists have become interested and he has been largely instrumental in forming the new company.

Rheumatism Makes Life Miserable.

A happy home is the most valuale possession that is within reach of mankind, but you cannot enjoy its comfort if you are suffering from rheumatism. You throw aside business cares when you enter your home and you can be relieved from those rheumatic pains also by Chamberlain's Pain Balm. One application will give you relief and its continued use for a short time will bring about a permanent cure. For sale by sale All Druggists.

FRANKLIN TOWNSITE.

The last number of the B. C. Gazette contains notice of the incorporation of the "Franklin Townsite Company, Limited." The purpose of this company is to buy and sell lands at Franklin city on the North Fork of the Kettle river. This new "city" is near Franklin camp and will be brought into direct communication with the town of Grand Forks by the proposed Kettle River Valley railway, which it is fully expected will be built this summer.

The Kettle Valley Irrigated Fruit Lands Company, limited, has also been incorporated with a capital of one hundred thousand dollars. This company will deal in fruit lands in the Kettle river valley.

FRIDAY APRIL 7, 1906

BANK OF B. N. A.

Mr. Brodie, who presided at the annual meeting of the proprietors of the Bank of British North America, held in London on March 6th, may not be accused of taking too roseate a view of the Canadian situation. He is not alone, however, in recognizing the two great evils attendant upon the inrush of settlers into the Northwest, the increasing number of business failures with heavy liabilities, and the artificial inflation of the value of land due to the operation of speculators. Both of these are usually features accompanying the rapid development of a new country, and the price has usually to be paid in the long run.

The year's record of the bank was evidently considered satisfactory by the proprietors, for they not only voted the usual vote of thanks to Mr. Stikeman and his fellow officers, but failed to accept the invitation of the chairman to ask questions, an invitation usually promptly availed of where all is not considered as satisfactory as it might be. The earnings for the year were almost ten per cent., enabling the payment of the usual six per cent. dividend, the addition to the reserve fund of $97,333, the reduction of the bank premises' account by $48,666, and the usual provision for the officers' funds of the institution. That the bank possesses the confidence of the people of the localities which it serves in a marked degree is indicated by the fact that its principal gain in deposits is, as was in the case last year, in the savings bank branch.

BOUNDARY ORE TONNAGE.

The following table gives the ore shipments of the Boundary mines for 1900, 1901, 1902, 1903, 1904, 1905 and 1906, as reported to the Boundary Creek Times:

VANCOUVER was first called Gastown. Some people think there is lots of gas there yet.

A NEW SUB-STATION

Property Purchased in Anaconda for Greenwood Plant.

The West Kooteney Power and Light Co. have purchased the property of B. C. Smith in Anaconda, and are negotiating for the purchase of more property nearby for the erection of a sub-station for the distribution of power in Greenwood and vicinity. The negotiations were started when Lorne Campbell visited the city a few weeks ago, and the Smith property has just been acquired.

The high tension pole line has been completed to Greenwood, with the exception of across one mineral claim, where some slight difference as to right of way still exists.

It is evident that the West Kootenay company are determined to distribute power to customers in Greenwood and vicinity in spite of their failure to obtain an amendment to their charter. It has always been expected that some arrangement would be arrived at between the rival companies whereby more power would be supplied to the Boundary, and it looks as if some agreement had been reached.

The new sub-station will be 25x56 feet, outside measurement, or exactly the same size as the Phoenix sub-station. It will consist of three wings. The center wing, which is to be 50 feet high, will be used as a transformer room, while the switches and switchboards are to be placed in the side wings. The transformers will step-down the electric current from 60,000 to 22,000 volts. Although the building is to be no larger than the Phoenix sub-station, twice the amount of electric energy will be transmitted to this point. The building will be constructed entirely of brick and concrete, and it will require three or four months to complete it.

A similar station is being erected at Grand Forks under the supervision of J. B. Henderson, who will also superintend the Greenwood plant.

BENEFIT CONCERT.

The Miners' Union have completed the program for the W. A. Nicholson benefit concert to be held Thursday, April 12th, in the Auditorium. Considerable interest is being taken in the affair and a number of prominent local musicians have volunteered to assist. Following is the program:

PART I.

THE MOUNTAINS OF B. C.

Description of the Main Ranges and Highest Peaks.

The formation of a Canadian Alpine club is causing a strong revival of interest in the mountains of Canada, and the following article on the mountains of British Columbia by Rev. Dr Herdman, published in the Winnipeg Free Press, is timely and full of interest, especially as the writer is a pioneer in the province and has travelled widely among the mountains described:

"Ruskin has written that at the age of two his mother placed him on a crag-summit in the north of England. Peering through the roots of a tree, there flashed into his infant eyes the sight of a wide valley with slanting rays of sunlight and the gleam of far-off distances. Then he woke, in that tender age of his, to a sense of the vastness and loveliness of Nature, Born again into the kingdom of beauty he become an artistic soul, Perhaps we older infants may also see sights and get some inspiration—will one only absorb into our hearts the glow and vision of the great mountain scenery of our Dominion.

Bewildering as our mountains are in variety and number, at least one can count upon four main ranges roughly parallel to the Pacific shore line—the Rockies, the Selkirk, the Gold and the Coast range. Sometimes these two latter are thrown together and named the Cascade. Another range is sometimes suggested consisting of submerged mountains, their tops forming the islands and archipelagos off the Pacific shore. The Rockies are the loftiest, running up often 1,000 feet higher than the Selkirks. Upon the Selkirk range however, moisture falls abundantly, which means many glaciers and large snowfields. There are but few lakes in the Selkirks, the valleys being precipitous. The Gold range really includes an indiscriminate number of sub-ranges, fairly well flattened down. Some of the Coast peaks rise up straight from sea-level, and in that way(like Cheam, a noble mountain, 70 miles from the mouth of the Fraser river) really afford a longer climb than from the high peaks of the interior, and present views that alternate between a sea of mountains to the east and a sight of cities along the shore lines of the Pacific. But the difficully near the coast is how to get through the dense dripping vegetation and timber.

What books are there that deal with our mountains? The literature is charming and fascinating. First, Dr. Green's little volume published in 1888 "Among the Selkirk Glaciers." Mount Bonney was his greatest conquest. Macdonald and Sir Donald were his defeats. But he was one of the pioneer climbers of our mountains, and the mapping of routes, and the studies of rocks and of the glaciers, make the books instructive to this day. Then came in 1894, Walter D. Wilcox's "Camping in the Canadian Rockies," followed by a later edition named "The Rockies of Canada." Very fine are the photographs given in these books and the author is a man in love with nature and with the climbing of high peaks as well as studing in details of peaceful valleys. In 1904 came out a book of constant climbs and frequent conquests, along with a good deal of the history of the first transcontinental explorers—the authers being H. E. M. Stutfield and Prof. Collie, and the name of the book being "Climbs and Explorations in the Rockies." Another book of perhaps even more added interest, full of poetry and spritual thought and of long lists of "first ascents," named "In the Heart of the Rockies," was pulished last year by an intrepid mountaineer, Rev. James Outram. Then at the end of the year came the magnificent work of our leading Canadian climber and surveyor, "The Selkirk Range," by A. O. Wheeler, of Calgary, the book being published by the department of the interior. His work presents splendid photographs and describes systematically the early explorations and the present survey system and climbing by different parties of a large array of peaks, and is to be followed by maps and charts. One should refer also to a coming book by Mrs. Henshaw, of Vancouver, on the flora of the mountains, and to the photograghs of flowers taken by Mrs. Schaffer. Besides there have been many articles concerning our Canadian mountains published in magazines in the States, especially in the Appalachian Journal, of Cambridge, Mass.

To get a proper understanding of the heights and sizes of the mountains, one must remember that the laws of perspective apply here as elsewhere. A small hill will sometimes hide a large mountain. When you look at the glacier on Mt. Temple, because it is seven miles from the railway, many travellers think it is only a few feet in thickness, it must be at least 200 feet, On the other hand, it is possible that in the early guide books of the C. P. R. the Green Glacier on the east side of Mt, Stephen was rated as entirely too thick, said to be in the early folders 500 feet, which may be an exaggeration, and there were some descriptions that impiled that our Canidian peaks were higher than the Alps! Here is one way of ascertaining the standard that should be applied the mountains: Get first the idea of "tree line," then of the limit of vegetation, then of the slopes of bare rock, then of the glaciers and snow fields, and the cornices that cling to the crest. Trees run up the sides of the mountains to about 7,000 feet in the Rockies and about a thousand feet lower in the Selkirks. Vegetation, in the shape of shrubs, flowers, moss and heath, proceeds from a thousand to two thousand feet higher, when the slopes are not too steep or covered with rocks. The glaciers in the Selkirks come down sometimes as low as 5,000 feet above sea level. While from the peak of a mountain you get a great panoramic view, yet sometime from a height of about seven or eight thousand feet you can see more detail in the way of lakes ravines, valleys, couloirs—and pick up some good imitations of Sotch heather and capture some gally colored butterfies.

Some mountains have different shapes in the same ranges, many of them rising up in an individualistic way; in other ranges they seem to copy the conformation one from another. Fantastic sometimes are the peaked summits, and if a mountain looks monotonous it is because you are not studying carefully the slopes and the curvature of the sides and the whole configuration. The views are finest perhaps, when a great mass rises up steadily and in isolation—like Mts Cascade, Castle, Temple, Tupper, Big Chief, or the Three Sisters. Many

REPORT OF THE DIRECTORS OF THE Bank of British North America

Presented to the Proprietors at their Seventieth Yearly General Meeting.

The yearly general meeting of the proprietors of the Bank of British North America was held at the offices of the company, 5, Gracechurch Street, London, on Tuesday, 6th March, Mr. J. H. Brodie presiding.

The Secretary (Mr. A. G. Wallis) read the notice convening the meeting.

The Chairman said: Before commencing my remarks I should like to express my regrets at the absence today of one of the directors—Mr. E. A. Hoare—who is too unwell to be present. Mr. Hoare takes a great interest in the bank, and I believe has never before missed attending these general meetings during the last twenty-six years. In the first place you will wish me to make some remarks on the balance-sheet to the end of last year. Taking firstly the item of deposits, there is again an increase in the deposits and current accounts of £490,000 sterling ($2,384,666), which is mostly in the savings banks deposits, and, as you will recollect, it was in these deposits that the growth was shown for 1904. The actual increase in our savings bank deposits is about £390,000 ($1,898,000). Bills payable are a good deal higher than last year, showing as they do an increase of over £1,000,000 ($4,866,666). Notes in circulation have increased £70,000 ($340,666), and at times during the year have considerably exceeded this amount. We are pleased to be able to put a further £20,000 ($97,333) to our reserve fund, thereby bringing it up to £440,000 ($2,141,333). It is getting on towards the half-million—a figure which we shall all, I am sure, be delighted to reach—and all saved out of profits, and none of it by the issue of new capital. If you now turn to the credit side, cash in specie and cash at call and short notice are more than £600,000 ($2,920,000) above those of last year, and show an excellent percentage on our responsibilities on the debit side, these two together being close upon 40 per cent. of our total liabilities to the public. Investments are slightly altered. We sold our £25,000 ($121,666) of Exchequer bonds, and increased our Consols to an equal amount. Bills receivable, loans on security and other accounts are higher by one million sterling. The premises account, after transferring the sum of £10,000 ($48,666) from the profits of the half-year, stands at £173,000 ($841,933), which is £7,000 ($34,066) less than at the corresponding date of 1904. At our last annual meeting the chairman gave you very full information respecting the various branches at which expenditure had principally been incurred, so that I need not go over that ground again; but I may remind you that he made it very clear that further transfers will have to be made in the future, when he said, "not because there is not ample value and more than ample value in property, but because we do not wish to see this account remaining at so high a point." In the opinion of the Court it is most important that we should keep our premises thoroughly up-to-date, and with this object in view there is work still to be done, and, therefore, you must not be surprised when we feel it necessary to make further transfers from profits in order to keep this account down. Our profits for the year, after making ample provision for all doubtful accounts, amount to £93,000 ($452,600), and these figures compare with £96,000 ($467,200) in 1904. The small difference is more than accounted for by the disappearance of one or two large accounts which had previously been borrowers. At our last meeting the chairman referred to the inactivity which prevailed during 1904 in New York, at the same time remarking: "That these conditions will not be permanent, and a return to greater activity will certainly be seen, although I am not going to venture to predict the date." As it turned out, low rates for money continued until September, when a better demand sprang up which later on was followed by some weeks of unusual activity and exceedingly profitable rates, in which our agency fully participated. Generally speaking, business in Canada during 1905 was prosperous, all the great industries showing good results, and trade has been generally active throughout the year. Deposits in chartered banks increased over fifty million dollars. I cannot give you the total deposits for 1905, but the amount with all the banks, including the Dominion Government Savings Bank, was some 107 million pounds sterling for 1904, whilst in 1880—some 25 years before—these were only about seventeen million pounds sterling. The bank clearings of Canadian cities have increased 22 per cent. The lumber trade has shown a general improvement, the English market partially recovered from the depressed condition which was the characteristic of 1904; but it was the improvement in prices in the American market that contributed most to the prosperity of this industry; and prices still continue to advance. The salmon industry of British Columbia for 1905 has shown very good results. The catch was a record one, and the prices realized very good, and the market continues strong. Many of the canning companies must have done very well in 1905, improving their financial positions to such an extent as to put them on a very sound basis. Dairying continues to show excellent results, and the total value of exports under this heading for the year ended October 31st, 1905, reached the very large total of 42 million dollars. In mining in British Columbia the approximate estimate of the mineral production in 1905, sent over in anticipation of the full returns; gives a total of $21,403,000; these figures show an increase of more than 2 million dollars over the value of the output for 1904—a difference which is largely accounted for by the high price of copper compared with the price ruling in 1904, which has stimulated production of the great copper mines of the Boundary district. In the Yukon a further decline in the output of gold has to be noticed. The Government figures, calculating gold at $15 per ounce, show a total export of $7,110,000, which is more than 2 millions less than the output of 1904. This is partly accounted for by the fact that the summer season was extremely dry and good labor none too plentiful. The future of the camp, as the chairman told you last year, appears to depend chiefly upon an adequate water supply, and we understand that surveys have now been made by engineers of high reputation, who are of opinion that there are no difficulties which cannot be overcome in bringing a sufficient supply of water to the camp. Should this prove correct the life of the Yukon may be prolonged. It is pleasing to see the climate of British Columbia being appreciated by the better class of settlers in this country, and in many parts, especially in the Island of Vancouver, families are continuously arriving, who, having small independent means, take up farms, and seem greatly to enjoy life. In Manitoba and the North-West the harvest constituted a record, the production of wheat in 1905 amounting to 86 million bushels, and the quality was excellent, and fetched good prices. The exports of cattle were 59,000 head, 22,000 head more than in 1904, and 38,000 more than in 1903. The immigration to the provinces of Manitoba, Saskatchewan and Alberta is stated to have been 120,000 persons. A year ago your attention was drawn by the chairman to the fact that the number of commercial failures in Manitoba and the North-West Territories had increased, adding that the total of such liabilities had not increased in like proportion, and he gave a word of warning against too great freedom in granting credit. It is, therefore, with great regret that I have to point out that, whereas in 1904 the failures in these 3 provinces were 52 in number, with liabilities amounting to $370,000, in 1905 they were 155 in number, with liabilities amounting to $1,324,000. Our Winnipeg manager, who writes with a large experience of local conditions, is of opinion that while established houses have added to their means and strengthened their position, many have gone into business of late years lacking capital or experience, or some other essential, with the inevitable result. The settlement of these three provinces is proceeding rapidly, as the immigration returns clearly indicate, and the value of important farms has considerably increased, and in the most favored localities has now reached a point where the value compares not unfavorably with the price of freehold farms in certain counties of England. The value of good land has also advanced considerably, chiefly under the influence of purchases for actual settlement, but also I regret to say from the purchases of speculators, which have been on a considerable scale, and will certainly not have a beneficial influence upon the agricultural industry. This concludes the general remarks I have to make to you, but before sitting down, I will ask you to appreciate that the results of the year's working has not been brought about without hard work by our general manager, Mr. Stikeman, and his staff, and I am sure you will allow us to convey to those in Canada and to our London office your hearty thanks for their continued good services in the interests of the bank. I beg to move that the report and accounts be adopted, and if any proprietor wishes to ask any questions I will be pleased to reply to him to the best of my ability.

Mr. Henry R. Farrer, seconded the resolution.

No questions being asked, the resolution was put to the meeting and was carried unanimously.

Messrs. G. D. Whatman, J. J. Cater, and H. J. B. Kendall, the retiring Directors, were re-elected, and Mr. C. W. Tomkinson was elected to fill the vacancy caused by the resignation of Mr. Maurice G. C. Glyn, who found it impossible for him to devote sufficient time for the conscientious discharge of his duties on the Board.

THE BANK OF BRITISH NORTH AMERICA.

BALANCE SHEET, 30th DECEMBER, 1905.

Dr.			Cr.		
To Capital		$4,866,666.66	By Cash and Specie at Bankers and in Hand	$ 3,782,453.58	
20,600 Shares of £50 each fully paid:			By Cash at Call and Short Notice .	10,905,581.58	
To Reserve Fund		2,141,333.33			$14,688,035.16
To Deposits and Current Accounts		20,223,651.00	By Investments—		
To Notes in Circulation		3,368,577.89	Consols, £253,000 at 86	$1,058,889.33	
To Bills payable and other Liabilities, including provision for contingencies		16,138,708.98	National War Loan, £50,000 at 90	219,000.00	
To Rebate Account.....		$1,229.90		$ 1,277,889.33	
To Liabilities on Endorsements	$1,639,405.92		Dominion of Canada Bonds, £140,000 at 97	660,893.33	
To Profit and Loss Account:			Other Securities	663,706.90	
Balance brought forward from 30th June, 1905.....	$192,257.76				2,602,489.56
Dividend paid October, 1905.....	146,000.00		By Bills Receivable, Loans on Security, and other Accounts		28,714,071.41
	$46,257.76		By Bank Premises, etc., in London, and at the Branches		841,691.32
Net Profit for the half year ending this date, after deducting all current charges, and providing for bad and doubtful debts	287,462.41		By Deposit with Dominion Government required by Act of Parliament for Security of General Bank Note Circulation		155,175.42
	$333,720.17				
Deduct:					
Transferred to Bank Premises Account	$48,666.66				
Transferred to Reserve Fund	97,333.33				
Transferred to Officers' Widows' and Orphans' Fund.	2,500.00				
Transferred to Officers' Pension Fund	2,951.65				
Transferred to Officers' Life Insurance Fund.....	973.33				
		152,424.97			
Balance available for April Dividend.....		181,295.20			
		$47,001,462.87			$47,001,462.87

Note.—The latest monthly Return received from Dawson is that of the 30th November, 1905, and the figures of that Return are introduced into this Account. The balance of the transactions for December with that Branch has been carried to Suspense Account, pending the receipt of the December accounts.

We have examined the above Balance Sheet with the Books in London, and the Certified Returns from the Branches, and find it to present a true statement of the Bank's affairs

eyes seem incapable of discerning the shapings and chisellings of nature's sculpture-work—on the line of railway are hoodoos, spires, a horse and rider, a funeral pyre, a hermit and dog, "camels from Egypt," the pyramid of Cheops, castellated turrets and drawbridges, etc. Many have looked upon the photograph of "The Mountain of the Holy Cross" near Denver, Colorado. This is formed by two deep cracks packed in with snow and ice, with a background of black rocks behind, (but one side of this mountain has now fallen, taking with it one arm of the cross). Southwest from Calgary a different and equally noble cross looms up to discerning eyes; it is on the Banded mountain, and consists of two uplifted ridges of rock intersecting one another, while behind, from the upper part of the cross up to the pyramid peak of the summit, is spread out, throughout almost all months of the year, a background of pure snow.

The steeper a mountain is on one side, the more accessible it usually is from some other side. Mountains have all they can do to maintain their equilibrium and preserve their own peaks! And where a castellated tower or crest rises up, as on the Crow's Nest mountain, and the highest wall of Stephen and the top of Cathedral and other summits—Nature has thoughtfully, in most cases, thrown a ledge around a precipice, and opened up a chimney-crack just at the perilous places. Many of the mountains have sent down small or large rock slides. A curved peak near Arrowhead threw a mass of debris into the Arrow lake three years years ago, which raised a tidal wave that broke the C. P. R. steamer from her moorings at the wharf, and only for the cool headedness and good seamanship of her captain she would have been dashed to pieces or sunk. Near Field, from the slopes of Cathedral mountain, there are visible evidences of a great slide, perhaps second only to the Frank slide. As for this last one, I think Turtle mountain was largely composed of gravel on the side from which the rocks fell, and some other mountains in that neighborhood present the same appearance, the heavy rocks on the surface being apparently a sort of veneering. There are evidences of slides also in the "ice-gorge" on Mt. Stephen and in a valley between Peaks Stutfield and Wooley. A little slope of earth slid right away some years ago at Maple Ridge near Westminster Junction, and last year a small hill moved away at Spence's bridge and buried a settlement of Indians.

What is the height of our loftiest mountains? The highest so far known is Mount Robson, 13,500 feet, west of the Yellowhead Pass. Next to it are Mounts Columbia (12,000), Forbes (12,100), Alberta (12,000). These last named mountains are 50 to 90 miles north of Laggan. Then come Lyell, Athabasca and Assiniboine. The highest mountains visible easily from the railway are Temple (11,637), Stephen (10,523), Vaux (10,741), Sir Donald (10,806), and Bonney (10,700).

Avalanches fall from the cornices and the overhanging glaciers on the mountain crests. In Abbot's pass, between the steep sides of Lefroy and Victoria, great masses are often to be seen, launched out suddenly into space. Then there is a noise like the roar of Niagara, and behind the avalanche streams of snow-dust trail down like cascades. Climbing up the deep side of a high crest you often find a shelf of snow and ice extending over your head for 20 feet or more into space. This needs caution and more caution perhaps, when you are rounding peaks or corners where the snowslope seems firm but has nothing but air beneath it. As for the glaciers, they move an inch or two on an average each day. Some are steep, others—like the Victoria glacier, near Lake Louise—almost level. The ice is vicious and the snout of the glaciers is usually the most slippery and dangerous part. The reason of this is because the warm air of the valley has effect upon the ice, and the glacier itself is fed usually from a snow field (reve) covering a large area. The reve on the slopes of Mount Columbia is said to include 200 square miles, and in many places, as near Glacier House, the snow fields often connect and combine. In climbing to the great ice-field of Mount Hector, you mount up to a height of perhaps 9,000 feet and reach a high escarpment the climate seems tropical all the way if the sun is shining, but when you come to the gap which forwards you towards the lion-like peak, you plunge in five minutes' time into Arctic conditions—snow, cold air, frigidity. Nature abounds in moments and varieties.

Glaciers, of course, throw themselves into all kinds of shapes. A cliff will sometimes cause the icebed to divide itself, but the two sides have passed the obstruction and come together again, curving right round the lower rocks. On the south side of the Upper Bow lake there is a three-pronged glacier on view, most interesting and weird. There is another fairly similar one in the Yoho valley. Some glaciers receive many avalanches of stones from the mountain sides which hem them in On a level glacier you will find flat rocks many feet up in the air, supported by an attenuated pillar of ice. This position is due to their shielding off the rays of the sun. Streams course their way over and through the ice-fields, running into crevases and moulins, and finally emerging from the foot of the glacier, milky in color. This color is due to the steady movement of the glacier pounding down the rocks it carries and grinding them on the rockbed beneath, and sometimes the ice in its slow and earlier journeys has evidently cut away cliffs and undermined ledges and made formidable erosions and gorges. The stones taken down by the glaciers are thrown together into large deposits at the base, called terminal moraines, and on their flanks are piled up lateral moraines. These are worth studying often as to their relative position and size, giving much light as to the receding and melting down of the glaciers. At the foot of the great Illecillewaet glacier, Dr. Green and Mr. Vaux have put bands of paint upon terminal rocks with dates showing plainly how this ice field is shrinking. But some glaciers, instead of receding, are pushing out into the timber growth and pushing it down. This holds good of a glacier near Moraine lake, and of another in a valley between Stutfield and Wooley Peaks, where the ice is sheltered from the sun by a heavy rockslide. As you climb up the Beaver valley on the C. P. R., looking out across, you see a large range of hills called the Prairie hills. These are probably moraines, formed by a glacier that at one time filled up the valley, and we may conclude that the glaciers which remain are remnants and relics of the Great Ice Age. The passes are also interesting to traverse. Above the Upper Bow Lake you come to a shoulder whence a striking panorama discloses itself. On one side is is the source of the Bow river running past Calgary, on the other side, out of a cavern at the foot of a glacier, runs a swift stream which is the main source of the North Saskatchewan, passing Edmonton, and even on the pass itself, which is a sort of meadow, a little morass covers the summit in wet weather, out of which small streams trickle, one to the Bow, the other to the other river And away farther north, near Columbia mountain, on the sides of the Dome, 11,650 feet high, the snow melts at the foot of the glaciers and runs into three different rivers—the Athabasca, emptying finally into the Arctic sea; the Columbia, emptying into the Pacific; a branch of the Saskatchewan, emptying at last into the Atlantic via Hudson's Bay. There is another pass that should be referred to. David Douglas, the botanist, stood in a valley between two mountains, after coming west through the Yellowhead pass, and these mountains he named Brown and Hooker, and estimated them as 16,000 to 17,000 feet high. And geographers have ever since set down these names and credited them with these altitudes. The pass has certainly been definitely located by virtue of a little circular pool named "The Committee's Punch Bowl," but within the last few years Wilcox, Coleman, Collie and others have visited this spot, and have surveyed the mountains and have found them to be only 9,000 to 10,000 feet in height."

TAKE NOTICE that I, Forbes M. Kerby, Free Miner's Certificate No. B74615, intend, sixty days from the date hereof, to apply to the Mining Recorder for a Certificate of Improvements, for the purpose of obtaining a Crown Grant of the above claim.

And further take notice that action, under section 37, must be commenced before the issuance of such Certificate of Improvements.

Dated this 31st day of March, A. D. 1906.

30-39 FORBES. M. KERBY.

Progress and Development

Progress and development are terms closely identified with life in the West. In a new country people are working daily for the upbuilding of town, city and district, and for the improvementof the conditions under which men and women are called upon to live. Every act of daily life that tends to bettering one's surroundings makes directly or indirectly for the improvement of society generally. In all this the local newspaper plays an important part. Among its local readers it stimulates an increasing interest in their home city, keeping them posted on all local happenings, and becomes a welcome weekly messenger, bearing bright and welcome tidings. Among its outside readers it forms a valuable advertising medium making known the merits, advantages and prospects of the city and attracting thither citizens who want employment, business firms looking for locations, and capitalists seeking investments. In the upbuilding of a town, city or district the local paper is an important factor.

BOUNDARY CREEK TIMES

The Boundary Creek Times aims to do its full and complete share in the upbuilding and improvement of Greenwood and the Boundary district. It is not handicapped in its work by any restraining obligations to any party, clique or corporation, but it is free at all times to rise up and promote the best interests of the City of Greenwood and its people. To do this most thoroughly and satisfactorily the Times must have the support and cooperation of the citizens of Greenwood.

Every effort is being put forth to make the Times the class of newspaper the people want. Increasing attention is being continually paid to mining news, especially of that nature that will interest those employed in the work as well as those whose capital is invested in the properties. With this end in view we aim to have

A Subscriber in Every Home

As a result of the efforts that have already been put forth, we believe that an increas- interest is already being taken in its news columns, We have evidences of this from the fact that the subscripiion list is already growing; the street sales are increasing weekly and the news dealers find more demand for each succeeding issue. This is a satisfactory condition of affairs that acts in two ways. It increases the revenue of the circulation department and it makes the paper a first-class advertising medium for local business men.

In handling local advertising every effort if put forth to protect the Greenwood merchant. The local page is reserved for them and foreign advertising has been repeatedly refused because the advertising manager refused to disturb the positions held by local advertisers.

Business men of Greenwood, we are here to protect and advertise you. We are protecting you! Do you advertise? Read The Times, subscription $2.00 per year.

Dr. Mathison, Dentist.

Flowers at Mrs. Bernard's, phone A31

H. Wright of Nelson, visited Greenwood Tuesday.

Ralph Smailes is expected home from the Coast today.

Mrs. W. McBride returned Monday from a tour through Alberta.

Bruce Craddock left Thursday for Bulkey valley via Vancouver.

J. L. White of Victoria, is visiting with his brother, R. C. G. White.

FOR SALE—One No. 9, Cook Stove, 6 l'ds, in good conditiou. Apply at this office. 31

C. E. Miller, Gordon Wadsworth and W. P. Tierney of Nelson were visitors in the city this week.

Mrs. L. Pordman returned Tuesday from the Green River Hot springs, Washington, much improved in health.

Don't wait until you are out of a supply of billheads, letterheads and envelopes before you order a new stock.

Clement Vasher, Beaverdell superintendent of the Sally mine, is in the city this week on business connected with the property.

Trueman, photographer, of Vancouver, will visit Greehwood Saturday, April 7th, for a short time. This is your chance to secure the best in photos. 31

Sidney Webb, of Midway, who among others is interested in the irrigated fruit lands project of the Kettle valley was in town on business Wednesday.

Messrs. P. T. and Donald McCallum of Grand Forks spent a few days in Greenwood this week, The latter is business manager for the Grand Forks Gazette.

The Times is in receipt of a most handsome hanger sent ont by the Tourist Association of Victoria, which gives splendid lithographed views of Victoria and vicinity. The work was executed by the B. C. Engraving Co., of Victoria.

Upon inquiry at the C. P. R. depot it was learned that no information had been received there regarding the reported change in the time for the arrival and departure of trains and that the present service would continue for some time at least.

Word has been received from Duncan Ross, M. P., to the effect that he and his daughter Christine, have both recovered from their recent attack of diptheria. Mr. Ross is back in the house and hard at work for his constituents.

The buildings occupied by T. M. Gulley & Co., the Canadian Bank of Commerce and the Mellor block have been greatly improved by liberal coats of paint. Other Copper street business houses might well follow this good example including the postoffice.

Next Wednesday night a meeting will be held in G. R. Naden's office for the purpose of forming a Boundary Baseball League and to arrange a schedule for the season. Invitations have been extended to the presidents of the Grand Forks, Phoenix, Boundary falls and Midway clubs.

A large number of the young people of the Methodist church spent a pleasant time at the home of Rev. and Mrs. Hastings Wednesday evening. A variety of games were enjoyed and a pleasing musical program was rendered Refreshments were served and a most enjoyable evening brought to a close by singing "Auld Lang Syne."

"Some weeks ago during the severe winter weather both my wife and my self contracted severe colds which speedily developed into the worst kind of la grippe with all its miserable symptions," says Mr. J. S. Egleston of Maple Landing, Iowa. "Knees and joints iching, muscles sore, head stoped up, eyes and nose running, with alternate spells of chills and fever. We began using Chamberlain's Cough Remedy, aiding the same with a double dose of Camberlain's Stomach and Liver Tablets, and by its liberal use soon completely knocked out the grip." Sold by All Druggists.

There was a temporary improvement in the mail service to Greenwood for two days this week, which was much appreciated by the public, but it did not last. On April 1st the Great Northern began carrying the Greenwood mail through to Midway and for two evenings the Macdonald stage line brought it to the postoffice here. The stage line, however, discontinued this as they had no contract for the work, and now the mail arriving at Midway at night by the Great Northern is brought to Greenwood on the 2:30 train next day. This is a slight improvement, as Eastern Canada and American mail now reaches here an hour earlier than heretofore.

Dr. Simmons, Dentist; Open evenings.

Sick headache result from a derangement of the stomach and is cured by Chamberlain's Stomach and Liver Tablets. Sold by All Druggists.

Rev. J. Leech-Porter, rector of St. Jude's church will deliver a lecture on "The Seven Sayings of Christ" on Good Friday, April 13th, from 12 to 3 p. m. All are cordially invited to attend.

The new collars and extension hames for the fire team have arrived but as there is no harnessmaker located in Greenwood they had to send to Midway to have the necessary changes made in the harness before they can be used.

The Boundary Falls boys are forming a baseball club. They are confident that after a few practices they will be able to beat any team in the Boundary. They have already laid plans to meet the winners in the proposed Boundary league at the very first opportunity.

PROGRESS AT SMELTER.

The first shipment of machinery for the new machine shop at the B. C. smelter is expected in two weeks. It is being supplied from the Canadian Fairbanks Co. The heavy tools are being supplied by the John Bertram Co., of Dundas, Ont. The structural steel is expected to arrive soon after the machinery,

The excavations for the new additions have been completed and work has started on the flue extensions. The masonary work on the foundations has also been started and the front bank of ore bins have been dismantled and new timbers are being framed.

At the Mother Lode mine drifting at the 300 foot level is in progress and diamond drill prospecting is proceeding.

Diamond drilling is now in progress at the Oro Denora, which has recently come under the control of the B. C. Copper Co.

GOING TO BULKLEY.

Considerable interest is now being taken in Bulkley valley in northern British Columbia. This district is rich in minerals and the valley is suitable for farming. Several Greenwood people, including George Finley, formerly superintendent of the water works, James Johnson, William Hanna and James Ryan expect to leave in a few days for Vancouver, where they will lay in a stock of supplies and proceed about April 15th by boat to Essington, where they will catch a river steamer and continue their journey to Hazelton. The remainder of the distance to the valley will be made by pack train.

GRANBY DIVIDEND.

The Granby Co. have just declared a dividend for $405,000 payable May 12th. This was announced at their meeting held Tuesday in New York city. This means a tremendous lot to the Boundary, as it goes far to stimulate interest in mining here and to strengthen confidence in the country.

MORE WATER NEEDED

A Reservoir on Providence Creek Proposed

NEW FIRE ALARM SYSTEM

Council Passes Motion to Install Six Street Boxes—New Power Plant Is Favored.

The most important council meeting so far this year was the one held last Monday night and it was one at which the attendance of Aldermen was smaller than usual. Those present were, Mayor Naden, Aldermen McRae, Bunting, Wood and Mathison. Three very important questions came up for discussion and after thorough consideration definite action was taken on them all. The weighty questions which the city fathers were called upon to consider were. the installation of a fire alarm system, the extension of the water works system, to include a new reservoir on Providence creek, and the granting of a twenty year franchise to the Greenwood Electric company for the use of the streets. More extended notice of the latter is made in another column.

NEW FIRE ALARMS.

In dealing with the fire alarm system Alderman McRae stated that he had investigated the proposed electric street box system, as used in the large cities, and also the telephone system, as used in Phoenix, and he had become convinced that the former was the most practical, serviceable, and in the end, the cheapest. The system is known as the Gamwell, and as outlined by E. G. Warren of the Greenwood Electric company, provision was made for nine street boxes, three on Copper street, one of those at the Imperial hotel corner, one at the Bank of Montreal corner and one near McCreath's liquor store. The others would be located as follows: Two on Gold street, two on Kimberly avenue, one near the Presbyterian church and one at the fire hall, for a general alarm. The total cost for such a system would be about $1,000, exclusive of labor, which Mr. Warren offered to donate to the city. After some discussion it was decided to use fewer boxes and thus lessen the expense.

On motion of Aldermen McRae and Bunting it was decided to install a six box system at an approximate cost of about $700. A by-law to this effect will be prepared and submitted to the people for their endorsement.

MORE WATER NEEDED

The discussion on the extension of the water works system was led by His Worship, the Mayor, and it was generally admitted by the members of the the council that the question of securing a larger supply of water was an urgent one. His Worship pointed out that while the present supply was quite sufficient to meet the present needs, there was not sufficient reserve to meet an extraordinary emergency, such as a big fire; that with insufficient water an up-to-date alarm system and fire brigade were of little practical value. He was more anxious that an extension be made to the water system than that an alarm system be installed or even street improvements be proceeded with.

A NEW RESERVOIR.

The proposition under consideration was the building of a reservoir on Providence creek and the extension of the present mains north to connect with it. This would provide a supply from both ends of the town and would insure an ample quantity. It was pointed out that such a system would be an ideal one and would be of greatest service and of least inconvenience to the public in case of accidents. If a break occurred in any part of the city only the houses in the immediate vicinity would be cut off, and the remainder of the city would not be affected. The proposed reservoir would add some fifty or sixty thousand gallons to the available supply and the city engineer reported that the total cost would be approximately $6,500, of which $1,500 would be for the reservoir constructed of concrete masonry.

After some discussion a motion was put through by Aldermen Bunting and McRae, stating that in the opinion of the council it was advisable to secure an additional supply of water from Providence creek. This will also be submitted to the people for decision.

CHICKENS ABROAD.

Some amusement was caused by reference to the chicken nuisance. The Mayor remarked that several people had complained that their efforts to grow flowers and vegetables were useless on account of their neighbors' poultry. He desired Alderman McRae, who is a well known chicken fancier, to introduce a by law to compel people to keep their hens at home and feed them there. Alderman McRae did not feel inclined, so the Mayor gave notice that he would introduce such a by-law.

NEW POWER PLANT.

A letter from E G. Warren outlining the proposed construction of a new power plant at Boundary Falls was read and Mr. Warren was summoned to the council chamber to discuss the matter. He explained that the twenty year franchise asked for, as an encouragement to build a plant, was not an exclusive one. and pointed out that at the end of five years the city would have the privilege of purchasing the plant at its actual value, and that at any time they might erect a municipal lighting plant. The council went carefully into the matter and favorably considered the project, instructing Mr. Warren to have his proposition submitted in the form of a by-law, which would be considered article by article at the next meeting. In the matter of rates Mr. Warren expressed a willingness to agree to a maximum charge for street, business and residence light.

The Mayor gave notice that a special constable had been sworn in to enforce the health by-law and to collect dog taxes. The liquor license by-law was laid over to the next meeting to be held April 9th. The council then adjourned.

VANCOUVER'S BIRTHDAY

The Big City Is Twenty Years Old and Increasing Rapidly.

The Times editor received the following invitation from the Vancouver "100,000 Club," to attend the celebration now in progress in honor of the city's twentieth birthday.

"The 100,000 Club of Vancouver request the honor of your presence at Vancouver's Birthday Celebration to be held in this city, Friday, April 6th, 1996." DR. A. R. BAKER, Pres. NORMAN NORCROSS, Sec.

What is now the City of Vancouver was first occupied by fishermen and lumbermen living in a few wooden buildings making a small village known as Gastown. After a time it assumed more importance and was called Granville. When it was settled that the Canadian Pacific railway would make the town its western terminus, the hitherto unimportant village at once sprang into prominence and was incorporated under the name of Tancouver on April 6, 1886. The population was then about 600. The name was chosen in honor of Captain Geo. Vancouver, R. N, who, one hundred years ago, explored and named Burrard Inlet, where the city of today is built.

The present population is about 55,000, but the "100,000 Club" is working hard to double that in the next few years.

SUNDAY SERVICES.

Caught Cold While Hunting a Burglar.

Mr. Wm. Thos. Lanorgan, provincial Constable at Chapleau, Ontario, says: "I caught a severe cold while hunting a burglar in the forest swamp last fall. Hearing of Chamberlain's Cough Remedy, I tried it, and after using two small bottles, I was completing cured." This remedy is intended especially for coughs and colds. It will loosen and relieve a severe cold in less time than by any other treatment and is a favorite wherever its superior excellence has become known. For sale by All druggists.

Corporation of the City of Greenwood.
