Horsepower Going to Waste that Might Be Harnessed

A representative meeting of delegates from all parts of the Okanagan, Salmon Arm and Kamloops, was held in the Agricultural Hall, of the Court House, Vernon, last Thursday afternoon. Delegates numbering 45 were enrolled.

Dr. K. C. MacDonald, M.P.P., was in the chair. H. M. Walker was elected convention secretary.

Mayor Clingan of Salmon Arm, read a paper on the advantages that would come to the Okanagan if hydro-electric power could be generated within easy access of the centres of the Valley.

Mayor Clingan went closely into the matter of costs in connection with the operation of the electric lighting plants at Salmon Arm, Vernon and Armstrong, with the oil-burning engine, and showed that, inspite of the high rate charged in these cities, the plants were being operated at an annual loss.

He urged the combined effort of the district to bring into operation the hydro-electric system, which would mean a lower rate, better service, and increased development of the district.

Mr. F. J. Fulton, of Kamloops hydro service, explained the magnitude of the water powers available in the Province, and particularly that on Adams river and on Shuswap river, near Mabel Lake, 20 miles from Enderby. From correspondence he had already had with the Department at Ottawa, he felt confident that the Dominion Government was prepared to assist in any hydro-electric development that would lend to the prosperity and advancement of the district. He strongly favored government operation of these natural resources instead of turning them over to private enterprise. He promised to aid in every way he could in bringing to the attention of the heads of his department the economic feasibility of the projects under consideration.

Mr. Anderson, M.P.P., of Kamloops, explained that the Dominion Government had already carried out a very complete survey of the water power in question. The question now is to develop this power which is known to exist. In order to encourage this development we must discover the possibility of building up a steady load. He thought it was up to the Government to make an investigation in order to gain the information required.

Mr. Kline, of the Dominion Hydro Survey, believed that the development of the power resources should be by the co-operation of both the Provincial and Dominion Governments. He was familiar with the possibilities of hydro-electric power development at the Skookum Chuck, on Shuswap river, near Mabel Lake, where, with 40-foot head and abundant reserve it would be possible to develop as high as 10,000 horsepower, 24-hour service for 12 month in the year. On Adams river his investigations convinced him that there was flow and head enough for 15,000 horse-power continuous service.

Mr. Young, former controller of the Water Branch, Victoria, for a number of years, and familiar with the conditions of the McKenzie-Mann Coutau Power franchise, urged the convention, or its committe on investigation to go carefully into the conditions involved.

Mr. C. R. Yuill, electrical engineer, of Vancouver, called attention to the fact that in 1910 he made an investigation of the Enderby-Mabel Lake power site and at that time he reported a power plant could be put in most economically.

Messrs. Twigg, of Grindrod, Cossitt and Shatford, of Vernon, and Copeland of Lumby, spoke in connection with the proposal before the convention.

The conclusions of the convention are summed up in the following resolutions drawn up by a resolutions committee consisting of Mayor Carment, Kamloops; Mayor Barnes, Enderby; Mayor Clingan, Salmon Arm; Mr. Hassen, Armstrong; Mr. Copeland, Lumby; Mr. Cossitt, Vernon; and Mayor Sutherland, Kelowna, and passed by the convention:

To the Hon. the Premier of Canada, and the Hon. the Premier of B.C.

Be it resolved, that this meeting of representatives of the Municipalities and Farmers organizations and Boards of Trade of Shuswap and Okanagan Valleys, assembled in convention at Vernon, on 17th July, respectfully call upon the Dominion and Provincial Governments to immediately cause a survey to be made of the power available on the Shuswap and Adams rivers with a view at once of developing such power for the use of the inhabitants of the said valleys, and the desirability of electrifying the Okanagan branch of the Canadian National Railway.

A standing committee consisting of the mayors and reeves of all municipalities, and presidents of the United Farmers and other agricultural organizations within the district, was named to take in hand the carrying to a successful issue the objects proposed.

The Standing Committee was empowered to appoint a secretary, and to pay for secretarial work done for the committee, and to apply to the various municipalities to cover the expense of such secretarial work.

REMARKABLE SUCCESS

Mr. Robt. Watson, accountant at the Hudson's Bay, Vernon, is to be congratulated on the remarkable success that has attended his efforts as a novelist. "My Brave and Gallant Gentleman," a romance of British Columbia, was his first published work. It made its initial appearance serially in the Farmers Magazine in the early part of last year. It was published in Canada and the United States in book form in the Fall, and ran rapidly into three editions. The fourth edition, a reprint of some 30,000 copies, is being brought out this fall by Messrs. Grosset & Dunlap, of New York, and only this week the second serial rights have been sold to the Syndicated Newspapers of Canada, for reproduction serially in the various newspapers throughout the Dominion.

Mr. Watson's new novel, "The Girl of O. K. Valley", a romance of the Okanagan, was accepted for publication two weeks after its completion, and it will appear in Canada and the United States early this fall.

H. S. Timberlake has taken over the optical parlor above the Vernon Drug Co., formerly occupied by S. O. Muir & Co. Mr. Timberlake is adding some of the most up-to-date instruments, so will have, without exception, the best-equipped Optical Parlor in the Interior. Mr. Timberlake is still to continue his monthly visits through the Valley.

The G .W. V. A. will give a benefit dance in the Armstrong Drill Hall on Wednesday, July 30th. The last dance given by the G. W. V. A. was a huge success and everyone present had a splendid time, so don't pass up the opportunity of a few hours enjoyment next Wednesday eve.

REV. A. N. MILLER DEAD

Heart Trouble Carries Away a Pioneer in the Ministry Well-Known in this District.

The death occurred unexpectedly on Saturday evening of Rev. Arthur N. Miller, pastor of Ferris Road Methodist Church, South Vancouver, and president this year of the British Columbia Methodist Conference. Mr. Miller, who was 59 years of age, had not been well for several days, but was able to be about the absence of some of the regunning complained of acute pains in the vicinity of the heart. At 7.30 he passed away. Dr. G. B. Murphy attended, and is understood to have come to the conclusion that heart trouble was the cause of death.

The late Mr. Miller was born in Vaughan Township, Ontario, and spent his boyhood days on a farm near Wingham, Ont. He attended high school at Kincardine, and afterwards qualified for a teacher, acting in that capacity for several years. In 1884 he entered Victoria University, Cobourg. After studying for the ministry for eighteen months he responded to the call of the late Dr. Sutherland for volunteers for the Western mission fields, and came to British Columbia at the age of 24. He was sent to take charge of the Indian school at Port Simpson in 1885, and after three years' service there was stationed as missionary at Skidegate, Queen Charlotte Islands. Before going to Skidegate Mr. Miller was married at Port Essington to Miss Henrietta Reinhart, who was sent out from Ontario in 1885 as missionary teacher at Bella Bella, where she spent three years. After three years at Skidegate Mr. and Mrs. Miller were stationed at various places in British Columbia, including Langley, Mission, Eburne, Ladner, Enderby, James Bay, Grace Methodist Church, Vancouver, and Ferris Road Church, South Vancouver. Mr. Miller was elected president of the conference at New Westminster in May last.

Rev. Mr. Miller's eldest son Watson, served for two years in France, and after recovering from a severe wound, was killed by a shell while transporting food to his comrades. Harold, another son, was wounded at Vimy Ridge, but recovered, and has returned home. A younger boy, Horace, died at the age of 7. Other surviving children are Percy and Wilfrid, and Grace and Ruth, both of whom are in the service of South Vancouver School Board as teachers. Mrs. Miller survives her husband.—Vancouver Province.

Do not miss the opportunity of seeing "Hearts of the World" at Enderby Theatre, Friday and Saturday, July 25-26, with Saturday afternoon matinee.

ENDERBY NOTES

Mrs. Thos. Gray visited Enderby from Mara on Wednesday.

Mr. W. J. Lemke spent the week-end in Vancouver, with Mrs. Lemke and son.

Mr. C. G. Piper this week is finishing the repainting of the interior of the bank manager's residence.

Miss Esther Moffet, of Seattle, is visiting Enderby friends, arriving from the coast on Tuesday.

Mrs. Wm. Duncan is enjoying a visit from her sister, Mrs. E. B. Cochrane, from her Alberta home.

Why bake when you can buy such bread, cookies, rolls and cakes as are on sale at the Enderby bakery?

The Okanagan Saw Mills will furnish electricity every Wednesday during the summer months from 8 to 5 o'clock for the benefit of patrons with electric irons.

David Andrew and Alex Tommy got into an altercation Saturday while being driven to Salmon River, and one hit the other over the head with a cider jug. It cost him $10 and a jug. He was fined $10 and costs by Magistrate Rosoman.

Enderby's tax sale will be held on September 30th. Property on which taxes are delinquent can be kept out of the sale either of two w ys: (1) by paying all taxes vied in or before year 1917 —or, (2) by paying the current year's taxes with one-fifth-of all arrears. To avoid tax sale expenses payment must be made by September 15th.

MARA NEWS NOTES

Rain is badly needed for the vegetables and grain.

N. Pavlos went to Revelstoke on business Monday.

D. McManus is putting up hay on Geo. Little's place.

Harry Cecll was a visitor to Armstrong on Monday.

Chas Davidson came down for the week-end, returning to Naramata by Monday's train.

This week will about finish up the hay-making. While there are some good crops many of the fields are under average for this district.

Mara lake seems to be a favorite resort for motorists and others for week-end and Sunday outings. These would increase manifold if that small piece of road was built so that motorists could travel to Sicamous and Eagle Pass.

A PIONEER PASSES AWAY

George Patchett Sr. Suddenly Stricken by Pneumonia, After Becoming Overheated in the Field.

A pioneer resident of the district passed away on Monday evening last in the person of Mr. George Patchett, whose death took place at his home on the Back Enderby road. Deceased had gone out on Tuesday, the 15th, to fix a flume which was used for irrigation purposes. The day was the hottest of the season, and after becoming overheated Mr. Patchett sat down to cool off. He sat perhaps too long and as a result did not feel well during the remainder of the week. On Saturday he became worse and pleurisy was followed by pneumonia, the end coming about 9.30 on Monday evening last.

Mr. Patchett, who was in his 62nd year, was widely known in the district. He was one of the earliest settlers at Lansdowne, and his eldest daughter was the first white child born in Armstrong. He was engaged in the furniture business, etc., but finally settled down on his farm.

Mrs. Patchett was away visiting in Alberta when the illness occurred, but returned last Saturday, accompanied by her daughter, Christina. Deceased leaves to mourn his loss the mother and five daughters, Miss Mac, of Victoria, Mrs. White, and Christina, Leathie and Delhia, and two sons, Arthur and George.

GRINDROD NEWS

Mr. and Mrs. A. Kenward and children, of Revelstoke, are visiting friends at Grindrod.

Mrs. Mary Kile returned home from the States last week, where she has been visiting relatives for a few weeks.

Quite a number of Grindrod people drove over to the circus at Salmon Arm last week. Misfortune overtook one carload, who were held up on the hill by the heavy sand, miles from Salmon Arm.

Miss Helen Monk and Thelma Kenward visited Enderby on business this week.

The annual Sunday School picnic of the Presbyterian Church was held last Thursday afternoon at the farm of Donald Graham of Pleasant Valley. The day was one evidently made to order, though it was preceded by others of violent heat. Quite a number of parents and friends were present in addition to the children, and a most enjoyable day was spent by all.

ARMSTRONG WINS AGAIN

Mayor Wright has just received word from London, Eng. stating that the City had been successful in winning their case against the C. N. R. in the Privy Council.

Rural Schools and the Benefits Accruing from Consolidation

A writer in The Grain Growers' Guide of July 18th says:

"If I were to formulate an educational creed for the country school it would contain but two articles:

"1—The country child is entitled in every way to as good an educational opportunity as that enjoyed by the most favored city child attending a Canadian school today.

"2—To secure this right for the country child, people in rural Canada must expend their money on schools in a better way than they are doing now and have been doing in the past.

"I believe in the consolidated school because I am sure that it will lead towards the realization of the ideal expressed in the first article and incidentally make possible the second.

"The rural school of today is little better than that of 50 years ago. Where the mould-board has given place to the sulky plow, the cradle to the binder, the flail to the threshing machine—in fact, where all forms of farm operations have changed to keep pace with the march of progress, the country school has not changed and is today almost what it was half a century ago.

"The country child has rights. He is entitled to a 'square deal' in opportunities, to enjoy the best that the civilization of the world has thus far produced. Philanthropists are founding libraries and art galleries for city children, but who is doing a similar work for the children living in the fields? The desire for added educational advantages has sent many a child from the farm to the city. This is not to be looked upon with favor. The consolidated school is the only plan that will keep intact the country home, educate the child within the environment best suited for him and make him the intellectual equal of his city cousin. Any plan short of this is not only unjust to the individual who makes the farm his home, but is disastrous to country life and to sound ideals touching the productive industries.

"There is an industrial side to this problem that is worth considering. The 'new agriculture' means new conditions to the people who follow it. The principles underlying agricultural practice are becoming better known and farming is growing constantly more difficult. The old idea that the farmer does not require a great deal of education and that his education was quite complete when he knew how to plow, sow and rea p has been entirely changed. The agriculture of today is becoming scientific and to make good at this calling one must of necessity possess a knowledge of the soil, coupled with shrewdness, foresight and keen business ability. Yes, truly, agriculture considered from the modern standard is growing more difficult and will never be less so, for the conservation of fertility which is our national life cannot be entrusted to ignorant and untrained people. It will never be better suited to the man of low capacity than it is today, on the contrary it will constantly demand more ability and public policy will encourage that demand. Accordingly our people must be educated as farmers; not a few, but many; not here and there one, but whole communities of people, men and women together, bent not only upon getting the most out of the land, but also upon getting the most out of country life. By founding and maintaining good homes and good schools the men and women of the future may be brought up and educated to be a pride to this country, an unmistakable asset and a satisfaction to themselves.

"All this can neither be done by the weak, isolated country schools, nor can it be done indirectly by making use of the city schools for the purpose. City schools teach city life and the facts and atmosphere that go with city life. If we are to have a healthy country life and a normal country people, we must organize schools that can give us the best in education and yet be in the country and in daily contact with the form of life, farm children must of necessity become accustomed to in order to succeed in the calling they intend to follow.

Here are some of the advantages of consolidation:

(1) The system is best, for the schools can be better made and more thoroughly equipped.

(2) A graded system is possible and complete terms of school can be assured. Where three or more teachers are engaged, and one leaves, the remaining class can be distributed among the others until a new teacher can be obtained. The length of the school term would under these conditions not be entirely determined by the availability or scarcity of teachers.

(3) The mingling of pupils from various districts has a broadening and deepening influence.

(4) Higher branches of studies are taught.

(5) The cost of repairs and of heating one large school is less than that of four smaller ones.

(6) With a larger area to draw from better trustees are more likely to be secured. The possibility of one prominent family 'running' the school is also lessened. Class distinction, which the old district school unconsciously fostered, is broken down and removed.

(7) Larger classes add to the interest of both the pupils and teachers.

(8) Each teacher will have fewer classes and hence longer time to devote to his or her own preparation and to teaching each class.

(10) Pupils are healthier. They do not walk in the rain and then sit in wet shoes and dripping clothes all day.

(11) The pupils are under care of responsible persons all day, the boys being thus removed from the temptation to quarrel and other misconduct on the way to and from school.

(12) In the consolidated rural school all children from the entire district meet, mingle, compete, strive, make friendships and learn to work together. All those attending the high school grades return home daily and doing their alloted work or chores morning or evening, keep in touch with the home, the farm and its affairs, and remain under the parental care during the most impressionable period of their lives. There is no longer any need for the children to attend at private expense distant boarding schools or to pay board in the nearby village to attend high school, thus making unnecessary the present methods of supporting a double system of education for country children.

(13) In short, the consolidated rural school brings to the country that thing, the absence of which has driven so many families to town and so many boys off the farm, namely, a well-classified, well equipped and well taught school.

GUARD AGAINST FIRE.

One Reason Why.

THURSDAY, JULY 24, 1919

POWER PLANT AGITATION

The fact that from 5,000 to 10,000 horsepower, daily 24-hour service, for 12 months in the year, is flowing to waste down the Spallumcheen river past Enderby, should not be longer ignored. This fact was stated at the Hydro-Electric Convention held at Vernon last week, by Government hydro surveyors who have taken measurements of the water flow for a number of years. According to the report of the Dominion Conservation Board, there is at the Skookum Chuck, a 30 to 40-foot head, with a reserve from 1,600 square miles of watershed. This water flow is capable of being harnessed at very little cost so as to produce from 5,000 to 10,000 horsepower.

It will be remembered that six or eight years ago, application was made in the regular way for water-right privileges at this point, ostensibly for a pulp mill. Whether this right was ever given by the Government, or by whom it was obtained, would require some searching to discover. But the big fact is that the power is there: that it is not being made use of, and that there is need for the utilization of this power. With Salmon Arm, Armstrong and Vernon facing a deficit each year on their electric light plants, and with no possibility of greatly reducing the costs of operation, it behooves these towns, with Enderby, to get busy and keep busy until they can interest somebody in the hydro-electric proposition, with the object of reducing costs and getting better service both for house and for power.

The subject of water power is one of great and growing interest in Canada. It is a subject that we have a duty to perform in studying. Dr. Geo. Otis Smith, director of the United States Geological Survey, states that, in the long run, the utilization of water power means the saving of human nergy for purposes to which power-driven machinery is not yet adapted. The mere change from steam power to water power is not only significant of lower costs in manufacturing and of the saving of the earth's stored fuel for its more important uses, but it relieves the labor necessary in mining the coal and the still greater burden of transporting it. Every water power harnessed and displacing steam power implies, therefore, a great band of laborers in the mine and on the railways freed from this particular necessity of toil for other and more useful work.

Few realize the important relation which Canada'a wealth in water power bears towards reaping the full benefit from her numerous other resources. It is true that these other resources would not otherwise be entirely lost to the country, but they would have to be exported as raw material in its most primary state with a minimum return to us. The presence of cheap power which is almost invariably found side by side with these other resources, facilitates their development, while their full industrial value is retained in being able to deliver them as a fully manufactured product.

The proper effort put forth should be able to induce a company of capitalists to take hold of the Chuck water power, but before this is done the effort of the convention to induce the Government to appoint a Hydro-Electric Commission for this Province to enable the development of this power under conditions similar to those governing the operations of such commissions in the Eastern Provinces.

TRAM LINES FOR OKANAGAN

A great deal of valuable information was brought out at the Hydro-Electric convention at Vernon last Thursday afternoon, particularly in relation to the possible water power in the district. In the report of the convention to be found on another page of this paper, fuller detail will be found in this connection. For the purpose of this article reference to the report is sufficient.

The main point of interest is that there is ample water power for electrifying the Okanagan from Kamloops south. The next point to be considered is that of market available for the juice if it is produced. This point will require some investigation before anything like an accurate statement can be made. It is safe to say, however, that the market is here for all the current that will be produced. True, the towns are scattered, and the Valley is not thickly populated just now. But population will come with facilities for developing the land and easy access to market.

The opinion of the convention was strongly in favor of asking the Government to electrify the Canadian National Railway, now in the course of construction from Kamloops to Kelowna. On second thought this does not seem to be a feasible proposition. The Canadian Northern, like the C. P. R., runs from the central point in the Valley to connect with the mainline. It carries through cars, or will when it is in running. It could not be made into an electric line just for the Okanagan. It does not seem reasonable to ask that the line be operated by electricity here while all through business over the line is hauled by steam.

What is really wanted in the Okanagan in order to rapidly develop the district, is a tramline system spreading out over the Valley from a central assembling point—say Vernon—and tapping the important valleys within the Okanagan, giving rapid transit and, say, two trips a day, or more frequently if required. The mainline trains into the Okanagan help in the development of the Valley; but the development is and will be slow, and much of the Valley will remain non-productive for many years. As the Irishman put it, he had no use for the railways: he lived "tin miles away from it before it was built into his district; he boosted for it, and talked to get it built into his district; it was built, and after it was built he still lived tin miles away."

The point is that, while an additional line of railway into the Valley may assist in giving more ready access to market, and may open up that certain section through which the road passes, it never can be the mportant factor in the development of the Valley that a system of tram lines would be, opening up the various valleys within the Valley.

The day may be somewhat distant, but we shall no doubt see it, when the Okanagan Valley will have a system of inter-urban lines running from Vernon to the many districts now reached only by wagon road: for instance, to Lumby, thence by way of Trinity Valley and Mabel Lake Valley to Enderby and Armstrong and back to Vernon; a circuit that would bring thousands of tons of produce where today the district is not producing hundreds of pounds.

With hydro-electric power available for this, and for the electrification of every town and every farm and country home within the Valley, it is not unreasonable to hope that the movement started at the Hydro-Electric Convention will be taken hold of by the Government and that something worth while will come of it.

PLEASURES OF LAKE AND STREAM

Last Sunday sixteen autos were parked at one time along the road at Mabel Lake and out upon the lake, in boats, such as could be had, pleasure parties drifted about or were camped along the shore, all happy to get away from town environment and out away with Nature and the things of Nature's God. Particularly numerous were the children and young people, who enlivened the scenery by their hilarious abandon as they waded or bathed in the warm waters along the sandy beach; some adrift on log rafts, some in boats, and some splashing in the serf.

Here would be made one of the most attractive pleasure resorts in the interior of B. C. if it were more accessible for auto traffic. True, many enjoy the 23-mile trip from Enderby, even in the present condition of the road, but the number is small compared to what it might be if road conditions were better.

The Mabel Lake road is not an easy road to keep up. It was, in places, poorly laid out and poorly built in the first place, and what little work has been put upon it has not been sufficient to make much of an impression on it. It is reported considerable road work has been promised for this season in this direction, but be it known, the road to Mabel Lake, like the streets of that other glory hole, are paved with promises all very good.

Another thing which the settlers of Mabel Lake Valley have been praying for a long time, is the erection of a government telehone line from Enderby. This line is greatly needed, and, running as it would through a district fairly well taken up by settlers, it would serve a number of residents along the way as well as the lumber camps near the lake and the lumber company's headquarters at the end of the road. Petitions have gone in to the Government for the erection of this line, but no attention has been paid to the request of the petitioners. A few years ago the Government telephone line was built to parallel the line then in existence of the Okanagan Telephone Co., from Enderby to Vernon. There was about as much demand for this paralleling line to Vernon as there would be for two tails on a dog. At the same time there was the demand for this line to Mabel Lake. It is to be hoped the Government will either build this telephone line to Mabel Lake or induce the Okanagan Telephone Company to do so.

CO-OPERATION VS. PROFITEERING

At the outset of the war food prices in Great Britain rose enormously as a result of the mad rush of people with ready money to lay in supplies for weeks or months ahead. The English and Scottish Wholesale Society, finding that they had supplies to fill a normal deman, advised their local stores to restrict sales to individuals to their average rate of purchasing, but not to raise their prices. As the general public swung over to the Co-operative stores, it became necessary for the officials to instruct their stores to sell only to members. There was another rush to become members, so that the stores had temporarily to refuse to take in new members until normal conditions began to prevail again. The prices of private dealers continued to soar until in some cases they were more than twice those of the Co-operative stores, and when the popular agitation for regulation of prices came, the Government Officials, because of the consistent stand of the Co-operatives, accepted the prices of the Wholesale Society as the standard.

HELP PREVENT FOREST FIRES

The Provincial Forestry Department is carrying on a commendable advertising campaign in the hope of awakening interest on the part of campers and men in the hills, in helping to prevent fires. Here are some rules suggested by the United States Forest Service, which are equally applicable to Canada. Their observance would go far towards lessening the tremendous toll taken each year by forest fires:

1. **Matches**—Be sure your match is out. Pinch it before throwing it away.

2 **Tobacco**—Throw pipe ashes and cigar or cigarette stumps in the dust of the road and stamps or pinch out the fire before leaving. Don't throw them into the brush, leaves or needles.

3 **Making Camp**—Build a small campfire. Build it in the open, not against a tree or log or near brush. Scrape away the trash from all around it.

4 **Leaving Camp**—Never leave a campfire, even for a short time, without quenching it with water and then covering it with earth.

5 **Bonfires**—Never build bonfires in windy weather or where there is the slightest danger of their escaping from control. Don't make them larger than you need.

6 **Fighting Fires**—If you find a fire, try to put it out. If you can't, get word of it to the nearest forest ranger at once.

Where worries cease

Not to Bathe In

Vancouver is a city with a host of summer-time delights which other cities do not enjoy. F'rinstance, the young ladies there have acquired the habit of wearing bathing suits on the streets, in jitneys and street cars, to and from English Bay. They wear a cover-all which has a delightful way of showing what's underneath—if the bathing suit is of particularly up-to-the-minute cut. When the staff of this family weekly takes a holiday it's going to be Vancouver for us, in the month of July.

PUBLIC NOTICE

Notice is hereby given that I have disposed of my merchandise business at Mara to N. Pavlos, and I bespeak for him a continuance of the patronage I have been favored with.

I will liquidate and collect all accounts.

Overdue Shipment of Men's
Good Work Boots and Boots for City Wear

Owing to the strike condition these boots were held up at Winnipeg for weeks. They have now reached us on the eve of our stock-taking. We have decided, however, to put the

July Reduced Price Ticket on them

No 111—City Boot for Men
Price, $6.98
Fine quality Gun Metal Blutchers also in fine Box Calf Leather, medium toe and wide fitting; a capital boot; worth $7.50; sizes 6 to 11.

No. 894—Prospector's Boots
For $7.95 pair
Eleven inches high; in Tan Leather; all lace-up Bellows tongue to the top; very comfortable; guaranteed for the hardest wear; sizes 6 to 11; worth $9.95.

No 931—Work Boot
For $4.95 pair
Men's solid all-leather boots; double-stitched soles; Urus Calf Leather; soft, flexible uppers with toe cap and bellows tongue; sizes 6 to 12; regular $5.95 pair.

No. 931—Work Boots
for $4.95 pair
A lighter boot than the above but of polished calf leather; especially lined with a fine-finish leather; toe cap and double soles; sizes 6 to 12; regular $6.00.

No. 127 Work Boots
for $4.95 pair
Another quality in a solid leather boot; of soft Urus Calf leather; every size from 6 to 11; double soles, stitched, with the bellows tongue and toe cap; regular $5.95.

No. 951—Survey Boots
Price $5.95
Twenty pairs of beautiful tan Elk Survey Boots; as comfortable as a dress boot; double-stitched soles; a splendid boot and worth $7.00 sizes 6 to 11.

URUS CALF LEATHER is made from selected hides. These boots are tanned by the very best method and meet the demand by working men for a soft and mellow leather. This boot is as near *Waterproof* as it is possible to make leather. (Block.)

THE WALKER PRESS. *Enderby, B. C.*

IT PAYS TO ADVERTISE

WHEN CATTLE BLOAT

The danger to the animal from acute bloating is not that the distended stomach may rupture, for such an accident is almost unknown. The pressure of the gas-distended stomach, however, exerts a dangerous pressure upon the heart and lungs, with the result that animals dying from acute bloating usually die of strangulation through inability to breathe with their compressed lung tissue.

The stock owner should guard against the bloating of his cattle by every precaution at his command. Clover or other green vegetation, if eaten when wet by dew or rain, seem to be especially liable to ferment before leaving the first stomach of the animal that has fed upon them. Eating excessive amounts of middlings or corn meal will also cause bloating. It also occurs in cattle as a result of becoming choked. The principal cause, however, is over-eating succulent green forage, such as clover, green corn or cabbage.

To prevent bloating in cattle, the animals should be shifted by easy stages, from dry or scanty feed to abundant and and luxuriantly growing fodder They may be allowed to feed from the good forage for an hour on the first day they are given access to such grazing. A full hour may be allowed on the second day, and by continued slow steps and by gradually lengthened stay in the tempting feed, the danger of loss from bloating will be largely overcome.

But in case the first evidence of a too protracted stay in the heavy growth of forage should be that the owner notices one of his animals with sides distended—and, perhaps, even lifted above the level of the backbone, he must act quickly. Removal of the gas from the paunch will quickly bring relief. If a veterinarian is within reach he should be summoned at once. If a surgeon is not available, the owner should immediately attempt to bring relief to his animal.

Many cattle owners keep a trocar and canula constantly on hand and thoroughly understand its use. The trocar is a sharp-pointed rod provided with a metalic sheath or canula which leaves the point of the trocar exposed. The spot to be selected for inserting the trocar is a point equally distant from the last rib, the hip bone, and the lateral bony projections from the spine in the region of the loins. Here a small cut about three-fourth of an inch long should be made through the skin with a small knife, and then the trocar with canula attached may be pushed through the cut into the paunch. The trocar is then removed, allowing the gas to escape through the canula. The canula should be retained in place so long as any gas escapes through it. Sometimes several hours are necessary,and the canula should be firmly tied in place. An attendant should remain near the animal, if possible, so long as the canula is in the paunch.

If the animal is not distressed by the bloating, and the swelling of the body is not great, or when the alarming conditions have been removed by the use of the trocar, it is best to resort to internal medicine to allay the formation of gas. Two ounces of aromatic spirits of ammonia in two quarts of cold water should be given every half hour, or half an ounce of chloride of lime dissolved in a pint of tepid water may be given every half hour, until the pressure of the bloating has been removed. A dose of purgative medicine is usually beneficial after the bloating has disappeared. For this purpose one pound of Glauber's salts will usually prove effective. Care should be used in administering the fluid medicines. Take time. Do not hold the cow's head too high. Keeping the animal's head raised so that her nose is slightly higher than the level of her face will allow her to swallow without interference.

EVIDENCE OF PROGRESS

Amount of Painting Going On is Good Sign of Prosperity and Pride in the District.

The foundation reason for painting is protection of the thing painted. We should never forget that. But there is another great reason for painting, and that is the appeal of pride in appearance. This is quite human. It is seen in the matter of clothes. Primarily clothes are to keep us warm, but a suit is discarded while it is still warm because it is shiny, out of shape, or slightly faded. In other words, one feels that it would compromise their standing if they were to wear it. So it is with the painting of houses, both without and within.

Since Spring opened there has been an unusual amount of painting and renovating of homes and outbuildings in this district. In progressive, proud communities, houses are painted every three or four years. Progressive citizens are not satisfied with the looks of their houses after three of four years' exposure to weather.

As good citizens we should not only see that every person knows that structures will deteriorate if unpainted, but we should also try to make people as proud of the appearance of their homes as their more progressive neighbors. This work is peculiarly one for local ex-ation. Everyone knows that a newly painted house is likely to start the whole neighborhood to slicking up. It becomes contagious.

Cherry Crop Nearly All Picked

The bulk of the cherry crop, says the Summerland Review, is picked and marketed now, and by the end of the present week there will not be many more to come except sours and semi-sours. From various reports received the growers are quite hopeful of good prices again this season, and although early in the cherry formation period many growers feared there would be a very light crop in some varieties, a better crop developed than was anticipated.

Short Potato Crop

Reports from every section are that the potato crop of B. C. is very short, running from two to four tons per acre. It will be seen, before the season is out, that high prices will be paid for spuds, and that Chinese growers will wax fat. This is not an unusual occurrence. Chinese potato growers canot see any farther into the future than the rest of us. But they reason in a logical way. Last fall potato prices were low, and many of our local growers pitted their crop rather than accept the fall price offered. This spring when the pits were opened, it was found that the price expected did not matrialize, and potatoes were sold on a declining market. Under these circumstances, fewer growers put potatoes in. If prices had been high last fall and this spring, more potatoes would have been planted; there would have been a larger crop and lower prices. The Chinese growers plant potatoes every year. They know when white growers plant less it is good business for them to plant more. They study the market better than our white growers.

Kinaski-Smith

The wedding took place last Thursday afternoon of Joseph Byron Kinaski of Vancouver, to Margaret May Smith, of Glenemma. W. A. Smith acted as groomsman, while the bride was assisted by her sister, Eleanor. The ceremony was performed by Rev. W. Stott. The pretty event took place at the home of Mr. and Mrs. W. A. Smith, and after the ceremony the guests assembled around a beautifully decorated table where lunch was served.

Mr. and Mrs. Kinaski visited in the neighborhood for a few days before proceeding to their home in Vancouver. The bride is well known in Armstrong, and the wedding, though quiet, was of wide interest. The Advertiser joins with many friends in extending to Mr. and Mrs. Kinaski congratulations and best wishes.

An Undisputable Statement

Owing to big turnover we buy our stock at less than usual---

In consequence we sell for less. In fact, on goods
for which you pay $8.50
We sell for $4.80
Some difference, to your loss $3.70
It will pay you to investigate the above statement and compare prices.

Covers the Okanagan Valley

Okanagan Telephone Directory
offers most complete service to advertiser at comparatively small cost for the service rendered. Read:

Wide Circulation

The Okanagan Telephone Directory goes into every office and almost every home in the Valley; from Penticton north to Sicamous; it circulates in every town and district.

Constant Circulation

The Okanagan Telephone Directory is always right to hand and is referred to constantly. There were 2100 printed of the current issue, and as the average number of calls is eight per subscriber, the number of references daily to the directory is, say, 16000. Allowing say a third of these calls made from memory, it still leaves 12,000 times a day that the directory is taken up.

A Medium that is Not Discarded

Did you ever see a discarded telephone directory of a current issue? It is always being used, and any advertisement is so constantly seen that even if it passes unnoticed at first, it gradually forces itself on one's mind. You get persistent advertising; that's what counts.

A Valuable Medium

Apart from the listing of names of telephone users, there is the classified section, which contains all the businesses in which everybody engages. This is the great, reliable reference of all classes—there the ad does its work. This section is of the greatest help to the office man and the householder.

A Medium that is Recommeded

Ask the man who advertises in the telephone directory—don't accept our say so—refer to our customers.

A Medium that Others Use

Look at the new advertisements in each telephone directory. The current issue is larger than the previous issue, and the increase in pages in largely to accommodate advertisers. It would not be so if directory advertising didn't sell the goods.

Rates are an Eye-Opener

Telephone Directory advertising rates will immediately strike you as a favorable surprise. In comparison with other rates, other mediums and other circulations, they will at once appeal to you as worthy of consideration.

So, wehn our man calls in to talk directory advertising with you, let him give you the facts. Ask him to "show you"—ask him questions—have him produce the facts.

If you have advertising to place, call up our advertising man.

Phone Okanagan Telephone Directory
Advertising Department. We pay Phone charge

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Wharf at Okanagan Centre, B.C." will be received at this office until 12 o'clock noon, Tuesday, August 5th, 1919, for the construction of a public wharf at Okanagan Centre, Yale District, B.C.

Plans and forms of contract can be seen and specification and forms of tender obtained at this Department, at the office of the District Engineer at Chase, B.C., and at the Post Office, Okanagan Centre, B.C.

Tenders will not be considered unless made on printed forms supplied by the Department and in accordance with conditions contained therein.

Each tender must be accompanied by an accepted cheque on a chartered bank payable to the order of the Minister of Public Works, equal to 10 per cent of the amount of the tender. War Loan Bonds of the Dominion will also be accepted as security, or War Bonds and cheques if required to make up an odd amount.

Note—Blue prints can be obtained at this Department by depositing an accepted bank cheque for the sum of $10, payable to the order of the Minister of Public Works, which will be returned if the intending bidder submit a regular bid.

By order,
R. C. DESROCHERS,
Secretary.
Department of Public Works,
Ottawa, June 27, 1919.
