PROVINCIAL BOARD OF HEALTH

VITAL STATISTICS

OF THE PROVINCE OF BRITISH COLUMBIA

SEVENTY-FOURTH REPORT

FOR THE YEAR

1945

VICTORIA, B.C.:
Printed by DON MCDIARMID, Printer to the King's Most Excellent Majesty.
1947.

VICTORIA, B.C., June 2nd, 1947.

To His Honour CHARLES A. BANKS,
Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report on Vital Statistics in the Province of British Columbia for the year 1945.

G. S. PEARSON,
Minister of Health and Welfare.

DEPARTMENT OF HEALTH AND WELFARE,
VICTORIA, B.C., June 2nd, 1947.

The Honourable G. S. Pearson,
Minister of Health and Welfare, Victoria, B.C.

SIR,—I have the honour to submit the Seventy-fourth Report on Vital Statistics in the Province of British Columbia.

I have the honour to be,
Sir,
Your obedient servant,

G. F. AMYOT,
Deputy Minister of Health and
Provincial Health Officer.

DIVISION OF VITAL STATISTICS,
VICTORIA, B.C., June 2nd, 1947.

G. F. Amyot, Esq., M.D., D.P.H.,
Deputy Minister of Health, Victoria, B.C.

SIR,—I have the honour to submit the Seventy-fourth Report on Vital Statistics in the Province of British Columbia for the year ended December 31st, 1945.

I have the honour to be,
Sir,
Your obedient servant,

J. D. B. SCOTT,
Director of Vital Statistics.

Vital Statistics Report, 1945.

INTRODUCTION.

This is the Seventy-fourth Report on the Vital Statistics of British Columbia, and covers the calendar year January 1st to December 31st, 1945.

For facility of reference the report is divided into three sections. The first section is a summary section of vital statistics data, showing not only pertinent facts from the current year's data but also time trends over a period of years. Where possible, tables are accompanied by graphs, to afford the reader a more ready appreciation of the information presented and its relationship by years. Where the purpose of the graph is to show absolute magnitudes, the arithmetic scale is used, but where the interest lies in relative rates and in rates of change, the semi-logarithmetic scale is employed.

The second section deals with administration, associated legislation, and general functions of the Division. It will be seen that the volume of registrations accepted, the quantity of correspondence handled, and the amount of revenue collected under the "Vital Statistics Act" and the "Marriage Act" continued to increase with the increasing population of the Province.

The third section contains detailed tables of births, deaths, marriages, adoptions, and divorces in British Columbia for 1945. Included in this section are separate tables dealing with the Indian population of the Province.

Attention is directed to the procedure which was inaugurated in the 1944 Annual Report, whereby the statistical data are presented on the basis of residence rather than by place of occurrence as formerly. This method of tabulation has been found to be the most practical and useful for the majority of requirements.

The Division of Vital Statistics is only one of the several Divisions of the Provincial Board of Health. It is the function of the Division of Vital Statistics to co-operate with the other Divisions in carrying out its part in the public health programme laid down by the Provincial Health Officer, who is in charge of the administration of the Provincial Board of Health. The Division of Vital Statistics is expected to compile various types of data, to standardize forms and record systems generally throughout the Divisions of the Provincial Board of Health, and to assist the other Divisions in the preparation of the statistics and format of their reports.

MAP 1.—MAP OF BRITISH COLUMBIA, SHOWING STATISTICAL DIVISIONS AND SUBDIVISIONS.

PART I.—GENERAL STATISTICAL SUMMARY OF BIRTHS, DEATHS, AND MARRIAGES.

(By Place of Residence.)

GENERAL SUMMARY.

The 18,877 births in British Columbia in 1945 show a slight decrease as compared to the 18,999 in the previous year. The rate continued its decline from 20.9 in 1943 to 19.9 in 1945. The marriage rate, which has been on a downward trend for the last three years, now shows a definite increase, being 9.8 per 1,000 population, while the total number of marriages performed was 9,262. The number of deaths in 1945 rose from 9,697 to 9,756, although the rate per 1,000 population declined slightly to 10.28. The rate for 1944 was 10.40. Table 1 shows crude birth, death, and marriage rates for British Columbia, 1911–1945.

TABLE 1.—CRUDE BIRTH, DEATH, AND MARRIAGE RATES FOR BRITISH COLUMBIA, 1911–45.

Year.	Population.	Births.		Deaths.		Marriages.	
		No.	Rate.	No.	Rate.	No.	Rate.

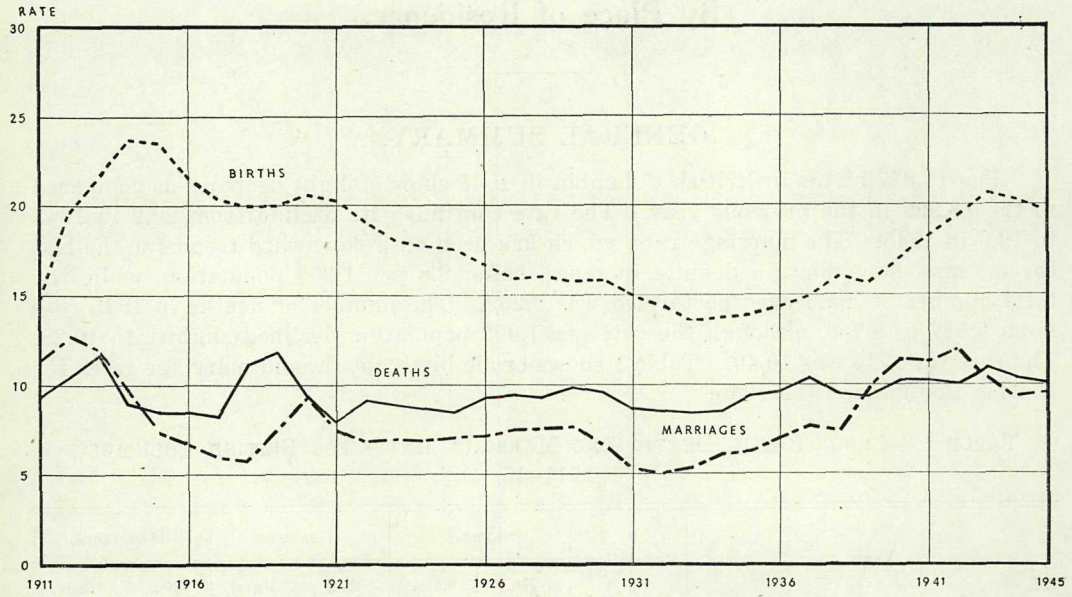
GRAPH A.—CRUDE BIRTH, DEATH, AND MARRIAGE RATES FOR BRITISH COLUMBIA, 1911–45.

(Rates per 1,000 population.)



NATURAL INCREASE.

The rate of natural increase, which has been rising for the last six years, dropped in 1945 to 9.71 per 1,000 population. Table 2 shows the rate of natural increase for the five-year period 1941 to 1945.

TABLE 2.

MORTALITY.

PRINCIPAL CAUSATIVE FACTORS IN BRITISH COLUMBIA.

The mortality rate continued its decline from 10.40 per 1,000 population in 1944 to 10.28 per 1,000 population in 1945, although it still ranks among the highest since 1911. The trend of the three chief causes of death—diseases of the heart and arteries, cancer, and accidental deaths—which fell off slightly in 1944, increased again this year. Diseases of the heart and arteries alone accounted for 36.1 per cent. of all deaths, the total number of fatalities being 3,523. The figure last year stood at 3,444, while the rate

per 100,000 population was 369.5, as compared with a rate of 371.2 in 1945. Since 1931 cancer and accidental deaths have remained in second and third places respectively. Cancer was responsible for 1,407 deaths, thus increasing the rate from 144.8 per 100,000 population in 1944 to 148.3 per 100,000 population in 1945. A total of 738 accidental deaths occurred in the Province this year, an increase over the total of 655 last year. This raised the rate per 100,000 population from 70.3 to 77.8. Although the number of tuberculosis deaths showed an increase, the rate per 100,000 population was slightly decreased, going from 55.5 in 1944 to 55.3 in 1945.

Deaths in the age-group 50 years and over accounted for 74.6 per cent. of the total, while 17.3 per cent. appeared in the 1–49-year age-group and 8.1 per cent. in the group under 1 year. Excluding Indian deaths, the mortality rate in the group 50 years and over rose to 78.0, while that in the 1–49-year group dropped to 15.3, and in the under 1-year group was 6.6. Indian deaths comprise 23.1 per cent. of all deaths under 40 years of age and 23.5 per cent. of infant deaths, but only 2.4 per cent. of deaths over 40 years of age.

Since the Provincial Board of Health has no jurisdiction over the Indians, statistics on these mortality rates have been made up to show the position " Including Indians " and " Excluding Indians " separately.

The infant mortality rate, which has been increasing for the past three years, reached the figure of 42.0 per 1,000 live births in 1945, as compared with last year's figure of 40.4 per 1,000 live births. When Indians are excluded, the rate rises from 32.8 per 1,000 live births in 1944 to 34.3 per 1,000 live births in 1945. For Indians the rate was 151.1 per 1,000 live births, a decrease from that of last year, which was 153.1.

In the " Excluding Indians " group, premature birth again remained the leading cause of infant deaths, the number rising from 196 in 1944 to 217 in 1945, and so constituting a percentage of 35.8. Malformations remained high, accounting for 18.2 per cent. of all infant deaths, while injury at birth was responsible for 9.4 per cent.

Maternal mortality remained exactly the same as in the previous year, the rate being 2.6 per 1,000 live births including Indians and 2.4 per 1,000 live births excluding Indians, in both cases. The rate for Indians was slightly less, being 5.7 per 1,000 live births, as against 5.8 per 1,000 live births in 1944.

To give full meaning to statistics on the leading causes of death, relationships have been drawn up with respect to these causes and their place in the different age-groups. The data that follows is excluding Indians.

Diseases of the heart and arteries remains the foremost cause of death and leads all age-groups over 50 years. It constitutes 46.6 per cent. of all deaths in these age-groups.

Cancer appears in third place in both the 20–29- and 30–39-year age-groups; it is the leading cause in the 40–49-group and rises to second place in all groups over 50 years of age. The disease comprises 5.5 per cent. of all deaths in the 20–29-year age-group, 13 per cent. of deaths in the 30–39-year group, 20.5 per cent. in the 40–49-year group, and 16.6 per cent. of all deaths over 50 years of age.

From 1 to 39 years the leading cause of death was accidents, there being 210 in number, or 24 per cent. of all fatalities in this group. The total number of accidental deaths in all age-groups was 691, an increase over the 620 in 1944, and these constituted 7.6 per cent. of all deaths.

Chronic nephritis, still the fourth leading cause, becomes important in the age-groups from 60 to 79 years, being in fourth place in both cases. Deaths from this cause rose this year, resulting in 387 in all, or 4.2 per cent. of all deaths.

Tuberculosis once more appears in fifth place, and if Indian deaths were included, it would stand fourth. It stood second in the age-groups 5 to 39 years and, along with pneumonia, stood second in the age-group 1 to 4 years. From 40 to 59 years it dropped

to fourth place. Of the 814 deaths occurring in the groups 1 to 39 years, 17.8 per cent. were due to tuberculosis.

The sixth leading cause in 1945 was pneumonia. It was the fourth leading cause of infant mortality and mortality in the 80 years and over age-group, while it appeared in second place in the 1–4-year age-group.

Three hundred and forty-five fatalities resulted from cerebral hæmorrhages. Deaths from this cause have been increasing since 1942.

Diseases of early infancy dropped to eighth place in the causes of death, taking a toll of 327, as compared with 330 in 1944.

Diabetes, remaining the ninth leading cause, was responsible for 176 deaths, one less than the figure of 177 last year. As in 1944, it accounted for 1.9 per cent. of all fatalities.

In tenth place stood congenital malformations. Deaths from this cause rose to 128, an increase over last year's 118, and were responsible for 1.4 per cent. of the total mortality.

The Dominion Government is responsible for the Indians of the Province, although in a few districts the Dominion Government buys public-health service from the Provincial Board of Health.

As in previous years, the ten leading causes of death in the Indian population differ markedly from those of the rest of the population. In the "other than Indian" population the chief causes of death are non-communicable diseases, but among the Indians the greatest number of deaths are due to communicable diseases and virus diseases affecting the respiratory system.

Tuberculosis is again the leading cause of Indian mortality, taking 173 lives, and constitutes 27.4 per cent. of the total Indian deaths. This gives a tuberculosis death rate of 671.6 per 100,000 population, as compared with the white population rate of 38.1.

Pneumonia remains the second leading cause of Indian deaths, with 86 deaths, and diseases of early infancy third, causing 52 fatalities. Accidental deaths appear in fourth place, with 47 victims. Diseases of the heart and arteries, which was the leading cause of death among the white population, ranks fifth among the Indians, causing 43 deaths. Diarrhœa and enteritis, in sixth place, took 30 lives, while cancer, with 18, ranked seventh. Influenza, cerebral hæmorrhage, and congenital malformations filled eighth, ninth, and tenth, places respectively, with 10, 8, and 5 deaths attributable to them.

The tuberculosis mortality rate for the Japanese and Chinese is considerably higher than that for the white population, the rate for Japanese being 108.88 per 100,000 population and for the Chinese 252.40.

AGE AND SEX MORTALITY.

Deaths, including and excluding Indians, are shown according to age-groups and sex, for the five-year period 1941–45, by Tables 3A and 3B respectively.

THE TEN LEADING CAUSES OF DEATH.

Although the ten leading causes of death during 1945 remained the same, the order was slightly changed from that of 1944. These leading causes of death for the period 1936–45 are shown by Table 4A in order of rating, the death-rate per 1,000 population from the various causes, and the percentage of total deaths attributable to each cause. Diseases of the heart and arteries remain the leading cause, comprising 36.1 per cent. of all deaths. Nephritis and pneumonia interchange positions, nephritis now occupying fifth place.

When Indians are excluded, tuberculosis drops back to fifth place, while nephritis is now fourth. Cerebral hæmorrhage, which was the eighth leading cause including Indians, appears in sixth place with the exclusion of Indian deaths, while pneumonia occupies eighth place. The mortality rate for diseases of the heart and arteries shows a definite increase, but the tuberculosis rate declines markedly when Indians are excluded. The ten leading causes of death, excluding Indians, are shown by Table 4B.

MORTALITY FROM NOTIFIABLE DISEASES.

The deaths from notifiable diseases, both including and excluding Indians, for the five-year period 1941–45, is shown by Table 6, as required by the Dominion Council of Health.

On the whole, the number of deaths from notifiable diseases was considerably less than that of 1944. Cancer continued its upward trend, while cerebrospinal meningitis, influenza, and mumps showed a decided decrease. Deaths from diphtheria and encephalitis remained approximately the same, but measles showed an increased mortality rate.

INFANT MORTALITY.

Infant mortality rates, both including and excluding Indians, have been increasing since 1942 and continue to do so in 1945. An increase in the number of deaths over 1944 is shown by diarrhœa and enteritis, diseases of the thymus gland, malformations, tuberculosis, and measles. Prematurity remained the leading cause of infant mortality, taking nearly one-third of infant deaths. A decline is shown in the atelectasis, pneumonia, and congenital debility rates, while influenza has dropped to a rate lower than in any year since 1940.

The leading causes of death for children under 1 year of age, both including and excluding Indians, for the period 1941–45, is given by Table 7.

MATERNAL MORTALITY.

The total number of maternal deaths, as well as the mortality rates, both including and excluding Indians, remained exactly the same as in 1944. There were 50 maternal deaths including Indians, and 43 excluding Indians. These causes of maternal deaths, for the period 1941–45, are shown in Table 9.

MORTALITY FROM TUBERCULOSIS.

In 1945 tuberculosis accounted for 525 of all deaths. The mortality rate neither increased nor decreased from 1944, being 0.55 per 1,000 population for both years.

In Table 10 is shown the distribution of deaths from tuberculosis by the various organs and sites affected, including and excluding Indians, for the five-year period 1941–45.

MORTALITY FROM CANCER (INCLUDING INDIANS).

Cancer deaths have been increasing since 1938 and in 1945 rose to a total of 1,407. As in the previous year, the majority of these were males, there being approximately 200 more male than female deaths.

The distribution of deaths from cancer by the various organs and sites affected, for the five-year period 1941–45, is shown by Table 11.

SPECIAL CLASSIFICATION OF ACCIDENTAL DEATHS.

All accidental deaths are included within the International List of Causes of Death, Nos. 169–195. However, accidental deaths described by International List Nos. 169–176, 180, and 187 are classified under those titles without regard to the nature of the injury. In order that the nature of the injury in many cases may be tabulated, a supplementary code for nature of injury has been used.

Table 12 shows special Classes of Accidental Deaths in British Columbia, classified according to nature of injury in 1945. Included also are the International List numbers. It will be noted that these include only the numbers 169–176, 178, 180–183, 185–187, and 193.

ILLEGITIMATE BIRTHS.

Illegitimacy, which has been increasing since 1924, continued its trend and reached a total of 1,121 births in 1945. The rate per 1,000 live births including Indians was 59.4, while excluding Indians it was 44.9.

The number of illegitimate births and the rate per 1,000 live births, for the period 1936–45, is given by Table 13.

TABLE 13.

Year.	Including Indians.		Excluding Indians.	
	No.	Rate per 1,000 Live Births.	No.	Rate per 1,000 Live Births.
1936	377	35.6	303	31.0

1944	1,048	55.2	777	43.7
1945	1,121	59.4	847	44.9

STILL-BIRTHS.

The number of still-births in British Columbia for 1945 once more shows an increase, after the decrease in the previous year's figure. Although the total number of still-births excluding Indians is less than that including Indians, the rate is slightly higher.

Table 14 shows the number of still-births and the rate per 1,000 living births, including and excluding Indians, for the period 1936–45.

TABLE 14.

MARRIAGES.

Since 1942 the number of marriages in the Province has been decreasing, but in 1945 an upward trend is shown. The number of marriages solemnized was 9,262, while the rate per 1,000 population was 9.8.

Table 15 gives the number of marriages performed, by the conjugal condition of the contracting parties and the rate per 1,000 population, during the ten-year period 1936–45.

PART II.—ADMINISTRATION AND DIVISIONAL ACTIVITIES.

THE CONTRIBUTION OF THE DIVISION OF VITAL STATISTICS TO CANADA'S WAR EFFORT.

The Division's contribution to the war effort was again a significant part of its duties. Only the most important items of assistance in the war effort are outlined herein.

Documentation for Dependents' Allowance Board.—The Division assisted in the searching and certifying of 10,044 vital records pertaining to members of Canada's armed forces. This was a considerable decrease from the previous year, when 19,493 records were searched and certified. The total number of records so documented since the outbreak of war is 90,188.

Military Verification.—The number of verifications for recruiting purposes dropped from 1,087 in the year 1944 to 175 in the current year. Proof of age is a general recruiting requirement for the Air Force. Any Army recruits around the age of 17 or 18 must also supply proof of age. The decrease may be largely attributed to reduced recruiting for the Air Force as well as to the elimination of a certain amount of duplication in military documentation.

Fees Waived for Military Purposes.—The Division continued to waive the statutory fees for delayed registration of birth, legitimation of birth, alteration of Christian name, and correction of documents, etc., providing such services were for military purposes. A complete report was made on each of these cases to the Dependents' Allowance Board in Ottawa. Sometimes investigations were necessary, which required considerable time and effort.

Co-operation with War-time Federal Agencies.—There was no change in the amount or degree of co-operation given by the Division to the National Registration authorities, Selective Service, Wartime Prices and Trade Board, and the Department of External Affairs, whereby proof or verification is regularly given to these bodies.

SUMMARY OF REGISTRATION, 1936–45.

SUMMARY OF REGISTRATION AMONG THE ORIENTAL RACES.

CHINESE.

The total number of Chinese live births registered during the year ended December 31st, 1945, was 147—males 71, females 76. Chinese children born alive during 1945 numbered 132—males 63, females 69. The balance—8 males and 7 females—were born prior to the year 1945. There were no still-births. The number of Chinese deaths registered during the year 1945 was 334—325 males and 9 females—as against 357 in 1944. A total of 40 deaths—39 males and 1 female—was due to tuberculosis, and 39 deaths—37 males and 2 females—were due to cancer. Deaths of children under 1 year of age numbered 2—both males.

JAPANESE.

In the year ended December 31st, 1945, there was a total number of 348 Japanese live births. Of these, 183 were males and 165 females. The number born alive during the year 1945 was 335—males 175, females 160. Previous to 1945 there were 13 Japanese children born—males 8, females 5. Still-births numbered 4—males 3, females 1. Deaths registered in 1945 were 113—81 males and 32 females—as against 105 in 1944. Tuberculosis deaths totalled 16—11 males and 5 females—while cancer deaths numbered 20—18 males and 2 females. There were 14 deaths of children under 1 year; of these, 6 were males and 8 females.

SUMMARY OF REGISTRATION AMONG INDIANS.

Registration of live births of Indians for the year ended December 31st, 1945, totalled 1,650—males 835, females 815. Of these, 8 males and 16 females were born outside the Province. There was a total registration of 611 deaths—312 males and

299 females—including 5 males and 4 females dying outside the Province. There were 12 still-births—9 males and 3 females. There were 190 children who died under 1 year of age, 107 being males and 83 females. Deaths from tuberculosis numbered 160—71 males and 89 females; from cancer 19—11 males and 8 females. Indian registrations numbered 182.

DOUKHOBOR REGISTRATION OF BIRTHS.

The Division has continued the registration of Doukhobor births in co-operation with the Provincial Police, in accordance with instructions received in May, 1937. There have been 3,637 registrations filed since then.

Table 3 shows Doukhobor births registered during 1945 and the cumulative total from 1937 to 1945, by actual year of birth and sex of child.

FRAUDULENT REGISTRATION OF BIRTHS.

Under section 13 of the "Vital Statistics Act" there were thirty-two cases of fraudulent or improper registration of births disposed of in 1945, as compared to the twenty-eight cases that were looked into and cleared in 1944.

LEGITIMATION OF BIRTHS.

In 1945, 131 births of children born out of wedlock were legitimated subsequent to the marriage of the natural parents. After complete investigation by the Division, a substitution was filed in each case showing the child as legitimate from birth.

The Division has adopted the routine procedure of referring all cases of intended legitimation to the Superintendent of Child Welfare to be checked, unless both natural parents had acknowledged parentage by registering the birth promptly and by jointly signing the original document showing the child to be illegitimate.

STATUTORY NOTATIONS ENTERED.

In accordance with the provisions of the "Vital Statistics Act," in 1945 there were 412 notations entered upon registrations previously filed. This is a decided decrease as compared to the previous year's figure of 664. These were for correction of errors and alteration of Christian or given names only.

DELAYED REGISTRATION OF BIRTHS.

In 1945 the total number of delayed registrations of births investigated and subsequently ordered jumped to 1,160, a considerable increase over the 985 in 1944. Of

these, 847 were completed upon payment of the registration fee of $2, realizing a revenue of $1,694, a decrease of $90 as compared with last year's figure. There were 313 registrations accepted free of charge. This large increase over the 92 in 1944 was due not only to the Order in Council which covered certificates for children whose parents were certified to be in destitute circumstances, and application for delayed registrations for military purposes, but also to the fact that the fees were waived for the many Indian registrations that were filed in 1945.

SCHOOL-TEACHERS' RETURNS UNDER THE "VITAL STATISTICS ACT."

Reports were received from 1,157 teachers, from a total of 864 schools, for the school-year 1944–45. This includes as many of the private schools in the Province as it has been possible to contact. A total of 11,706 children attending elementary grades were covered by these reports, of which 8,267 were born in British Columbia and 3,439 elsewhere.

Of the private schools that were contacted, 751 were found to be born in British Columbia and 482 outside the Province.

The birth records were searched thoroughly for each child, taking first the date of birth as reported by the teacher. If the registration of the birth was not found there, the records for the preceding and following months and years were searched before the child was finally listed as unregistered.

The following table shows the results:—

TABLE 6.

	Born in British Columbia.	Born outside British Columbia.	Registered.	Unregistered.
Public schools	8,267	404	7,863	404
Private schools	751	482	689	62
Totals	9,018	886	8,552	466

Notices were sent to the parents of the 404 children attending public schools who were not registered. Of these, 24 were found never to have been registered, 61 were born outside British Columbia, and 25 were registered on dates other than those reported in school; 145 were discovered to be attending school under different surnames and 10 under different Christian names, while 24 were registered among Indians. Of the 24 not registered, 14 delayed registrations have been accepted. Sixty-two were not heard from and 52 were not registered for other reasons.

The parents of the unregistered children attending private schools were also notified, and the following information was obtained: 1 was found never to have been registered, 20 were born outside the Province, and 9 were registered on dates other than those reported in school; 13 were discovered to be attending school under different surnames and 3 under different Christian names, while 2 were registered among Indians; 7 were not heard from and 6 were not registered for other reasons. The registration has since been effected of the one birth previously unregistered.

In summarizing, out of 9,018 children born in British Columbia and reported, 8,552 or 94.8 per cent. were registered. The balance of the unregistered births is being checked by the Division by means of follow-up letters, which should increase the number of delayed registrations effected.

REGISTRATION OF MINISTERS AND CLERGYMEN.

In 1945 the Registrar granted 277 applications for registration, an increase of 10 over the preceding year, while the number of cancellations was 338, as compared to 233 in 1944. The number on register at the end of the year was 1,368, a decrease of 61 from last year's figure.

TABLE 7.

	Permanent.	Temporary.	Total.
Total authorized during 1945	187	90	277
Total authorized from September 1st, 1930, to December 31st, 1945	2,765	587	3,352
Total cancelled during 1945	224	114	338
Total cancelled from September 1st, 1930, to December 31st, 1945	1,426	559	1,985
Number on register, December 31st, 1945	1,339	28	1,367

The registration of ministers and clergymen according to religious denomination at the end of 1944 and 1945 is given by Table 8.

† Includes 28 temporaries (4 Church of England, 1 Baptist, 4 United Church, 1 Presbyterian, 4 Roman Catholic, 1 Apostolic Church of the Pentecost, 13 Chaplaincy Service).

REGISTRATION DISTRICTS.

At the close of the year the Division of Vital Statistics had eighty-five district offices and fourteen sub-offices. There are nineteen Indian Agents acting as District Registrars for Indians. Some thirty district offices were inspected during the year, and four Indian Agencies of the Province were also inspected. Some of these district offices had been visited very infrequently in the past. The inspections proved worth while from the standpoint both of checking on the records kept in the district offices and instructing the District Registrars and their deputies on points in connection with their work. The Division is keenly appreciative of the co-operative attitude shown by the District Registrars and their deputies.

The Government Agents' Conference held in the fall enabled members of the Division to meet and discuss mutual problems with these officials, who in all cases were District Registrars. In turn, they were given an opportunity to see the workings of the Division.

PRESERVATION OF RECORDS.

Microfilm.—The necessity to preserve the records of the Division through the process of microfilming was outlined in detail in the report for the year 1942. As foreshadowed in last year's report, all the marriages on file in the Division were microfilmed in 1945, the births having been completed the previous year. At the end of the year a start was made on the death registrations. The replacement of typed transcripts for the Dominion Bureau of Statistics by microfilm plus a serious amount of mechanical trouble prevented completion of the deaths by the year's end. When all the vital records in the Division have been microfilmed, certificates may be typed from the film itself or positive enlargements made from the negative film. In addition, consideration is being given to the possibility of establishing a duplicate of microfilmed records for the whole Province in the office of the District Registrar at Vancouver. As this office serves almost half of the population of the Province, such a plan would appear to be extremely worth while. Often certificates are required in a rush, and this demand could be met without delay.

ADMINISTRATION OF THE "MARRIAGE ACT."

During the year, five denominations applied for registration under the "Marriage Act." Three—B.C. Evangelical Mission, Khalsa Diwan Society, and the Maple Ridge Baptist Church—were recognized; one was refused. At the end of the year there were four applications pending, one carried over from the year previous. Five other applications were dropped during the year. It is not the policy of the Division to recognize any denomination of a "mushroom growth" type of organization, as this does not appear to be the intent of the "Marriage Act."

LEGISLATION.

The "Marriage Act."—This Act was amended to prevent any marriages by proxy, by providing that both parties should be present at the ceremony. The amendment also removes the discrimination as to residence requirements for persons married by civil contract compared to those married by licence. With the growth of better transportation facilities, many people tend to come to the bigger centres to transact their business. Often the centre was just outside the boundaries of the registration district of residence of one of the parties to the intended marriage. Previously, at least one of the parties to a civil marriage had to reside for at least eight days in the district where the Marriage Commissioner was located. This meant that such marriages could not be performed. The amendment had the effect of broadening the residence

qualifications from a district to a Provincial basis. The Act was further amended to provide that where a marriage by civil contract was performed in good faith although an irregularity might have occurred therewith, the marriage shall not become invalid because of the irregularity. This amendment gives similar protection to that previously in effect in connection with the irregular issuance of a licence.

The "Vital Statistics Act."—This Act was amended to strengthen the administrative procedures in regard to the work of the Division and to create a properly defined legal means of making agreements between the Dominion and the other Provinces.

The amendment is briefly summarized hereunder, section by section:—

Section 2: Still-birth, previously undefined, was defined along with one or two other minor additions to the definition.

Section 3: Permits the Director of Vital Statistics to accept such evidence as hospital records, baptismal certificates, and other forms of proof substantiating the facts of birth in connection with applications for delayed registrations of birth. Previous to this amendment, no evidence of this nature was required by the Act.

Section 4: The time for appeal to a Judge of the Supreme Court against the refusal of the Director of Vital Statistics to register a birth was limited by the amendment to one year.

Section 5: The practice of issuing certificates of adoption under signature of the Provincial Secretary had become obsolete, and, therefore, the reference to this method of certification was deleted from the Act.

Section 6: This section permits the issuance of a birth certificate in the adopted name of a child born in this Province but adopted in any country through a Court of competent jurisdiction, providing evidence of adoption is submitted to the Division.

Section 7: Before the given or Christian name of any child under 12 years of age is altered, the consent of both parents must be obtained, except under exceptional circumstances. Previously, only one parent need apply for alteration of a child's given or Christian name.

Section 8: This section permits a notation of change of name to be made on the birth registration of a child born in this Province in the event of evidence being received of a proper change of name being made in another Province.

Section 9: Introduces a proviso—*see* section 11.

Section 10: Permits the acceptance of a delayed registration of death by the Director of Vital Statistics, together with the machinery to provide an appeal to the Court against the decision of the Director. This is similar to the procedure in connection with the delayed registration of birth.

Section 11: Prior to the enactment of this section and contrary to the provisions of the "Vital Statistics Act," many deaths were registered originally in the District Registrar's office other than the office of the district where the death occurred. Strict enforcement of the Act as it stood would have caused the undertakers considerable inconvenience.

Section 12: Permits the Director to obtain additional statistical information on divorces from information in the hands of the Supreme Court Registrars.

Section 13: Permits a notation of divorces occurring in another Province to be made on the original registration of marriage on file within the Division.

Section 14: Permits the correction of an error on the registration on file in the District Registrar's office if initialed by the person who originally

completed the registration, otherwise the correction will have to be made by marginal notation.

Section 15: Permits the Lieutenant-Governor in Council to authorize the period whereby returns are made from the District Registrar to the central office of the Division. As a result of this amendment, an Order in Council was passed which read as follows: Commencing October 22nd, the District Registrars of Births, Deaths, and Marriages shall mail or deliver to the Director of Vital Statistics on each Monday the returns accompanied by all original registrations made by the District Registrars under the "Vital Statistics Act" during the week immediately preceding.

Section 16: The method of indexing as previously specified in the Act was obsolete and had become inoperative. Therefore, mention of it was removed from the Statutes.

Section 17: After fulfilling certain conditions, fully qualified public-health officials may obtain all necessary information pertaining to vital statistics for carrying out a proper public-health programme.

Section 18: This section permits the Division to issue photographic prints or photostatic copies of certificates, and it gives them the same legal status as ordinary certificates issued by the Director or the District Registrars.

Section 19: This section deletes the word "monthly." An explanation for this deletion is provided by section 15.

Section 20: This section deleted any reference to verification or certification for the Department of Pensions and National Health, making possible a broader arrangement. *See* section 21.

Section 21: Permits the Provincial Secretary to enter into an agreement with other Provinces or with the Dominion in regard to vital statistics. Vital statistics records are more and more in demand for all purposes of government, and this section has been drafted to permit flexibility in making arrangements with the Dominion or the other Provinces in respect to vital statistics matters.

Section 22: No other system of registration of births, deaths, and marriages is permitted by this section.

A time may come when it will be no longer necessary for teachers to make a return of births of all children entering elementary school for the first time. If this stage in registration is attained, there is provision whereby an Order in Council can be proclaimed ending the making of returns by the teacher.

The volume of certificates issued in the Division is so great that it is impossible for the Director of Vital Statistics to sign each one. This section of the amendment permits what has already become an established practice, that is, of printing his signature on such documents.

The "Wills Act."—This Act was amended to allow a person who has executed a will to file a notice in the Division of Vital Statistics stating where the will is situated. Upon fulfilling certain conditions, a search can be made in the files of the Division to ascertain whether or not a notice has been filed. Fees are charged both for the filing of a notice and for a search.

Following the passage of this legislation, a rule was made by the Chief Justice of the Supreme Court that, before any estate was probated, a search has to be made of the notices on file with this Division. The result was a greater number of searches than was anticipated by this Division at the time the legislation was passed.

An Act respecting the Status of Children of certain Marriages.—Where a presumption of death has been obtained and a marriage has subsequently been performed

and the person presumed dead is later found to be alive, the children of the persons entering into such marriage ceremony shall for all purposes be deemed to be legitimate from the time of birth. Prior to this amendment there was no protection for the children born of such a marriage in so far as their legitimacy was concerned.

GENERAL OFFICE ROUTINE.

The increase in correspondence continued through this year, there being 37,600 letters coming into the Division, as compared with 35,397 in 1944; and 41,331 going out, as compared with 39,743 last year. The number of ordinary revenue-producing searches costing 50 cents made in 1945 was 21,320, and the number of Province-wide searches made at a rate of $2 was 847. During the calendar year 1945 the revenue collected in the central office of the Division at Victoria under the "Vital Statistics Act" totalled $28,744.80, as against $28,131.35 in 1944, while the revenue collected under the "Marriage Act" amounted to $5,260, as against $4,180 the previous year. The total revenue for the central office amounted to $34,004.80, an increase over the $32,311.35 collected in 1944.

The total revenue collected for the whole Province for the calendar year 1945 was $80,733.80, as compared with $76,070.67 in 1944. Under the "Vital Statistics Act" the revenue brought in was $38,536.80, as against $37,691.67 last year, while under the "Marriage Act" $42,197 was collected, as compared with $38,379 the previous year.

The Dependents' Allowance Board was assisted by the Division in making 10,044 free searches for men in the armed forces to check statements on their applications for allowances; 19,493 such searches were made in 1944.

Co-operation between this Division and the Dominion Bureau of Statistics continued in the matter of forwarding copies of all registrations of births, deaths, and marriages for the compilation of national vital statistics.

The Division of Vital Statistics continued to assist in the publication of the monthly bulletin of the Provincial Board of Health.

PART III.—DETAILED TABLES OF BIRTHS, DEATHS, MARRIAGES, ADOPTIONS, AND DIVORCES IN BRITISH COLUMBIA, 1945.

(Classified by Place of Residence.)
