

# Bridging the Gap Between Theory and Practice for Nurses in Transition

Synthesis project 2013/2014 Karen Hu, Karen Mann, Heidi Voelker

# Our project

- The goal of the project was to come up with a workable case study
- © Create a patient, create a medical history and create scenarios to help facilitate learning for new grads or nurses in transition

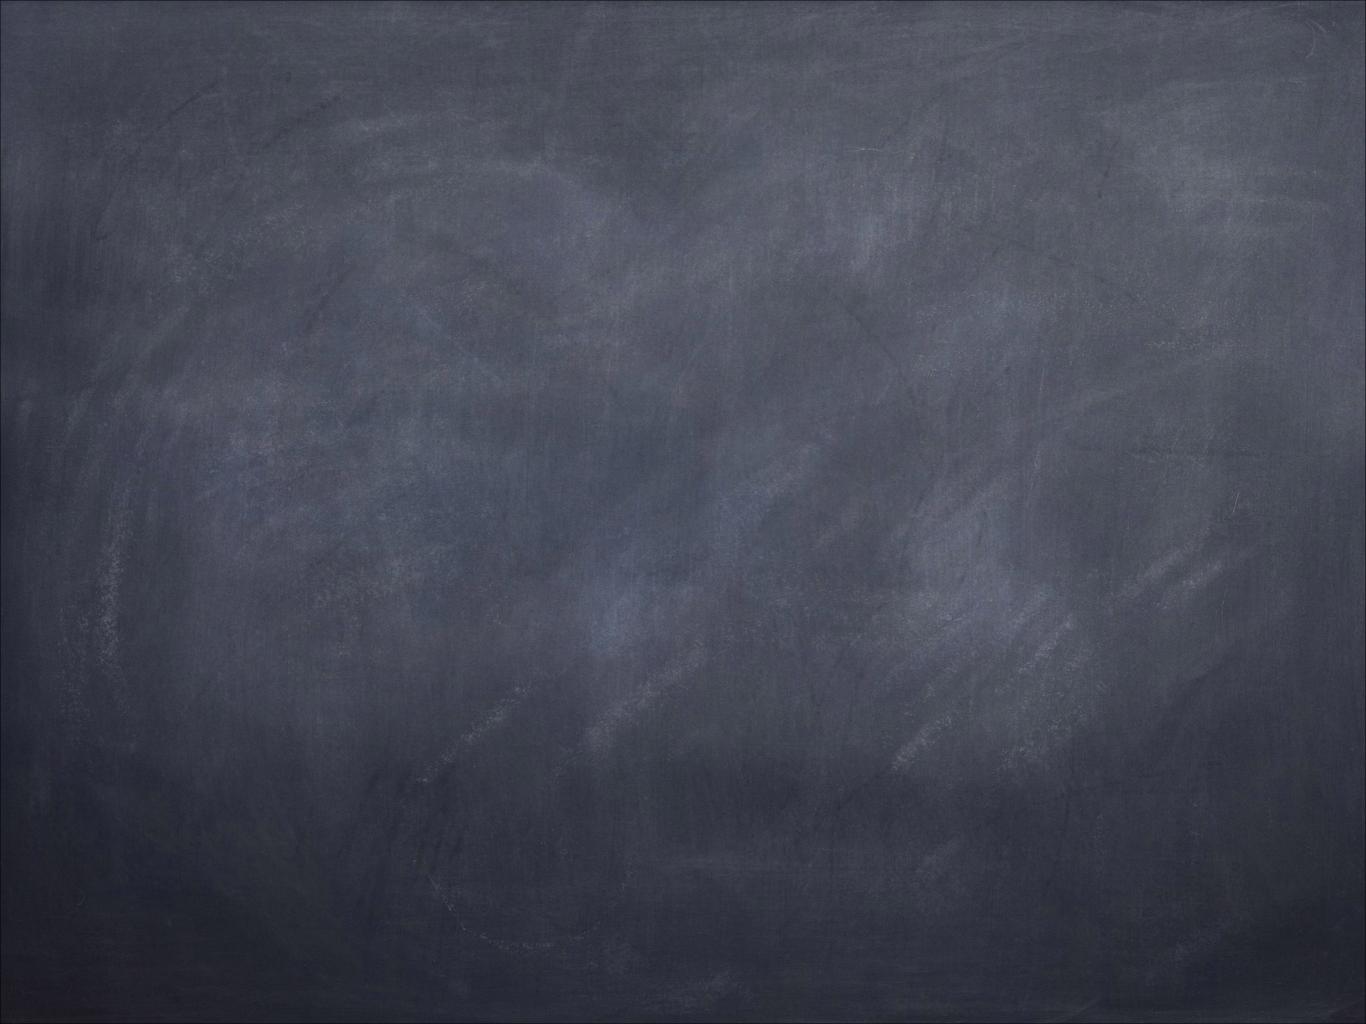

# We introduce ...

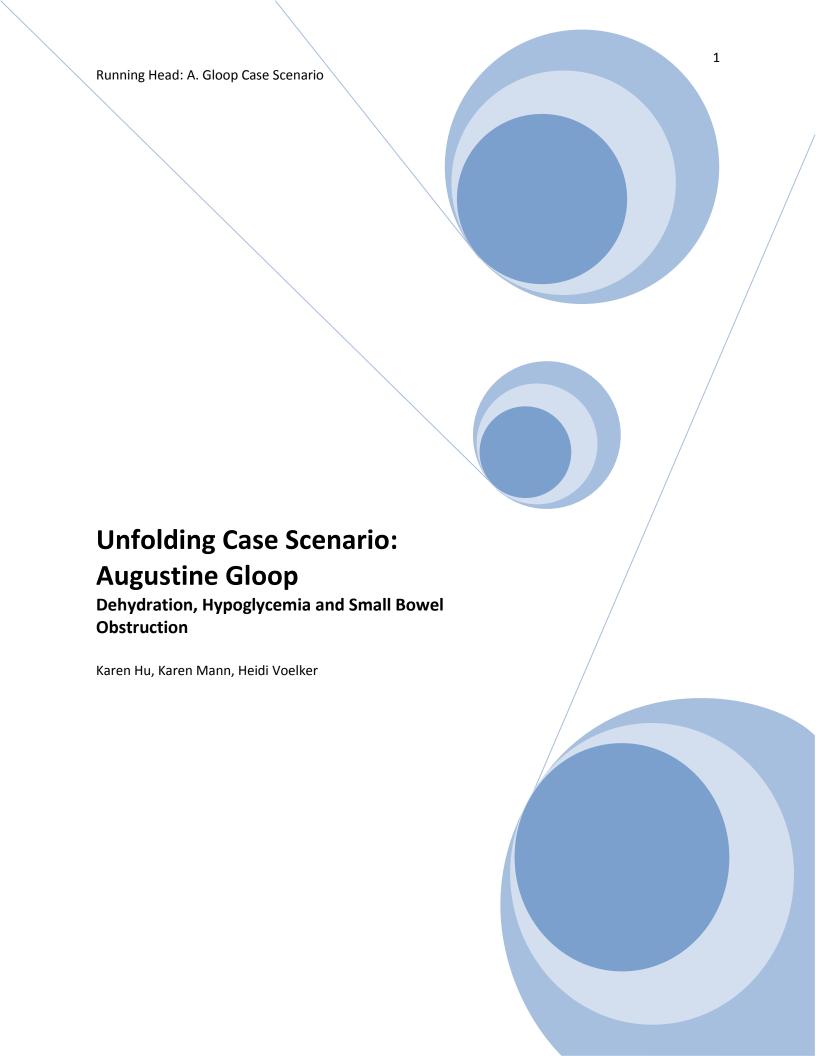

Augustine Coop

# Patient History

o Ms. Augustine Gloop is a 74 year old Caucasian female. She weighs 170lbs and is 5'4. She works in a flower shop part time. She lives in an apartment on the second floor with her 2 cats. She tries to take the stairs when she feels up to it although there is an elevator as well. The flower shop is on the bus route and her bus stop is three blocks from her apartment. She is single, has no children, but does have a couple of good friends that she gets together with twice a week.

# **Patient History:**

Ms. Augustine Gloop is a 74 year old Caucasian female. She weighs 170lbs and is 5'4. She works in a flower shop part time. She lives in an apartment on the second floor with her 2 cats. She tries to take the stairs when she feels up to it although there is an elevator as well. The flower shop is on the bus route and her bus stop is three blocks from her apartment. She is single, has no children, but does have a couple of good friends that she gets together with twice a week.

#### Past Medical History (PMH)

Coronary artery disease (CAD), hypertension (HTN), Type 2 Diabetes, overweight (BMI 29.2), osteoporosis, patient reported history of bowel problems (constipation/diarrhea)

#### Past Surgical history (PSH)

Appendectomy and hysterectomy.

#### **Current Medications:**

Atenolol (Tenormin), Atorvastatin (Lipitor), Lisinopril, Aspirin, Metformin,

#### Allergies:

She has reportedly multiple allergies including penicillin (PCN), Morphine, Altace (ramipril), Prevacid (lansoprazole), Norvasc (amlodipine)

# **SCENARIO 1**

#### **Scenario 1 description:**

#### **Objectives: Assess competency in:**

- 1. Comprehensive physical assessment
- 2. Communication
- 3. Critical thinking

#### **Scenario 1 Description:**

A 74 year-old female with type 2 diabetes diagnosed for 5 years. Her friend brought her to the emergency department because of drowsiness, confusion, abdominal pain, states 3 day history of nausea/vomiting, one week history of loose stools.

#### **Nursing Report:**

74 year old female treated in ED for hypoglycemia and dehydration related to low CBG (1.8 mmol), a one week history of loose stools and a 3 day history of nausea and vomiting. She also complained of distended abdomen with crampy abdominal pain. She had no urinary complaints. The patient has been transferred to medical unit for observation and insulin management. Query further investigation of abdominal pain, diarrhea and nausea. Physician to follow up.

# **Simulation Based Learning Activity**

**Guided Reflection/debriefing Time:** 10 minutes

**Expected Activity Run Time:** 15 minutes

Location: TBA

**Location for Reflection: TBA** 

# **SCENARIO 1: info sheet for participant**

A 74 year old female was brought into the emergency department at 0400 and was treated in the ED for hypoglycemia and dehydration related to low CBG ( 1.8 mmol). She also has not yet diagnosed abdominal pain, reported a one week history of loose stools and a 3 day history of nausea and vomitting. The patient has just been transferred to your medical unit for observation, insulin and hydration management. Physician to follow up tomorrow morning. It's 0730, you are the nurse admitting this patient to the unit. You receive the following nursing report from the Emergency Department

Vital signs stable, afebrile. Complaining of nausea/vomiting and abdominal pain since admission. Gave 50mg dimenhydrinate at 0600. Patient is a type two diabetic with a history of other diagnoses. Blood sugars stabilized. IV was inserted in the ED, running at 120cc/ hr, no issues with voiding. Can ambulate and mobilize independently with supervision.

	TIME
CLINICAL COURSE OF THE SIMULATED SCENARIO EVALUATION TOOL	

PHASE 1	Patient Presentation :	In this phase, participants should	15 mins
	Neuro	- collect baseline data and complete admission	
Initial	- alert and oriented, all normal findings	assessment	
Assessment	Vital Signs	- complete focus assessments on GI	
– Admission to medical	- BP 138/78 - HR 90	- identify risk factors for deterioration of status  Demonstrated actions	
unit at	- RR 18	<u>Demonstracea actions</u>	
0730	- O2 Sat : 99%	☐ introduces self	
	- Tempt: 36.5	☐Safety equipment check	
	- CBG 8.9 mmol	☐ Assess level of consciousness	
	Resp	☐ Complete full pain assessment, including use of pain scale	
	<ul> <li>breath sounds clear throughout all lung fields</li> </ul>	☐ Performs a head to toe assessment	
	<ul> <li>equal entry bilaterally to both bases</li> </ul>		
	<ul> <li>no adventitious sounds</li> </ul>	<u>Vitals</u>	
	<ul> <li>no complaints of chest pain or shortness of</li> </ul>	takes oral temperature	
	breathe or accessory muscle use	palpates and auscultates pulse, noting quality of heart rate,	
	<u>Cardiac</u>	sounds and rhythm	
	<ul> <li>heart rhythm regular</li> <li>S1 S2 sounds noted</li> <li>weak pedal dorasalis and posterior tibial pulses palpated with +1 edema in lower extremities</li> <li>strong radial pulses, cap refills less than 3 seconds</li> </ul>	manually obtains BP uses oximeter to obtain SpO2 Assess respiratory rate, depth and WOB Records vital signs in appropriate documentation Interprets any significant findings and trends in vitals Checks blood sugar	
	<ul> <li>Pain</li> <li>rates 7/10 at lower abdomen</li> <li>sharp, crampy and colicky and has been on-off over the past few days</li> <li>no analgesics taken prior</li> <li>moving makes it worse, nothing seems to help</li> </ul>	Respiratory  Evaluates client's respiration rate and WOB  Ask about coughing, sputum, SOB and chest pain  Auscultates anteriorly and posteriorly bilaterally  Documents any significant findings appropriately	

<u>Skin</u> - -	warm, pink scaly skin particularly on lower extremities normal skin turgor no rashes or pruritis	Cardiac  ☐ Auscultates for heart sounds and HR, recognizes S1 and S2 sounds and checks heart rhythm ☐ Palpates radial and pedal pulses ☐ Recognizes edema in lower extremities	
Muco	us Membranes	Pain	
-	dry, chapped lips oral cavity dry	performs pain assessment using PQRST guideline recognizes pain as nursing priority and uses data obtained to formulate nursing diagnoses and potential causes	
Gastr	o-Intestinal *		
-	abdomen is distended bowel sounds in all four quadrants with hyperactive bowel sounds in LUQ	Skin  Assesses CWMS, particularly due to dehydration diagnose	
-	surgical scar from previous surgical incision below umbilicus diffuse tenderness upon palpation no palpatable masses	Mucous Membranes  Assesses mucous membranes particularly due to dehydration diagnose	
- - -	colour of abdomen matches overall skin increased pain in abdomen upon palpation mild nausea at this time, no vomiting since admission last BM was loose, liquid stool before admission	Gastro-Intestinal Performs GI assessment, recognizes abnormal data Assesses Hx of bowel movements, nausea and vomiting notes distention, previous scars, auscultating first for bowel sounds, then palpating	
<u>GU</u> - -	voiding clear, dark yellow urine 3 hours ago reported by patient no pain or burning sensation with voiding	☐ Interprets data and further performs a focused GI assessment and formulates nursing diagnoses and potential causes  GU ☐ Assesses voiding frequency and urine quality as per patient report	

OTHER	reviews medical orders and confirms they are appropriate for the
- participant has access to patient's chart which includes: - client history - transfer orders - admission history - Medical orders - Lab work - Diabetic record - MAR - Fluid balance ( last 24hours) - SBAR sheet	reviews medical orders and confirms they are appropriate for the client's situation  Reviews patient Hx, lab work and assessment data, able to predict and identify potential clinical problems and risk factors for deterioration of status  using data collected, recognizes and justifies any medical orders that should be included or changed at this point in time, proceeding to call physician  Uses SBAR if necessary

#### **Debriefing/Guided Reflection Questions for This Simulation**

(Identify important concepts or curricular threads that are specific to your organization; use general prompts and focused questions to guide reflection and discussion)

Use an organized and systematic debriefing process such as reaction, analysis, summary (see below)

#### Reaction Phase (beginning)

Participants are encouraged to express their initial emotional reactions to the simulation and the instructor provides information or facilitates a conversation that clarifies the facts underlying the simulation Questions are directed toward feelings, reactions, observations.

- What went on/happened?
- How did you feel about that?
- Who else had the same experience? Who reacted differently?
- Were there any surprises/puzzlements?

#### Analysis Phase (middle)

Allows participants to make sense of simulation events, their concerns, and to move toward accomplishing simulation objectives.

Questions are directed toward making sense of the experience for the individual and the group and drawing on the principles or generalizations

- How did you account for what happened?
- How might it have been different?
- What do you understand better about yourself/your group?
- What might we draw/pull from this experience?
- What did you learn/relearn?
- What does that suggest to you about [communication/conflict/etc.] in general?
- Does that remind you of anything? What does that help explain?
- How does this relate to other experiences you've had?

#### Summary Phase (end)

Signals the end and reviews salient points. Translate lessons learned from the debriefing into principles that participants can take with them to improve their practice. The debriefer may summarize important points if the participants did not cover them or may recommend reading or activities participants can pursue to improve.

Questions are directed toward having participants summarize what they learned and how they will apply this learning to practice

- How could you apply/transfer that?
- Given similar circumstances, what might you do differently next time?
- How could you make it better?
- What modifications can you make work for you in your practice?

# **SCENARIO 2**

# **Scenario 2 description:**

#### **Objectives: Assess competency in:**

- 1. Comprehensive physical assessment
- 2. Communication
- 3. Critical thinking
- 4. Clinical Decision Making

The Participant receives the following information:

#### 4 hours later:

As you are gathering the glucometer machine to do Ms. Gloop's CBG, you note that her call bell is activated and you respond. Ms. Gloop is vomiting over the side of her bed. Her friend is in the room holding a basin and a towel, trying to help. The friend is concerned and asking a lot of questions.

SBAR communication, anticipated interventions and clinical decision making around the care of a patient with diabetes and suspected small bowel obstruction

# **Simulation Based Learning Activity - 2**

Date Created: Jan	urary 24th 2014	Date Revised:	Feb 2 2014

Location for Reflection:	TBA		

# **SCENARIO 2: information sheet for participant**

4 hours later: As you are gathering the glucometer machine to do Ms. Gloop's CBG, you note that her call bell is activated and you respond. Ms. Gloop is vomiting over the side of her bed. Her friend is in the room holding a basin and a towel, trying to help. The friend is concerned and asking a lot of questions.

#### **Vital Signs**

- BP 132/82
- HR 100
- RR 20
- O2 Sat: 99%
- Tempt: 37.8
- CBG 10.6 = sliding scale

#### TIME CLINICAL COURSE OF THE SIMULATED SCENARIO 2 15 min In this phase, participants should... manage patient who is vomiting manage friend's concerns and questioning perform a focused abdominal assessment and collects data Communicate findings with Physician using SBAR communication tool Engage in critical thinking and clinical decision making regarding the care of a diabetic patient with a possible bowel obstruction and identify rationales for nursing interventions **Demonstrated actions: Patient Presentation:** PHASE 2 ☐ the nurse dons appropriate PPP **The Patient is Vomiting:** the nurse provides support and reassurance for patient physically Vomiting (projectile) Focused GI ☐ the nurse positions patient in appropriate position to avoid Vomit is odorless slightly yellow and mucousy assessment aspiration Neuro - Prior to ☐ obtains vitals alert and oriented, all normal findings lunch on ☐ obtains CBG **Vital Signs** medical ☐ Completes focused GI assessment unit at BP 132/82 1130 HR 100 **Gastro-Intestinal** RR 20 Performs GI assessment, recognizes abnormal data O2 Sat: 99% Assesses Hx of bowel movements, nausea and vomiting Tempt: 37.8 notes distention, previous scars, auscultating first for bowel **CBG 10.6** sounds, then palpating **Gastro-Intestinal** Interprets data and further performs a focused GI assessment nausea persists and formulates nursing diagnoses and potential cause abdomen distended Indicates nursing interventions no bowel sounds upon auscultation surgical scar from previous surgical incision below umbilicus increased pain in abdomen upon palpation no BM since admission has had sips of juice and water Abdominal pain is 8/10 - cramp like and colicky subsided minimally after vomiting

# **SBAR COMMUNICATION TOOL**

Providence Pl	Physician Paged: Caller:	Time:
	I am calling about (patient's name and location)	
	The patient's code status is	·
	I am calling because I am concerned about	
Situation		
	(e.g. the patient's respiratory status)	
	The patient is in the hospital because  Vital signs are:	
	BP P RR O <sub>2</sub> sat T	•
	II Previous vital signs (look for a trend)	
	BP P RR O <sub>2</sub> sat T	<u> </u>
H	Current medications	-
Baskensanad	Allergies  O2 //min OR % for (length of time)	mporinon:
Background	Lab results - include date and time test was done, results of previous tests for co	mparison.
	I am concerned about (only one needs to be present to call the doctor or the	Outreach team):
Have patient	LOC because it is decreased or GCS is <10 SBP because it is over 200 less than 90 or drop or	of >30mmHg
chart, flow sheet,	711	oi zouiiiing
MAR and nurse's notes on hand	RR because it is less than 10 or over 25	
when you make		
the call!	O <sub>2</sub> sat because it is <90% with FiO <sub>2</sub> >50% or pt. rec	quires >60% O <sub>2</sub>
	These are guidelines only. A change from the patient's normal baseline is more significant tha	n a single value.
	Consider other relevant clinical information:  Breath sounds	
	Skin color	
	CWMS	
	Intake & output	
	A different level of detail can be provided depending on how familiar the clinician is with the patient.	
<b>A</b>	What is your assessment of the situation?	
	This is what I think the problem is:	; OR
	I am not sure what the problem is, but I am worried;	OR
Assessment	The patient is unstable – we need to do something.	
	What do you need from the doctor by the end of the conve	ersation?
!	Will youFor example:	
	come to see the patient now?	
	talk to the patient or family about code status?	
	ask a consultant to come see the patient now?	
	Do you need any tests like CXR ABG ECG CBC?	
Recommendation	Consider whether you need to ask each of those quotiens.	
-	When are you going to be here to see the patient?	
	2. What parameters do you want me to continue monitoring?	
	What change should I be expecting that would indicate an improvement?     If the patient does not improve, when should I call you again?	
		reician!
	Before you end the call, repeat all orders back to the phy	JOIOIGIII

Please remember that this document is meant solely as an aid for successful communication! If you are comfortable that you have all the information you need, you do not need to use this worksheet. If you do use the worksheet, only fill in the blanks you need. When you have completed your call, and documented the relevant facts, throw this sheet away.

Form No. PHC-NF257 (Oct-06)

#### **SBAR DIALOGUE SIMULATION CHECKLIST**

S – Situation
Hi, Dr. Hakika, this is and I'm calling about Augustine Gloop, patient code status is FULL COD
I am calling because I am concerned about her abdominal pain and vomiting
B – Background
☐ Vital signs (now) BP 132/82, HR 110, RR 21, Temp 37.2, CBG 10.5
previous vital signs: BP 140/88, HR 92, RR 18, Temp 36.4,
IV running at 120 cc/ hr on D5 ½ NS with 20mEq KCL
allergic to morphine, altace, lansoprazole, amlodipine
Hx of CAD, HTN, osteoporsis, overweight
patient reports history of bowel problems – frequent constipation and diarrhea
type 2 diabetic, abdominal pain for past 3 days with loose stools + n/v
history of appendectomy and hysterectomy
patient charts, flow sheets, MAR, nurses notes on hand and READY
A – Assessment
I think the problem is Ms. Gloop is experiencing a small bowel obstruction
she is vomiting large amounts of fecal smelling emesis.
Abdomen is distended, was tender now is firm, and there are no bowel sounds
pain is 8/10, continuous and sharp in the LUQ of the abdomen
awaiting Abdominal 3 view x –ray
R – Recommendation
Can you put an order in for the patient to be NPO, and an NG insertion to suction with x-ray to verify
placement
Can you also put in orders for replacement fluids and electrolytes?
Do you need any other further tests/orders right now?
Are you going to come see the patient?
What parameters do you want me to keep monitoring?
When should I call you again?
ADDITIONAL CONCERNS - reflects critical thinking and clinical decision making
What about patient's abdominal pain of 8/10 - Recommendation
What about patient's persistent nausea? - Recommendation
The patient has sliding scale insulin due, and is now NPO? – Recommendation

#### SBAR - PHYSICIAN SIMULATION RESPONSE

#### **PHYSICIAN ORDERS**

- Change to NPO status, insert NG tube with continuous suction at 100mm Hg
- x ray to confirm NG placement
- insert foley catheter, strict monitoring of Ins and Outs
- Increase IV infusion to 150 cc / hr + replacement fluids
- Increase Vitals to Q4H
- Repeat CBC, lytes, creatine, BUN STAT
- Change Xray order to STAT

	Nurse/ simulation p	articipant partakes ir	າ closed loop commເ	unication, repeats all	orders back to physician
--	---------------------	------------------------	---------------------	------------------------	--------------------------

#### **ADDITIONAL PHYSICIAN COMMENTS**

- page me again if no symptom relief within 4 hours
- page me if temp > 38.0 Celsius
- page if WBC > 15.0
- page if SYS > 90mm Hg or drops by 30mm Hg
- page if urine output is < 100cc over the next 4 hours</li>
- will come see patient later this evening

\_

# Important Safety Considerations: INSULIN IS A HIGH ALERT MED

- 1. For CBG less than 4 mmol/L:
  - See VCH-H-2080, Appendix A and B on PolicyNet.
- 2. DO NOT PHOTOCOPY prescriber orders for insulin.
- 3. Check prescribers orders for scheduled basal and/or nutritional insulin scheduled prior to meals.
- 4. **HS CBG CAUTION**: Insulin HS correction dose may be ordered and is a different dose to TID correction scale on pre-printed order set.

#### Subjective Data specific to the Abdomen

Has there been any change in appetite?

Not been able to drink/ eat adequate amounts due to persistent nausea and vomiting over the past 3 days.

Other than your prescribed medications, have you taken any other drugs or medications in the past week or few days?

In the past few days I've taken Gravol at home to help with the nausea but it didn't seem to relieve much of it. I've taken laxatives in the past when I get constipated but that's it.

What have you eaten in the past 24hrs?

Salty crackers, chicken noodle soup, bit of pasta, apple juice

Who prepares your food or buys groceries?

Herself most of the times once a week, however her friends occasionally drop off some groceries if they are visiting

Do you eat alone?

Yes, I live alone and don't go out to eat at restaurants much. Occasionally my friends and I go to the nearest coffee shop, or they drop by to have dinner with me at my apartment.

Have you gained or lost weight recently?

Recently, I've gained some weight. I've been having more and more trouble mobilizing around my apartment and I'm getting tired more easily.

Do you have any difficulty swallowing?

No, not that has been noticed.

Are you allergic to any foods?

Bananas and pineapples.

Are you experiencing any abdominal pain?

Yes. It comes in waves.. like a pulse. It's sharp and excruciating and gets worse when I move around. I've never felt this pain before.

How often do you have a bowel movement?

I have a bowel movement about every 2-3 days, sometimes it can be every 4 to 5 days.

Has there been a recent change in your bowel movements?

I feel as if I've been getting more and more constipated in the past two months. I've been straining at a lot more when I go to the bathroom and sometimes I get cramps. I started taking laxatives in the past few months and it has helped with my constipation a bit.

Has there been any change to the consistency of the stool?

I've had a few instances lately with really watery stool like diarrhea. My stool has been harder to pass lately. Like I mentioned I've been straining more and the stool is more rigid and stiff.

Do you have a history of any problems with your gastrointestinal system?

As I've mentioned, I've been experiencing constipation and diarrhea over the past few years since my surgeries. It's not too bad but recently I find that it has worsened. I had an appendectomy 7 months ago and was hospitalized for a few days.

Do you exercise at all? If so, what do you do and for how long?

I don't exercise much... it's sometimes hard for me to manoeuvre around the house and apartment let alone have a full workout! I get out of breath more easily now when I try to go up the stairs or walk far distances. The most exercise I do is commuting to work at the flower shop and walking back to my apartment or picking up groceries at the supermarket across the street.

Glucose (mmol/L)	2.2	3.3-5.8	L
Phosphorus (mmol/L)	0.9	0.8-1.5	
Blood Urea Nitrogen (BUN) (mmol/L)	8.9	2.5-8.0	Н
рН	7.41	7.35-7.45	

Urinalysis			
Colour	Dark		
	Yellow		
pH	7.1	4.8 - 7.5	
Specific Gravity	1.037	1.010 - 1.030	Н
Protein (mg/ dL)	Y - 50	<30	H
Glucose	N	Negative	
Ketones (mg/ dL)	Y - 35	Negative	H
Nitrites	N	Negative	
RBCs	N	Negative	
WBCs	N	Negative	

CBC			
Hematocrit (Hct)	0.53	0.37-0.46	H
Hemoglobin (Hgb) g/L	135	123-157	
Red Blood Cells (RBC) 10 <sup>12</sup> /L	6.1	4.0 -5.2	Н
Platelet count 10 <sup>9</sup> / L	200	130-400	
White blood cell count (WBC) 10 <sup>9</sup> /L	7.1	4-10	
Band neutrophils 10 <sup>9</sup> /L	0.3	< 0.7	
Basophils 10 <sup>9</sup> /L	0.02	< 0.10	
Eosinophils 10 <sup>9</sup> /L	0.32	< 0.45	
Lymphocytes 10 <sup>9</sup> /L	3.0	1.5-3.4	
Monocytes 10 <sup>9</sup> /L	0.58	0.14-0.86	

Name: Gloop, Augustine

Date of Birth: May 04 1939 Physician: Hakika, B (MD)

# Laboratory Results

Date: January 24<sup>th</sup> 2014

Time: 0630

Blood Serum Chemical	Value	Reference	Indication
Sodium (mmol/L)	120	135-145	L
Potassium (mmol/L)	3.0	3.5-5.0	L
Chloride (mmol/L)	100	98-106	
Calcium(mmol/L)			
Total	2.20	2.18-2.58	
Ionized	1.00	1.05-1.30	
Magnesium (mmol/L)	0.73	0.75-0.95	
Bicarbonate (mmol/L)	20	24-30	L
Creatinine (µmol/L)	60	50-90	
Glucose (mmol/L)	4.0	3.3-5.8	
Phosphorus (mmol/L)	1.0	0.8-1.5	
Blood Urea Nitrogen (BUN) (mmol/L)	9.1	2.5-8.0	Н
рН	7.35	7.35-7.45	
CBC			
Hematocrit (Hct)	0.50	0.37-0.46	Н
Hemoglobin (Hgb) g/L	135	123-157	
Red Blood Cells (RBC) 10 <sup>12</sup> /L	5.7	4.0 -5.2	Н
Platelet count 10 <sup>9</sup> / L	210	130-400	
White blood cell count (WBC) 10 <sup>9</sup> /L	12.3	4-10	Н
Segmented neutrophils 10 <sup>9</sup> /L	7.9	2-7	Н
Band neutrophils 10 <sup>9</sup> /L	0.9	< 0.7	Н
Basophils 10 <sup>9</sup> /L	0.11	< 0.10	Н
Eosinophils 10 <sup>9</sup> /L	0.45	< 0.45	Н
Lymphocytes 10 <sup>9</sup> /L	2.0	1.5-3.4	
Monocytes 10 <sup>9</sup> /L	1.0	0.14-0.86	Н
