PROVINCIAL BOARD OF HEALTH,

VICTORIA, B.C., July 31st, 1922.

To His Honour WALTER CAMERON NICHOL,

Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report of the Provincial Board of Health for the year ending June 30th, 1922.

J. D. MACLEAN,

Provincial Secretary.

REPORT *of the*
PROVINCIAL BOARD OF HEALTH.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., July 31st, 1922.

Doctor the Honourable J. D. MacLean,
Provincial Secretary, Victoria, B.C.

SIR,—I have the honour to submit the Twenty-sixth Annual Report of the Provincial Board of Health.

The year past has been an uneventful one. We have been singularly free from any epidemics and the work of the different departments has been continued along constructive lines. The development in the departments has been satisfactory, and I beg leave to give you a summary review of the work done and the outlook for the future. The division of our work is as follows:—

(1.) *Sanitary.*—The regular programme of the Department has been carried out in regard to the inspection of logging camps through the Provincial Police, and I am pleased to report during the past year that there have been fewer calls upon the Department for attention to neglect of the sanitary regulations.

I think emphasis should be laid upon the remarkable changes which have taken place during the past few years in regard to the conditions of the camps in British Columbia. Every year has shown a decided improvement. Employers are recognizing the fact that the Department insists upon the regulations being carried out, and the employees express satisfaction that their complaints receive prompt attention.

In addition to this, the Department is solicited for advice in connection with Municipal Boards of Health, and at all times our Chief Sanitary Inspector has given immediate attention to requests that have reached us.

Following your wishes, particular attention has been given during the past year to the summer camps. This is a growing problem with the increase in the number of places which are used during the season, but they have been visited regularly, literature distributed, and notices posted.

In this connection, I may say that the Department is alive to the growing necessity of control of motor traffic. The tourist traffic is increasing each year, and regulations are being drafted to enable supervision being maintained over the free camping-grounds which during the past year have begun to be established in the different parts of the Province along the tourist routes.

In this connection, we are working in conjunction with the Boards of the Pacific States in order that there may be a uniformity of regulations, and in order to deal with these international questions we have effected the organization of the Health Officers from California, Oregon, Washington, and British Columbia. There will be a uniformity brought about in regard to the handling of questions which are common to all of us, and which are becoming increasingly important on account of the increase in the travel.

We are also making arrangements, through the Department of Quarantine of the Federal Government, to bring about a uniform procedure in regard to the examination of ships, and an examination made at Williams Head will be acceptable to the United States authorities. At the present time, immediately succeeding the examination made by the Canadian authorities, the United States officer has to make a further examination and issue papers to enable the ship to visit American ports. The Canadian examination will be accepted if the present suggestions are carried out. The Department at Ottawa requested our co-operation in this, and we have been able to give assistance to them owing to the fact that we had already formed our Association of Pacific Coast Health Officers.

(2.) *Venereal.*—The work being carried on under the "Venereal Diseases Suppression Act" has made very satisfactory progress, and I am informed by the Federal Government that British Columbia is doing as much work as the clinics in Toronto and Montreal, and British Columbia, on the general work in connection with the education of the public, stands first.

We have been fortunate in securing the services of a number of leading citizens in the formation of a voluntary organization. Literature is being distributed continually, and the effect is noted in the fact that there is a great increase in the demands for the pamphlets which we issue. In fact, we have trouble in keeping pace with the demand. Meetings are being held, and all organizations, such as the Rotary Club, Kiwanis, Gyro, Church organizations, Church Synods, and all of the women's organizations, have been addressed, and committees formed in each of these to assist our voluntary association in the educational work.

The effect of all this is noticeable in the increased work in the clinics, an increase which has necessitated during the past year an increase of accommodation, principally in the Vancouver clinic. Twice we have had to rearrange the premises in order to accommodate the increasing number of patients. For the past twelve months there have been in the clinic 1,751 new cases and 28,413 treatments.

The facilities provided by the Government are sufficient for the present needs, and our endeavours now are directed along the line of follow-up work in order, if possible, to deal with the floating population, who are a continual source of infection.

The medical profession are becoming much more alive to the advantage of the work and with a better understanding on their part their co-operation is increasing.

The greatest need in this work is the provision of a detention home. The Act allows us to detain people infected, but we have no place to put them other than the gaols or the hospitals. We have utilized both on occasion, but we find it very difficult to deal with them unless we have a proper place. It will take time to bring about sufficient educated public opinion to enable us to ask for contributions, but we have the work well under way and within the next year we should see practical results towards the establishment of such an institution.

(3.) *Public-health Nursing.*—Under the assistance that we have received from yourself, we are able to report most satisfactory progress. The policy, as outlined by yourself, has been that this work must develop by local support through taxation, and in order to assist in this an amendment was passed to the "Public Schools Act" which practically places the appointment of the nurse on the same basis as the appointment of the teacher to the school staff. This, together with the privilege of grouping schools, makes the cost upon each School Board very small. The grant from the Government towards the salary is the same as that to the teacher.

Where we have placed nurses we have assisted financially until such time as the people thoroughly understand the work, and this was followed up by voluntarily placing the work on the taxes and doing away with dependence on voluntary contributions.

The Public Health Course in the University is training nurses. With the two classes that have graduated and the sixteen in the present class, they will have trained fifty-six nurses, all of whom have secured positions with the Government, the Red Cross, the Victorian Order, and a few have secured positions outside of the Province.

The demand for nurses is increasing and we have requests before us at the present time for nurses which will be filled as soon as the organization in the districts is completed.

In this connection the Women's Institutes have been in the forefront of the work, and through the officials in the Agricultural Department their co-operation has been systematized.

There are twelve nurses directly under the Provincial Board in the field and three more points ready for a nurse. In addition to which the Red Cross has Public Health Nurses, all of whose qualifications have been accepted by the Provincial Board. They have seven nurses in the field.

The Department has provided for these nurses all the literature necessary in their educational campaign, and their school-work, supplemented by this literature, has been remarkably successful. Meetings have been held and addresses given by officials of the Department, and these have been found to be particularly helpful in explaining the policy of the Government and the health-work in general.

The best indication of the evidences of awakening of public opinion in regard to this work is shown by the great increase in the work of the Department, and our work has been directed along the lines of stimulating this awakening, recognizing the fact that the enforcement of the laws can only be carried out when it is backed by intelligent public opinion.

The best way to obtain the backing of public opinion is to demonstrate by work actually done the benefits that can be derived, and I cannot do better than give a synopsis of the work as is being carried on in the Saanich Health Centre.

Saanich War Memorial Health Centre.

Arrival of some of the babies.

The account given below is applicable also to the Health Centre at Duncan, and in a lesser way in regard to some details is being carried out by all of our Public Health Nurses.

Work being directed from the Saanich Health Centre.

Well-baby Clinics.—Two each month; 148 babies registered to date.

School-work.—Fifteen schools; fifty-four class-rooms; approximately 2,000 children. Individual class-room inspection once each month, except in case of communicable disease appearing, in which case the nurse makes a daily examination of the pupils until the danger of an outbreak is passed. The teachers are instructed in observing signs of symptoms and reporting to the Health Centre.

Pupils are weighed *every* month and measured *once* in the school-year by the nurse. Subsequent months the children are encouraged to weigh themselves and record the result, under the supervision of the nurse. Charts are placed in every class-room for this purpose.

After each inspection the nurse gives a "health" talk to the class upon such matters as personal cleanliness, care of the teeth, etc. The talks are made suitable to the grade.

Little Mothers' League Classes.—A definite course on infant hygiene, which includes the proper dressing and feeding of babe, with practice on a baby doll, covers a period of twelve weeks, ending in an examination, with badge and certificate issued by the Provincial Board of Health for girls between ages of 10 and 14 years.

Attractive Health Posters are being placed in every class-room. Children are encouraged to make health posters themselves about vegetables, fruit, teeth, sunshine, etc.

Dental Work.—Appointments made for a certain number of school-children five days of each week. The dentist works at the Centre three hours, from 9 a.m. to 12; in this way twenty-five pupils, approximately, are attended weekly.

Tonsil Clinics.—The last Friday of each month we aim at having at least five tonsil operations done. The children are put to bed and cared for, and remain from six to thirty-six hours, until quite recovered.

Chest Clinics.—Once each month all suspects are encouraged to attend, and, if considered necessary, supervision is maintained at intervals by visiting the homes.

Social Service.—A limited amount of social-service work is done.

Infant Welfare.—All babies are followed up "by the nurse who has attended the confinement." We aim at watching these children all through the pre-school period.

Home-nursing and Hygiene.—These lectures are conducted through all the fall and winter months. Eleven lectures given monthly; three different classes being held on the same subject, covering a period of twelve weeks, with examination and certificate issued by the Provincial Board of Health.

Addresses.—These are given as part of every month's programme on the work of the Health Centre, the V.O.N., baby welfare, public health, and other kindred subjects. The people choose the subject they are most interested in.

District.—The district work includes maternity-work and all nursing which is not communicable, also a certain amount of educational work.

At the Health Centre are six beds. These are utilized for a certain type of patient, such as malnutrition, rickets, etc.

At the present time two patients are being nursed in the Centre; one a man who sustained a fractured tibia and fibula, the other a child who sustained a fractured jaw. Both accidents happened in the neighbourhood of the Centre.

Extension of the Work.—We are considering organizing a prenatal clinic and also an eye and ear clinic. The difficulty which presents itself, *a very real one*, is the transportation. The nursing staff has too much jitney service to perform at the present time, and with the work growing as it is with such surprising rapidity, it might be well to consider the question of transportation absolutely as a separate service and not include it in the nurses' programme. Otherwise the possibilities of extending the work, which are almost limitless as I see the situation at present, will be much retarded. An increase of staff is also a question which requires very serious consideration, with an additional automobile. The two at present in use are not adequate to our present needs, and will certainly not meet our future work and needs if a proper public-health programme is to be carried out.

(4.) *Laboratories.*—Since the adoption of your policy in regard to carrying out public-health work in the laboratories of the Vancouver General Hospital and the Jubilee Hospital, we find that the medical profession are depending on these facilities more and more, and work which is free in regard to health matters is increasing very markedly, and not only the profession but the general public know that the services furnished free by the Government are available.

In connection with the free work, the vaccines and antitoxins are sent out on request, and it is gratifying to note that, although there was such a decrease in the number of cases of smallpox, 64 cases reported this year as against 137 last year, yet there were requests for 2,665 points of smallpox vaccine.

There were also 240 doses of typhoid vaccine sent out and 817,000 units diphtheria antitoxin, as well as 2,500 units of tetanus serum; all distributed free.

(5.) *Child Hygiene.*—Following the formation at Ottawa of a National Council of Child Hygiene, the work is assuming Dominion-wide proportions. British Columbia was first in the line to organize local councils, and we have, especially with the Women's Institutes, Child Hygiene Councils throughout the Province. Conferences are held and programmes are provided by the Department.

The Dominion Council has adopted the scheme used in British Columbia, and will form a basis of a programme to be submitted to all of the Provinces.

I may say that the infantile deaths under 1 year of age in Vancouver and Victoria are the lowest of any cities in the Dominion.

The advance made in our work has been very practical, and while it has not been spectacular, yet a strict adherence to the policies approved by yourself and devoting efforts to the education of the public has brought about splendid results and the expansion of the work is continuing. The advances from year to year are substantial.

For the coming year our plans are intended to develop the work of the different departments as outlined in the beginning of the report.

There might be added to these the plans which you yourself have in regard to the tuberculosis-work. Our idea is to continue the campaign of public education, emphasizing this in every way through publications and through holding meetings.

We could intensify this work by an enlargement of the staff, but I feel that the plan that we have followed heretofore is satisfactory and is accomplishing results without the added expense of too many departments. These departments are so interlocked that with proper guidance from the Department we can carry on.

A table of infectious diseases reported during the year is incorporated in this report, in addition to which epidemics were reported as follows:—

Chickenpox—Chilliwack, Oak Bay, Port Coquitlam, Sandon District, and Powell River.

Diphtheria—Salmo and Gabriola Island.

Influenza—Chilliwack, Duncan, Field, Islands District, Mission, Nakusp, Port Coquitlam, Sidney, Williams Lake, Woodfibre, Victoria, Summerland, Ashcroft, Creston, Cumberland, Renata, and Windermere District.

Mumps—Alberni District, Ashcroft District, Chilliwack, Duncan, Hazelton District, Nelson, Oak Bay, Penticton, Prince George, Saanich, Sandon District, Victoria, and Port Alice.

Scarlet fever—Mission District and Nelson.

Typhoid fever—Trail District.

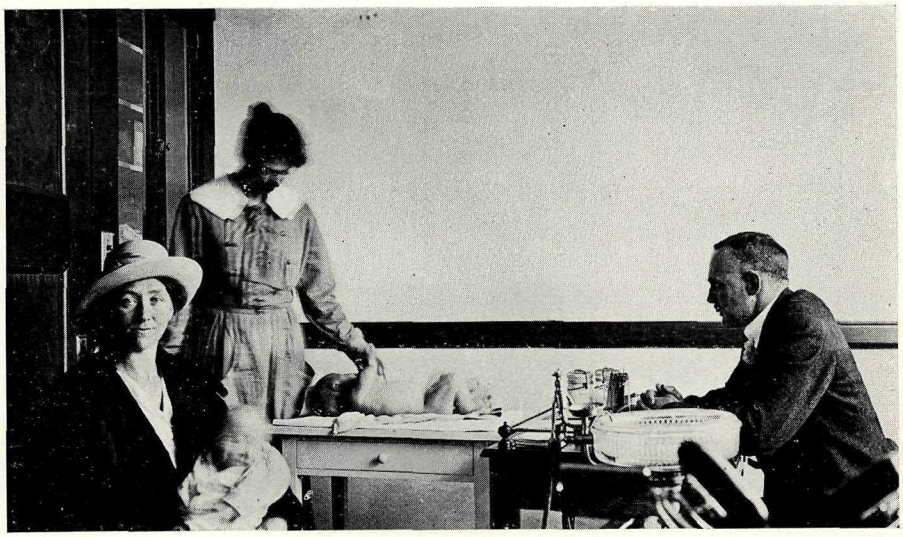
Whooping-cough—Ashcroft District, Greenwood, Nakusp, Penticton, Trail District, Edgewood, Cumberland and District.

Cemeteries approved: Burton, Sooke, Hullcar, Campbell River, Powell River, Greater Victoria, and East Wellington (Chinese).

Water-supplies approved: Oliver, Coldstream (temporary), Prince Rupert Extension, White Rock, West Summerland Extension, and Kamloops Extension.

Sewerage systems approved: Ocean Falls, North Vancouver Extension, Nelson Extension (Fairview), and Kamloops Extension.

The report of the Vital Statistics Department is much curtailed this year owing to the arrangement with the Census Department of the Federal Government at Ottawa. All certificates of births, deaths, and marriages are forwarded to that Department, and, beginning with this year, these returns will be published amongst the Vital Statistics returns for the Dominion as a whole. This is referred to in the small Vital Statistics Report which we include.



Doctor's examination.

Ready to depart.

Probably the greatest advance that has been made is manifested in the increased interest taken by voluntary organizations in health-work, the Women's Institutes being particularly active, and much of the progress that we have made has been due to their active co-operation.

The work of the Department is onerous and requires unceasing attention on the part of the members of the staff. This attention has been given without stint, and I feel very much indebted to them for their interest in the work and the material assistance that they have given.

At all times the encouragement which we have received from you, as Minister of the Department, has been stimulating and much appreciated.

I have the honour to be,
Sir,
Your obedient servant,
H. E. YOUNG,
Provincial Officer of Health.

GENERAL REPORTS.

SANITARY INSPECTION.

SANITARY INSPECTOR'S OFFICE,
VICTORIA, B.C., July 31st, 1922.

H. E. Young, M.D., C.M., LL.D.,
Provincial Officer of Health, Victoria, B.C.

SIR,—I have the honour to submit for your consideration my Twelfth Annual Report on Sanitary and Quarantine Work for the Provincial Board of Health.

During the past year general sanitary conditions throughout British Columbia have been highly satisfactory. This applies especially to the unincorporated territory. Increasing industrial development has naturally increased the work of sanitary supervision, but the work is made much easier than formerly owing to a greater spirit of co-operation manifested towards our officials by employers and employees alike. Years of patient propaganda for improved sanitary conditions are to-day reflected in the well-arranged sanitary measures provided in 95 per cent. of our industrial plants and camps. Another fact worth noting in that connection, which might be simply coincident, is that British Columbia has less industrial strife than any part of the civilized world.

The larger portion of our industrial camps are located along the 6,000-mile coastal line of British Columbia, and these places, numbering many hundreds, are periodically inspected through the mediumship of our quarantine launch. The sting of this work, which is oftentimes fraught with danger and long hours of duty, is removed by the genial welcome and co-operative spirit exhibited towards your officials by both master and man, and any suggestions for sanitary betterment are welcomed and heeded.

A serious outbreak of typhoid occurred during last summer at a northern coastal camp. After exhaustive tests and surveys the cause was found to be an unsuspected carrier temporarily visiting the camp. The outbreak was stamped out and the convalescent and recovered patients instructed along prophylactic lines. The sanitary measures are being strictly watched at this camp, where several typhoid-recovered employees are yet domiciled. The superintendent, who was one of the afflicted, is lending every effort to prevent a repetition and assisting the Department in its bacteriological observations. Fortunately this camp is quite isolated and can only be reached by launch.

SANITATION IN OUTLYING DISTRICTS.

The growing prosperity and education of our people has been marked by an increased desire on the part of our country citizens to install modern sanitary conveniences, such as pneumatic water-pressure systems and septic sewage-disposal plants for their homes. This commendable move means more to the future than appears on the surface. The coming of such sanitary conveniences, coupled with good roads and radio appliances, will be real factors in the "back to the farm" movement.

This Department has spent considerable time in advising applicants for information along sanitary lines, more especially septic-tank systems. Through the co-operation of the Public Works Department we have been able to lend blue-prints and plans suitable for various conditions of soil and location. In this manner our people are assisted in their desire for modern sewage-disposal at a minimum cost. Owing to the variable character of location, surface and subsoil, it is impossible to have a standard plan to fill every need. We are keeping in touch with the various types now in use in order to be in a position to further advise as to requirements based upon actual observation of existing types.

The present tendency is to neglect a very important factor for complete success—namely, the proper disposal of the effluent from the septic chamber; and whilst this is often clear and odourless when discharging, unless thoroughly distributed by means of an ample soak-away pit or sub-irrigation plan, it is sure to become an offensive nuisance and a decided menace during fly season.

FOOD CANNING AND PRESERVING ESTABLISHMENTS.

The food-canning industries of British Columbia are almost confined to two articles, the world-renowned sockeye salmon and Okanagan fruit. In regard to the former, the fish are delivered to the canneries by the fish-boats direct from the fishing-grounds in fresh and firm condition and are immediately put through the canning process, which consists of gutting and cleaning in a most thorough way with modern and ingenious machinery in an almost human manner. Every care is observed to keep the machinery scrupulously clean and free of rust. Cans are of the modern, sanitary, solderless type. From the time the salmon leave the sea to the time it is cooked and sealed ready for shipment it is scarcely handled by human hands and the probability of infection or contamination is quite remote.

It is only in the disposal of the refuse that we have to find fault, and even in that respect the number of canneries defaulting do so under extenuating circumstances, and their number is negligible. Located as they are in isolated places on the sea-front, where shoals of dogfish await the opportunity of devouring all refuse thrown from the cannery dock.

Our regulations demand that all refuse from canneries be conveyed to an incinerator or towed out to sea beyond the 3-mile limit, and whilst your officers are ever ready to assume their responsibilities in enforcing regulations, there are times when a prosecution would be persecution, and the allowable discretion is based on circumstances and the proper safeguarding of the public health.

FRUIT AND VEGETABLE CANNERIES.

The industry has reached the stage predicted by this branch of your Department. At the time, regulations governing food preserving, canning, storage, and packing establishments were adopted. These regulations have been carried out. The following letter asking for co-operation was sent to all firms:—

To the Managers of Fruit Canneries and Packing-houses:

SIR,—I beg to advise that regulations governing the operation of all establishments where food is prepared or handled for human consumption has been issued by this Department. A copy is herewith enclosed for your careful perusal. It is not the intention of this Department to handicap you in any manner, but rather to help promote a growing and valuable industry along lines which will place its products before the world as having come from establishments where cleanliness and strict sanitary conditions are insisted upon. I would remind you that such conditions in our salmon-canneries have placed the British Columbia salmon in the enviable position it commands to-day throughout the markets of the world. The Okanagan Valley, with unlimited and wonderful possibilities, will be promoted or throttled according to your manner of co-operation along the lines demanded by our regulations. It is gratifying to learn from our Inspector, Mr. DeGrey, that 95 per cent. of the canners and packers are heartily co-operating and in sympathy with our efforts, and we hope this support will be unanimous without our having to insist upon the observance of the regulations.

All municipalities have authority to enforce these regulations. Furthermore, every Provincial Constable is a Sanitary Officer with instructions to inspect such establishments frequently.

Anticipating your hearty co-operation,

PROVINCIAL BOARD OF HEALTH.

To-day the sunny Okanagan has developed into a fruit-hive of health and industry and its limits are not by any means in sight.

The fruit canning and packing establishments are inspected by Provincial and municipal officers and cleanliness is the watchword at every establishment. It is gratifying to know that the majority of the larger establishments are in the hands of men locally known as "fussy for cleanliness."

SUMMER RESORTS.

This phase of our work is one which calls for much resourcefulness. Nearly all of these summer resorts are in unorganized territory and in many cases remote from any supervising official. They are visited through the aid of our departmental launch, inspected and posted with the departmental warning notices of a sanitary and prophylactic nature.

Our observations show that in the selection of camping resorts insufficient attention is given to an adequate supply of drinking-water and the care and location of latrines.

Propaganda through the agency of our posters and booklets seem to have a far-reaching and inexpensive effect, and the results already noticeable seem to justify the saying that "The common-sense of the people is the chief reliance of successful health-work."

WATERSHED-PROTECTION.

This branch of our work is one of vital importance, especially considering that nearly one-half of our population is dependent upon our vigilance on the Burrard Inlet watershed.

The writer makes frequent visits of inspection to Capilano, Lynn Valley, and Seymour Creek watersheds, and is constantly in telephonic touch for any untoward emergency or required drastic action. The co-operation of this Department with the Health Departments of the cities affected ensures the people's drinking-water free from contamination other than that of flood or freshet.

NUISANCES.

This branch of your service has been called upon to take action for the abatement of nuisances from slaughter-houses, chicken-farms, hog and cattle pastures, oil, chemical, and fertilizer plants, sewage foreshore and drains in various parts of British Columbia.

In some alleged nuisance cases the cause presents a serious problem, sometimes affecting the industrial life of a community. It is then that an appeal to reason has to be made to avoid persecution and loss, because a nuisance is not necessarily a health menace. However, in the majority of cases we have successfully had the nuisances abated.

SUMMARY.

The number of inspection visits to logging camps during the past year approximates 350; to mining camps, 30; to canneries, 100; other industrial plants, 50; summer resorts, 25; nuisances, 15; cemeteries, 3; territory embraced all British Columbia. The majority of logging camps are located on the Coast between the 49th and 51st parallel, thus necessitating much water transportation.

Before concluding, I beg to remind you of the very efficient service rendered to this branch of the service by the Provincial Police officers all over the Province. To carry on our constantly increasing work without their services as Sanitary Officers would be very difficult.

I have, etc.,

FRANK DEGREY,

Chief Sanitary Inspector.

MEDICAL INSPECTION OF SCHOOLS.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., July 31st, 1922.

Doctor the Honourable J. D. MacLean,
Provincial Secretary, Victoria, B.C.

SIR,—I beg leave to submit the Eleventh Annual Report of the Medical Inspection of Schools for the Province of British Columbia.

The tables appended give a full description of the work being done by the Medical Inspectors, and we note that the advent of the Public Health Nurses, with the follow-up work which we have been hoping for, is now thoroughly under way.

Our correspondence reveals that the nurses' influence is awakening the public attention, and the parents are more alive to the necessity of correcting the defects which the Medical Inspectors' reports show as existing in the children.

The University of British Columbia is continuing the Public Health Course for nurses, and there have been, including the present class of sixteen, fifty-six nurses trained, all of whom have obtained positions. That their worth is recognized by the voluntary organizations, such as the Women's Institutes and the Parent-Teachers' Associations, is shown in the increased requests that we are receiving for Public Health Nursing Service, and also from the requests that we are receiving that the Public Health Nursing Service be substituted for that of the Medical Inspectors. The Department is not in accord with these requests, but we are endeavouring to relieve the medical men of a great deal of the routine work, and the present plan is to have the medical men's services retained as consultants. The medical man will make a thorough examination of the receiving class; the nurse will carry on the routine work and have the doctor to act as her consultant for any cases which she considers necessary should be sent to him. In this way we are able to keep the expenses within the present bounds, or at least maintain the services of both the doctor and the nurse at a very small increase.

What is particularly gratifying is the preventive work carried on by the nurses. Classes are formed amongst the pupils, literature supplied by the Department, and school chores provided for. By "school chores" we mean giving certain definite duties for the children to follow out in regard to their personal hygiene. The idea has been very acceptable to the children, and the spirit of competition engenders strict attention to their carrying-out of the "health habits" that are prescribed by the nurse.

The most striking feature in respect to this work is the influence that it has on the homes. The children are insisting upon the parents permitting and co-operating with them in carrying out the work.

Many commendatory letters have been received from parents, and the fact that we have managed to secure the interest of the children has done a great deal in popularizing health-work in the schools.

Naturally the growth of the population provided increased material for examination from year to year. New schools are being opened, but we are able with our organization to meet these increases.

While criticism has been offered in regard to some of the medical men, and no doubt justly so in some cases, yet the great majority of the medical men are appreciating more and more the benefits that the children are deriving, and also learning that the public are determined that the rising generation shall receive all the benefits within their power.

The people are beginning to appreciate the fact that the millions of dollars spent in education is spent as an investment. The theory that an educated citizen is the best citizen is universally accepted, and the taxpayers have begun to realize that it is poor business to spend money without stint in providing for the mental education of a generation that is more than one-third physically defective. The child who is physically defective will never grow up into a condition that will enable him to be an asset to the state.

I am submitting a detailed report of the schools examined.

I have, etc.,
H. E. YOUNG,
Provincial Officer of Health.

SCHOOLS INSPECTED.

Medical Inspectors: 151.
Reports from Medical Inspectors: 131.

HIGH SCHOOLS.

High schools. 1920–21, 52: Reported, 30; not reported, 22. 1921–22, 52: Reported, 27; not reported, 25.
Pupils inspected: 1920–21, 3,049; 1921–22, 3,908, an increase of 859.

GRADED CITY SCHOOLS.

Cities. 1920–21, 35: Reported, 25; not reported, 10. 1921–22, 35: Reported, 26; not reported, 9.
Pupils inspected: 1920–21, 32,392; 1921–22, 30,218, a decrease of 2,174.

RURAL MUNICIPALITY SCHOOLS.

Municipalities. 1920-21, 27: Reported, 21; not reported, 6. 1921–22, 25: Reported, 22; not reported, 3.
Pupils inspected: 1920–21, 18,159; 1921–22, 21,617, an incerase of 3,458.

RURAL AND ASSISTED SCHOOLS.

Schools inspected: 1920–21, 438, at a cost of $9,574.25; 1921–22, 506, at a cost of $11,364.80.
Schools not inspected: 1920-21, 169; 1921–22, 152.
Pupils inspected: 1920–21, 11,231; 1921–22, 13,395, an increase of 2,164.
Cost of inspection per pupil: 1920–21, 85 cents; 1921–22, 84 cents.
Percentage of defects: 1920–21, 93.98; 1921–22, 94.01, an increase of 0.03.

REGISTRAR'S REPORT UNDER THE VITAL STATISTICS ACT.

VICTORIA, B.C., August 31st, 1922.

H. E. Young, Esq., M.D., C.M., LL.D.,
Secretary, Provincial Board of Health, Victoria, B.C.

SIR,—I have the honour to submit the Fiftieth Report of Vital Statistics for the six months ending December 31st, 1921.

The publication of this report for a period covering only the six months ending December 31st, 1921, has been considered advisable that a reversion may be made to the former practice of issuing reports by years January 1st to December 31st, instead of by years July 1st to June 30th, as has been the case since 1918.

The issue of this report will make it possible to rearrange the statistics given in the reports for the six months 1918, 1918–19, 1919–20, 1920–21, so that figures will be available by years 1918, 1919, 1920, and 1921.

It is the intention of the Dominion Bureau of Statistics to issue a Report of Vital Statistics for the year 1921 for the Dominion of Canada by Provinces, cities, and larger towns. As full particulars will be included in their report regarding vital statistics for British Columbia, this report will be considerably curtailed by the omission of certain tables which have been included in previous reports. It may be stated, however, that all these tables will be kept on file at Victoria and will at all times be at the service of the public.

Inasmuch as this is the Fiftieth Report of Vital Statistics, some reference to the figures of the first report issued in the Province may be of interest. The period covered by the first report was the last four months of 1872 and the year 1873. The Province at that time was divided into nine registration districts and a District Registrar was appointed to each district. The number of District Registrars at the present time is sixty.

The total number of registrations for the last four months of 1872 and the year 1873 were as follows: Births, 214; deaths, 149; marriages, 103. For the year 1921 the figures read: Births, 11,644; deaths, 4,489; marriages, 3,994.

The census of 1871 gave British Columbia a population of 36,247, while that of 1921 gave the Province a population of 523,323.

The total number of registrations from the time the Act went into force to June 30th, 1922, were as follows: Births, 128,681; deaths, 63,748; marriages, 58,133; a total of 250,562 registrations.

All registrations received at this office since the year 1872 are arranged and indexed in alphabetical order, assigned to their proper places and properly bound in volumes. At the present time the number of volumes is as follows: Births, 404; deaths, 294; marriages, 239.

POPULATION.

The publication of the official figures for the Dominion census of 1921 makes it apparent that our estimates of the population of the Province for the past two or three years have been somewhat too high. The 1921 census assigns British Columbia a population of 523,323, whereas for the years 1919–20 and 1920–21 we based our rates and percentages on an estimated population of 555,536 and 575,000 respectively.

In view of the above, it has been considered advisable to revise our estimates of the population in the tables for these years so as to afford a truer basis of comparison with the rates and percentages for the six months ending December 31st, 1921.

In determining the population for these periods, 51,647, the number by which our estimate exceeded the census, has been deducted from the years 1919-20 and 1920–21, and for the six months ending December 31st, 1921, 2,365, the natural increase from July to December, 1921, has been added to the census figures. This will give the following populations for the respective years: 503,889; 523,353; 525,718.

As at the time of writing this report we have been unable to secure figures from the Census Department as to the number of Chinese, Japanese, Indian, and East Indian in the Province, no change has been made in our previous estimate of these races.

REGISTRATIONS (NOT INCLUDING INDIANS).

The following table shows the total registrations for the years 1919–20, 1920–21, and the six months ending December 31st, 1921; also the rates per thousand of population for births, deaths, and marriages:—

	1919-20. Population, 478,240.	1920-21. Population, 497,553.	July 1 to Dec. 31, 1921. Population, 499,918.
Registered births	10,002..... 20.91	11,532.....23.17	5,823..... 11.64
Births (actual)	9,308.....19.46	10,687.....21.47	5,454..... 10.90
Registered deaths	4,888.....10.22	4,564..... 9.17	2,089..... 4.17
Registered deaths less still-born	4,618..... 9.65	4,267..... 8.57	1,977..... 3.95
Registered Marriages	4,650 .... 9.72	4,514..... 9.07	2,053..... 4.10

REGISTRATIONS FOR PROVINCE (NOT INCLUDING INDIANS).

The following table shows the number of registrations in the various divisions of the Province for the years 1919–20, 1920–21, and the six months ending December 31st, 1921:—

Divisions and Groups of Divisions.	BIRTHS.			DEATHS.			MARRIAGES.		
	1919-20.	1920-21.	July 1st to Dec. 31st, 1921.	1919-20.	1920-21.	July 1st to Dec. 31st, 1921.	1919-20.	1920-21.	July 1st to Dec. 31st, 1921.
Victoria	1,722	1,698	731	728	687	322	755	643	301
Nanaimo	630	625	378	278	257	117	177	174	89
Vancouver	3,916	4,627	2,380	2,096	1,944	890	2,371	2,283	983
New Westminster	1,145	1,385	678	569	550	254	386	443	190
Ashcroft	192	312	159	95	96	47	63	69	47
Fairview	1,001	1,204	627	515	448	192	427	419	217
Alberni	499	560	315	194	202	85	125	164	81
Beaton	897	1,121	555	413	380	182	346	319	145
Totals	10,002	11,532	5,823	4,888	4,564	2,089	4,650	4,514	2,053

BIRTHS.

In connection with births, it may be noted that the rate per 1,000 of population for birth registrations for the six months ending December 31st, 1921, and actual births shows a slight tendency to increase as compared with 1920–21.

Of a total of 5,823 birth registrations, 4,226, or 72.57 per cent., show that both parents are of British origin or nationality; 1,766 registrations give both parents as English, 570 as Scotch, 174 as Irish, 9 as Welsh, and 156 as other British.

The number of Japanese registrations of births for the six months ending December 31st, 1921, was 348, and the number of Chinese 148.

The number of births (actual) for the six months ending December 31st, 1921, was 5,454, as against 10,687 in the year 1920–21, and the number of delayed registrations 369, as against 845 for the year 1920–21.

The natural increase (excess of births over deaths) for the six months ending December 31st, 1921, was 2,365, as against 6,123 for the year 1920–21.

DEATHS.

The rate per 1,000 of population for death registrations shows a slight decrease as compared with the year 1920–21.

In regard to deaths, it may be remarked that the number of deaths of children under 1 year old has decreased very considerably, and a like decrease is noticeable under the heading of "Diseases attributed to Early Infancy."

For the six months ending December 31st, 1921, the number of deaths of children under 1 year of age (exclusive of still-born) was 267, or 13.50 per cent. of all deaths for that period, as against 651, or 14.73 per cent. in the year 1920–21.

For the six months ending December 31st, 1921, 239 deaths (including still-born), or 11.44 per cent. of all deaths, were classified under "Early Infancy," as against 640, or 14.02 per cent., in the year 1920-21.

Of the total number of decedents (still-births excluded), 1,391, or 70.35 per cent., are described as being of British origin; 535 males and 327 females are given as married, 505 males and 264 females as single, 110 males and 160 females as widowed, 3 males and 2 females as divorced, and the balance not given.

MARRIAGES.

The number of marriages shows a tendency to decrease, being 2,053, as against 4,514 in the year 1920–21 and 4,650 in the year 1919–20.

CLASSIFIED LIST OF DEATHS.

The following is a classified list of deaths which have occurred in British Columbia for the years 1916 to December 31st, 1921. This table does not include Indians.

	1916.	1917.	1918. (6 Mos.).	1918-19.	1919-20.	1920-21.	July 1 to Dec. 31, 1921.

11. Diseases of early infancy	438	405	186	447	591	640	239
12. Old age	80	54	37	76	90	95	35
13. Affections produced by external causes	473	455	225	414	543	503	264
14. Ill-defined, including executions	68	50	23	85	47	35	15
Totals	3,887	3,896	2,046	6,696	4,888	4,564	2,089

The results of the foregoing table have been segregated for purposes of comparison, and each division has been charged with what it is responsible for in the six months ending December 31st, 1921. No. 1, "General Diseases," included returns for "tuberculosis," "cancer," and "influenza." These three items are responsible for 374 deaths, or 18.91 per cent. of all deaths.

ALLOTMENT OF ALL CAUSES OF DEATH TO EACH MINING DIVISION, JULY TO DECEMBER, 1921.

Mining Division.	General Diseases.	Nervous System.	Circulatory System.	Respiratory System.	Digestive System.	Non-venereal, Genito-urinary System.	Puerperal State.	Skin and Cellular Tissue.	Bones and Organs of Locomotion.	Malformations.	Early Infancy.	Still-born.	Old Age.	External Causes.	Ill-defined.	Total.

The following table of diseases (exclusive of Indian returns) has been compiled from returns of the whole Province from the year 1903 to December 31st, 1921. This table, like the preceding one, has been segregated, and each division shows its liability to or immunity from the diseases contained in the list for the six months ending December 31st, 1921.

Disease.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918 (6 Mos.).	1918-19.	1919-20.	1920-21.	July 1 to Dec. 31, 1921.	Total.

CANCER.

The number of deaths from cancer for the six months ending December 31st, 1921, was 187, or 9.45 per cent. of all deaths (exclusive of still-born), as against 342, or 8.01 per cent., in the year 1920–21. There were 3 deaths from cancer among the Indians (not included in the above).

TUBERCULOSIS.

The number of deaths from tuberculosis for the six months ending December 31st, 1921, was 178, or 9 per cent. of all deaths (exclusive of still-born), as against 421, or 9.86 per cent., in the year 1920–21. The above does not include 53 deaths from tuberculosis among the Indians.

The following table shows the assignment of deaths from tuberculosis to the various races:—

Race.	Population.	Deaths.	Per Cent. of Deaths from Tuberculosis.	July 1st to Dec. 31st, 1921. Rate per 1,000 of Population.	1920-21. Rate per 1,000 of Population.
Whites	467,551	137	59.30	0.29	0.75
Indians (aborigines)	25,800	53	22.94	2.05	3.60
Chinese	14,000	23	9.95	1.66	3.71
Japanese	16,867	16	6.92	0.94	1.30
East Indians	1,500	2	0.86	1.33	0.66
Totals	525,718	231	99.97	....	....

The following information is given as a comparative statement *re* the ages of decedents for the years 1919–20, 1920–21, and the six months ending December 31st, 1921:—

Age.	1919-20.	1920-21.	July 1st to Dec. 31st, 1921.	Per Cent. of Deaths, July to Dec., 1921
Under 1 year	623	651	267	13.50
1 to 2 years	77	61	27	1.36
2 to 5 years	124	96	48	2.42
5 to 10 years	106	105	52	2.63
10 to 20 years	213	167	83	4.19
20 to 30 years	423	319	122	6.17
30 to 40 years	650	470	232	11.73
40 to 50 years	621	581	254	12.84
50 to 60 years	550	562	292	14.76
60 to 70 years	509	549	273	13.80
70 to 80 years	427	430	194	9.81
80 to 90 years	214	203	98	4.96
90 years and upwards	32	43	22	1.11
Age not given	49	30	13	0.65
Totals	4,618	4,419	1,977	99.93

In the above table still-born are not included with deaths under 1 year. In 1919–20 the number of still-births was 270; in 1920–21, 297; and in the six months ending December 31st, 1921, 112.

REGISTRATION OF INDIANS.

The following shows the number of registrations received at this office for the six months ending December 31st, 1921: Births, 196; deaths, 174 (4 still-born included); marriages, 32.

"ADOPTION ACT."

Fifty-one certificates of adoption were received and filed during the six months ending December 31st, 1921.

The following are the cash receipts for the six months ending December 31st, 1921: Vital statistics, $866.75; marriage licences, $120.

The number of searches made *re* vital statistics was 908 and the number of certificates issued was 1,098. The number of letters received and answered was 2,307.

It would be ungracious to conclude this report without tendering our thanks to all officers connected with this branch of the Health Department for their unfailing courtesy and promptness on all occasions.

I have the honour to be,
Sir,
Your obedient servant,
HERBERT B. FRENCH,
Deputy Registrar of Births, Deaths, and Marriages.
