DEPARTMENT OF HEALTH AND WELFARE

VITAL STATISTICS

OF THE PROVINCE OF BRITISH COLUMBIA

SEVENTY-SIXTH REPORT

FOR THE YEAR

1947

VICTORIA, B.C.:
Printed by DON MCDIARMID, Printer to the King's Most Excellent Majesty.
1949.

VICTORIA, B.C., May 16th, 1949.

To His Honour CHARLES A. BANKS,
Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report on Vital Statistics in the Province of British Columbia for the year 1947.

GEO. S. PEARSON,
Minister of Health and Welfare.

DEPARTMENT OF HEALTH AND WELFARE,
VICTORIA, B.C., May 16th, 1949.

The Honourable G. S. Pearson,
Minister of Health and Welfare, Victoria, B.C.

SIR,—I have the honour to submit the Seventy-sixth Report on Vital Statistics in the Province of British Columbia.

I have the honour to be,
Sir,
Your obedient servant,

G. F. AMYOT,
Deputy Minister of Health and
Provincial Health Officer.

DIVISION OF VITAL STATISTICS,
VICTORIA, B.C., May 16th, 1949.

G. F. Amyot, Esq., M.D., D.P.H.,
Deputy Minister of Health, Victoria, B.C.

SIR,—I have the honour to submit the Seventy-sixth Report on Vital Statistics in the Province of British Columbia for the year ended December 31st, 1947.

I have the honour to be,
Sir,
Your obedient servant,

J. D. B. SCOTT,
Director of Vital Statistics.

Vital Statistics Report, 1947.

INTRODUCTION.

This is the Seventy-sixth Report on the Vital Statistics of British Columbia, and covers the calendar year January 1st to December 31st, 1947.

For facility of reference the Report is divided into three sections. The first section is a summary of vital statistics data, showing not only pertinent facts from the current year's Report, but also time trends over a period of years. Where possible, tables are accompanied by graphs to afford the reader a more ready appreciation of the information presented and its relationship by years. Where the purpose of the graph is to show absolute magnitudes, the arithmetic scale is used, but where the interest lies in relative rates and in rates of change, the semi-logarithmic scale is employed.

The second section deals with administration, associated legislation, and general functions of the Division. Reference has also been made to the completeness of registration and the problems relating thereto. A summary of the most important results of the Vital Statistics Council of Canada is included. It will be seen that the volume of registrations accepted has increased by 12 per cent.; a slight decline in correspondence occurred, and this applies also to the amount of revenue collected under the Vital Statistics, Marriage, Change of Name, and Wills Acts.

The third section contains detailed tables of births, deaths, marriages, adoptions, and divorces in British Columbia for 1947. Included in this section are separate tables dealing with the Indian population of the Province.

Attention is directed to the procedure which was inaugurated in the 1944 Annual Report, whereby the detailed statistical data tabulated by the Dominion Bureau of Statistics is presented on the basis of residence rather than by place of occurrence. This method of tabulation has proved to be most practical and useful for the majority of requirements.

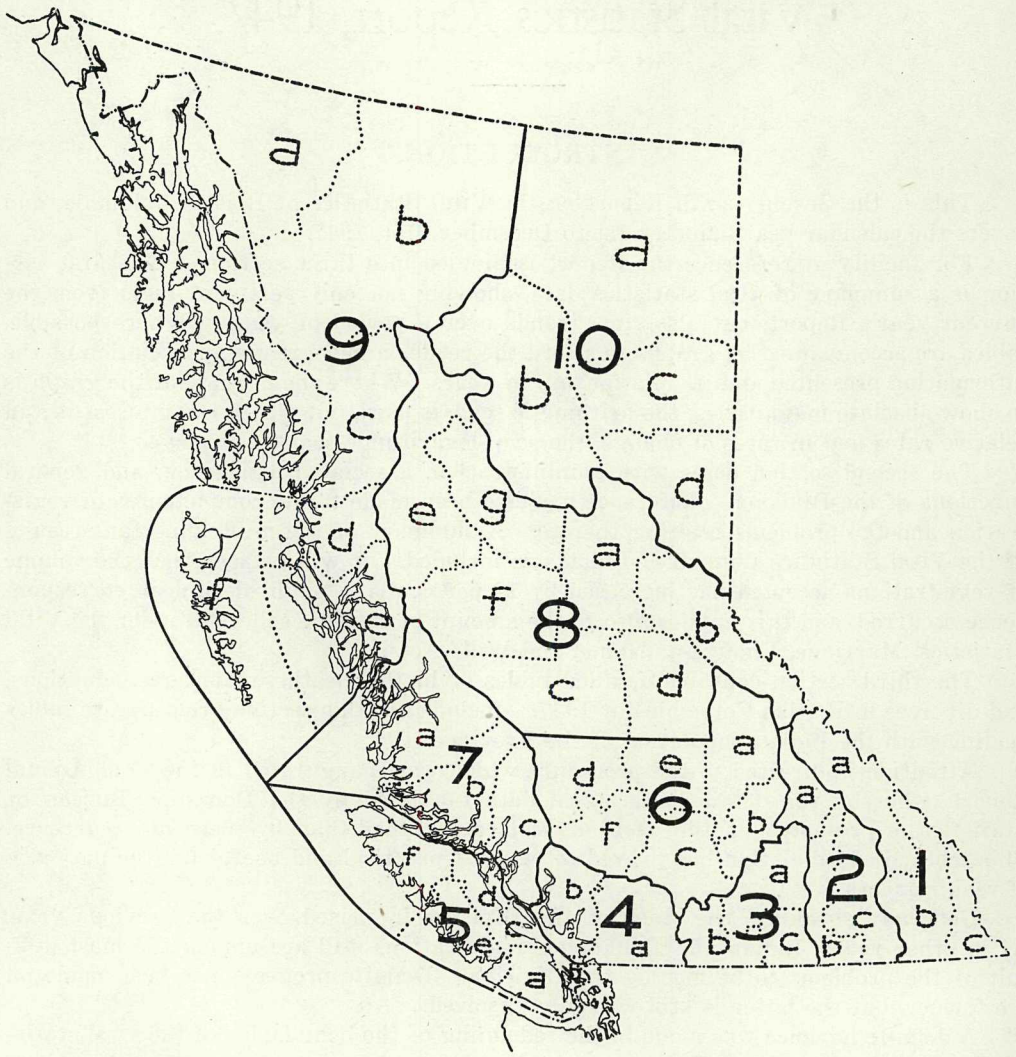
Generally speaking, the work of the Division increased over the previous year. As in other years, Indian and Doukhobor registrations still are among the most difficult of the problems to be met by the Division. Definite progress has been made on the former, but the latter is still virtually unsolved.

A definite advance was made in the redefining of the boundaries of the vital statistics registration districts. These were drafted in such a way as to coincide as much as possible with the school-district boundaries.

The Division has expanded its statistical services to provide the Department of Health with a greater range of information on matters pertaining to health. The Division of Vital Statistics is expected to compile various types of data, to standardize forms and record systems generally throughout the other divisions of the Health Branch, and to assist them in the preparation of the statistics and format of their reports.

Additional guidance on statistical matters will have to be given to health units, as their number increases each year. Also, the greater interest in medical economics provides an indication of what may be expected of the responsibilities of the Division in the future.

MAP 1.—MAP OF BRITISH COLUMBIA, SHOWING STATISTICAL PUBLICATION AREAS.



PART I.—GENERAL STATISTICAL SUMMARY OF BIRTHS, DEATHS, AND MARRIAGES.

(By Place of Residence.)

GENERAL SUMMARY.

The births during 1947 numbered 26,286, showing a considerable increase over last year's total of 22,609. Accordingly, the birth-rate rose to 25.18, as against the 1946 rate of 22.54. Marriages have been increasing steadily each year since 1945, although the corresponding rates have not shown a continuous increase. In 1947 there were 11,852 marriages, giving a rate of 11.35 per 1,000 population, a rate slightly lower than in 1946. Deaths totalling 10,613 in 1947 exceeded last year's total by 476, and the death-rate (10.17) remained very close to that of 1946.

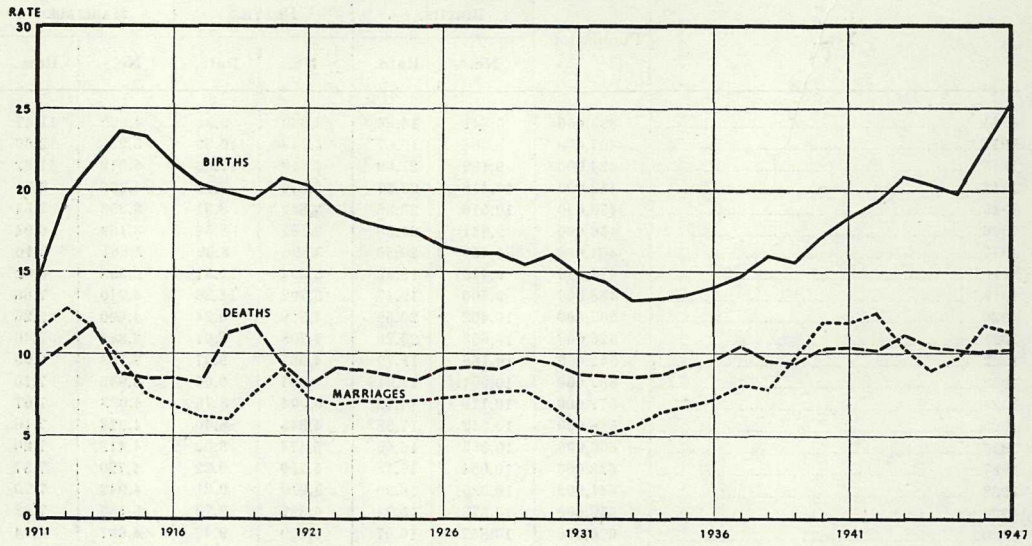
GRAPH A.—CRUDE BIRTH, DEATH, AND MARRIAGE RATES FOR BRITISH COLUMBIA, 1911–47.

(Rates per 1,000 population.)



NATURAL INCREASE.

The rate of natural increase again rose this year, surpassing the preceding record of 12.43 per 1,000 population by 2.58. Thus the 1947 figure of 15.01 becomes the highest rate recorded. Table 4 shows the rate of natural increase for the five-year period 1943–47.

ILLEGITIMATE BIRTHS.

The number of illegitimate births in British Columbia has been mounting steadily for over a period of ten years, and in 1947 totalled 1,502. This figure exceeded that of 1946 by 240. Accordingly, the rate per 1,000 live births increased to 57.1 over last year's figure of 55.8.

The number of illegitimate births and the rate per 1,000 live births for the period 1938–47 is given in Table 5.

BIRTHS AND DEATHS IN INSTITUTIONS.

Births in institutions continued on an upward trend as maintained during the past ten years, recording 25,134 births—a percentage of 95.6 of the total in the Province.

From 1938 to 1944, excepting the year 1941, successive increases were revealed also in the percentage of deaths hospitalized. However, in 1945 the figure decreased slightly, remaining fairly constant for one year, and in 1947 the highest percentage (60.5) of deaths occurring in institutions was recorded.

MORTALITY.

PRINCIPAL CAUSATIVE FACTORS IN BRITISH COLUMBIA.

The mortality rate in British Columbia, which has been declining since 1944, remained almost constant this year, with a rate of 10.17 per 1,000 population, as compared with the 1946 figure of 10.11. The first three causes of death—diseases of the heart and arteries, cancer, and accidental deaths—continued to augment in number during 1947. The primary cause alone was responsible for 3,860 deaths, making a rate of 369.7 per 100,000 population, over the rate of 357 in 1946. Deaths from cancer have increased steadily throughout the past ten years and have, in 1947, reached 1,486, 14 per cent. of the total fatalities, as against 987 in 1938. The number of tuberculosis deaths has diminished from 576 in 1946 to 536 in 1947, the rate per 100,000 population going from 57.4 to 51.3.

Deaths in the group aged 50 years and over again represented nearly three-quarters (73.15 per cent.) of the total deaths; ages 1–49 years, 17.82 per cent; and under 1 year of age, 9.03 per cent. Excluding Indians, mortality in the group 50 years and over accounted for 76.62 per cent. of the total, while that in the 1–49 group dropped to 15.99 per cent., and in the group under 1 year was 7.39 per cent.

Since the Indian population does not come under the jurisdiction of the Provincial Department of Health and Welfare, but is one of the responsibilities of the Federal Government, it is necessary that Indian and other-than-Indian statistics be considered separately.

In the other-than-Indian group there were 734 deaths of infants under 1 year of age, 7.39 per cent. of all deaths, and 70.31 per cent. of fatalities under 20, within this category. Prematurity was the greatest single cause of infant mortality, with 255 deaths—34.7 per cent. of all infant deaths.

For the total population the infant mortality rate of 36.5 per 1,000 live births decreased slightly from the rate of 37.7 as set by the previous year. When the Indian population is excluded, the rate diminishes considerably to 29.5 per 1,000 live births.

An encouraging note is the continued drop in the rate of maternal mortality. This year the figure stood at 1.2 per 1,000 live births for both the entire population and that excluding Indians.

In order to obtain a better perspective regarding the causes of death and their relative importance, it is necessary to study their incidence in specific age-groups. The following discussion deals with causes of death solely within the category " excluding Indians."

Diseases of the heart and arteries maintained the position of leading cause for all groups over 40 years of age, forming 45.5 per cent. of the deaths in these age-groups, whereas, in the earlier age-groupings, accidental deaths caused the majority of the fatalities.

The greatest number of cancer deaths occurred among those falling in the categories over 40 years of age. In each of these particular groupings, this disease ranked second in rate of incidence to diseases of the heart and arteries. Cancer comprised 3.3 per cent. of all deaths within the group 5–9 years, inclusive, 12.9 per cent. of those in the 30–39-year age-group, 18.2 per cent. of those in the 40–49-year age-group, and was accountable for 16.9 per cent. of all deaths over 50 years of age in 1947.

Accidents were responsible for the majority of deaths in the younger age-groups, accounting for 32.6 per cent. of all fatalities within these particular groups. In all the groups from 1 to 39 years of age, accidental deaths ranked first as a cause.

Tuberculosis, again the fifth leading cause of death, accounted for more deaths in the age-group 20–29 years than in any other, being responsible for a percentage of 21.9 of the deaths in this group. If the Indian figures were included, this disease would rank in fourth place. It stood second in the age-groups 10–19, 20–29, and 30–39 years. However, in the age-group 40–49 years it dropped to fourth in position. Of the 883 deaths that occurred between the years 5 to 39, inclusive, 16.3 per cent. were due to tuberculosis.

Nephritis fell in sixth place this year among the causes of death, appearing third, along with pneumonia, in the group 10–19 years.

Pneumonia was also a principal cause of death among the younger population, accounting for twelve fatalities in the group 1–19 years, or 3.9 per cent. of the deaths within this group.

This year, as in previous years, the ten leading causes of death among the Indian population differed distinctly from those among the rest of the population. In the other-than-Indian categories the foremost causes of death are due chiefly to non-communicable diseases, but among the Indians the greatest number of deaths are caused from virus diseases affecting the respiratory system and those which are communicable.

Tuberculosis was once more the foremost cause of Indian deaths with a total of 174 fatalities, and pneumonia followed in second place with 80 deaths, followed by diseases peculiar to the first year of life with 64 deaths. Diseases of the heart and arteries came fourth this year, deaths from this cause numbering 157. Accidental deaths accounted for 52 fatalities. Diarrhœa and enteritis recorded 29 deaths, a slight increase over the 25 fatalities from this cause recorded in 1946. The number of influenza deaths decreased by two for this year, totalling 23. Cancer accounted for 17 deaths among the Indian population. Fatalities from syphilis, amounting to 7, followed in ninth place, while deaths from congenital malformations and from cerebral hæmorrhage tied for tenth place, each with a total of 5 deaths.

The tuberculosis mortality rate for the Oriental population is still notably higher than that of the white population; the rate for the Japanese is 171.4 per 100,000 population, and for the Chinese 266.2.

AGE AND SEX MORTALITY.

Deaths, including and excluding Indians, are shown according to age-groups and sex, for the five-year period 1943–47, by Tables 7A and 7B respectively.

THE TEN LEADING CAUSES OF DEATH.

The ten leading causes of death in 1947 remained constant, although their order differed from that of 1946. In 1947 diseases of the heart and arteries, cancer, accidental deaths, and tuberculosis remained in first, second, third, and fourth places respectively. Diseases of early infancy and pneumonia ranked fifth and sixth this year, followed by nephritis, cerebral hæmorrhage, diabetes, and congenital malformations.

When Indians are excluded, tuberculosis dropped back to fifth place and nephritis moved up to sixth. Cerebral hæmorrhage, which was the eighth leading cause, became seventh when the Indian figures were excluded, and pneumonia occupied eighth place. The mortality rate dropped considerably when the Indian figures were excluded.

MORTALITY FROM NOTIFIABLE DISEASES.

The deaths from notifiable diseases for both the including and excluding Indian groups during the period 1943–47 are shown below in Table 10. This is the required list as stipulated by the Dominion Council of Health.

Increases are again apparent in the total number of deaths from cancer and from bronchial pneumonia, whereas decreases are noted in the number of deaths from tuberculosis, paratyphoid fever, influenza, and syphilis.

INFANT MORTALITY.

Infant mortality rates, for both including and excluding Indians, maintained the downward trend for 1947, as set by the previous year. There was a decrease in number of deaths from influenza in the groups including Indians, but in the excluding-Indian group there were no fatalities from this disease at all. There was a considerable increase in deaths from tuberculosis, whooping-cough, and injury at birth for both groups. Prematurity, the leading cause of death among children under 1 year, accounted for 31.3 per cent. of the 1947 infant deaths.

The leading causes of death among children under 1 year of age are given for both including and excluding Indians in Table 11.

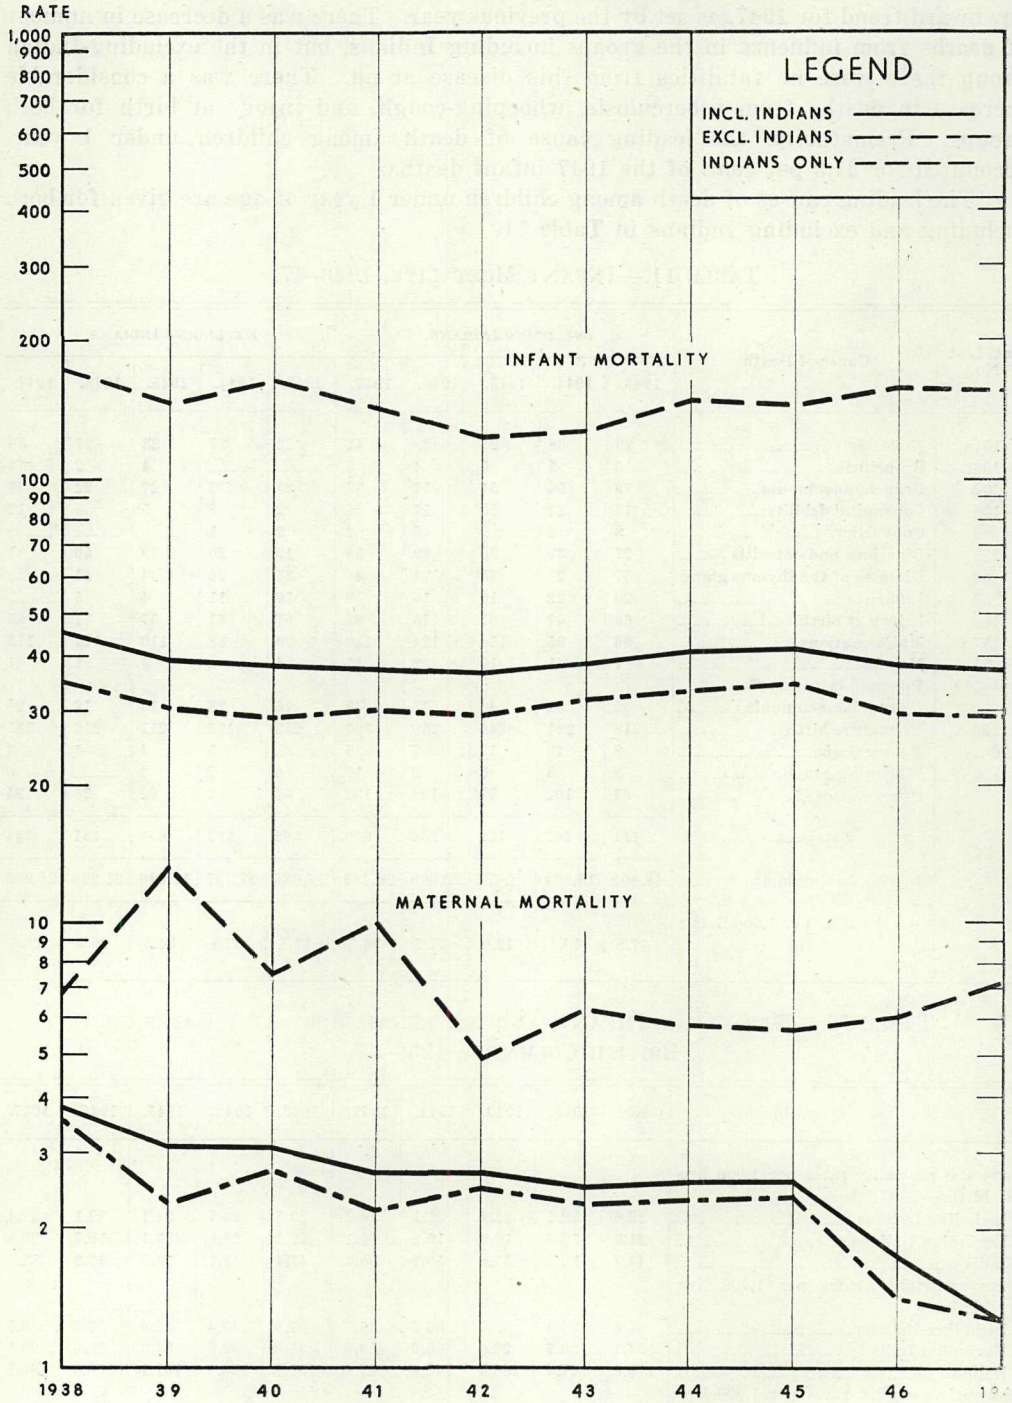
(Rates per 1,000 live births.)



MATERNAL MORTALITY.

The maternal mortality rates, including and excluding Indians, dropped to 1.2 for 1947. There were only 32 maternal deaths including Indians and 31 when Indians were excluded. The causes of maternal deaths for the period 1943–47 are given in Table 13.

MORTALITY FROM TUBERCULOSIS.

Tuberculosis was responsible for 536 deaths in 1947, a death-rate of 0.51 per 1,000 population, a slight decrease from the 1946 figure of 0.57. When Indians are excluded, the rate becomes considerably lower and stands at 0.36 per 1,000 population. The distribution of deaths from tuberculosis by the sites and organs affected is shown in Table 14.

MORTALITY FROM CANCER (INCLUDING INDIANS).

This year the number of cancer deaths totalled 1,486, of which 852 were males and 634 females. Although this is an apparent increase over last year's figures in the number of fatalities from this disease, the death-rate has again decreased slightly.

The distribution of deaths from cancer by the various organs and sites affected for the five-year period 1943–47 is shown in Table 15.

SPECIAL CLASSIFICATION OF ACCIDENTAL DEATHS.

All accidental deaths are included within the International List of Causes of Death, Nos. 169–195. However, accidental deaths described by International List Nos. 169–176, 180, and 187 are classified under those titles without regard to the nature of the injury. In order that the nature of the injury may be tabulated, a supplementary code for nature of injury has been used.

Table 16 shows special classes of accidental deaths in British Columbia, classified according to nature of injury in 1947. Included also are International List numbers. It will be noted that these include only the numbers 169–176, 178, 180–183, 185–187, and 193.

STILL-BIRTHS.

Still-births in 1947 numbered 340, making a rate of 12.9 per 1,000 live births, the lowest rate recorded in the ten-year period shown below.

Table 17 shows the number of still-births and the rate per 1,000 living births, including and excluding Indians, for the period 1938–47.

TABLE 17.—STILL-BIRTHS, 1938–47.

MARRIAGES.

The upward trend of marriages in British Columbia, as was set in the year 1944, was maintained this year, with a total of 11,852 marriages, a rate of 11.4 per 1,000 population.

Table 18 shows the number of marriages performed, by the conjugal condition of the contracting parties, and the rate per 1,000 population during the ten-year period, 1938–47.

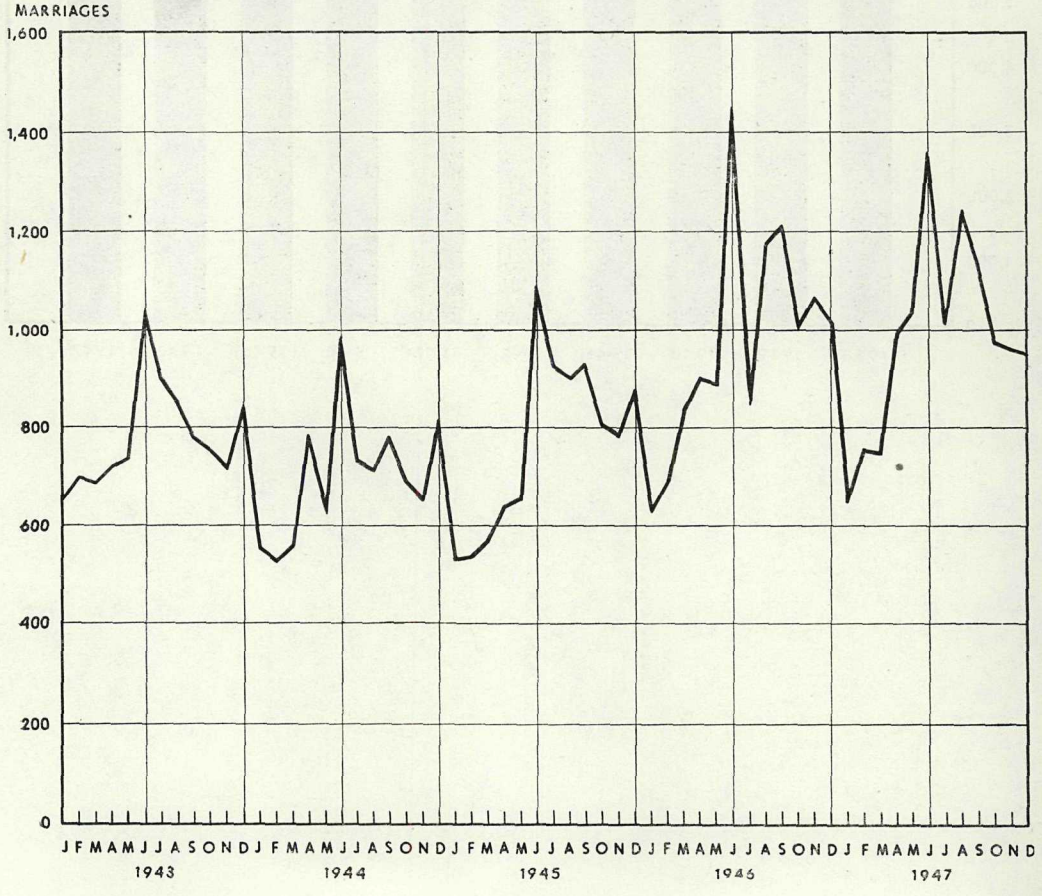
GRAPH G.—MARRIAGES BY MONTHS IN BRITISH COLUMBIA, 1943–47.



PART II.—ADMINISTRATION AND DIVISIONAL ACTIVITIES.

SUMMARY OF REGISTRATION.

Registration.—One of the principal functions of the Division of Vital Statistics is to effect accurate registration of every birth, death, still-birth, and marriage occurring in the Province. The Division is especially vigilant in ensuring that such registration is complete. To this end a number of checks have been instituted, such as the physician's notice of birth, hospital returns, school returns of children enrolling for the first time, periodic checks of marriage registers, coroners' reports, motor-vehicle accident reports, cemetery returns, and others. In order to assist the public in connection with delayed registration, the Division has, over a period of years, done everything possible to obtain early records of baptisms, burials, doctors' personal records, and other pertinent documents.

Volume of Registration.—There was again an increase in the volume of registrations handled by the Division, the total exceeding by 12 per cent. the previous all-time high of the year 1946. The following table shows the number of registrations accepted over the ten-year period from 1938 to 1947:—

TABLE 1.—SUMMARY OF REGISTRATION, 1938–47.

SUMMARY OF REGISTRATION AMONG THE ORIENTAL RACES.

CHINESE.

A total of 148 Chinese live births, 81 males and 67 females, were registered during the year ended December 31st, 1947. Of these 127 births, 71 males and 56 females actually occurred within the year 1947. The remaining 21 registrations were for births which had occurred in years prior to 1947. There were 2 still-births. Chinese deaths registered in 1947 numbered 333—312 males and 21 females. Tuberculosis accounted for 41 deaths, 37 of which were males and the remaining 4 females. Cancer was responsible for 34 deaths—31 males and 3 females. Deaths of Chinese children under 1 year of age numbered 11. Of these, 5 were males and 6 were females.

JAPANESE.

There were 65 male and 105 female, making a total of 170, Japanese live births registered during the year ended December 31st, 1947. Of these, 152—56 males and 96 females—were registrations of births which had actually occurred within 1947. The remaining 18 were registrations of births which had occurred in previous years. In addition, there were 3 still-births. A total of 50 deaths—39 males and 11 females—were registered during 1947. Tuberculosis deaths totalled 12—9 males and 3 females. Cancer accounted for 9 deaths—7 males and 2 females. There were 3 deaths of children under 1 year—1 male and 2 females.

SUMMARY OF REGISTRATION AMONG INDIANS.

During the year ended December 31st, 1947, there were 1,666 Indian live births registered. Male births totalled 865 and female births totalled 801. Included in these

figures were 6 males and 5 females who were born outside the Province. Still-births numbered 11. A total of 678 deaths—349 males and 329 females—were registered during 1947. Of these, 1 male and 1 female died outside the Province. Tuberculosis was responsible for 176 deaths—72 males and 104 females. A total of 206 children under 1 year died, 121 being males and 85 females. There were 170 marriages.

DOUKHOBOR REGISTRATION OF BIRTHS.

Since instructions were given in May, 1937, the Division, in co-operation with the Provincial Police, has continued the registration of Doukhobor births. Since then there have been 3,875 registrations filed.

Table 3 shows the registration of Doukhobor births during 1947 and the cumulative total from 1937 to 1947 by actual year of birth and sex of child.

COMPLETENESS OF REGISTRATION.

INDIANS.

Current Registration.

The marked improvement in the number and quality of registrations of Indian births, still-births, marriages, and deaths noted in the latter part of 1946 continued throughout 1947. This condition appears to be largely due to the payment of family allowance to Indians, the increased vigilance regarding vital statistics matters stressed by the administrative officers of the Indian Affairs Branch, and the payment of a commission by the Division to the Indian Agents for each statutory return filed. Due to the increased volume of work being undertaken by the Dominion Government to improve conditions generally for the Indian population, there is every reason to assume that the proper recording of vital statistics will continue to be given priority attention by the Indian Agents. Vital statistics records are so closely related to the other records of every agency that the importance of complete and accurate registration cannot be overlooked.

An excellent liaison exists between the office of the Indian Commissioner for British Columbia and the Division. Results of inspections by officials of both departments are compared and efforts can be made to remedy many undesirable situations,

thus exercising a much better control than heretofore. Inspections were made by the Division in eight of the eighteen agencies during the year.

Many difficulties still confront the Indian Agents in all their efforts to secure completeness of registration, but it is felt that an improvement in transportation and educational facilities will go far to reduce these problems in the future. The nomadic nature of the Indians and their lack of understanding of registration appear to be the basis of the difficulties presently existing.

Documentary Revision.

It had become apparent to the Division that due to a lack of the realization of the importance of Indian registration in the years gone by, many inaccuracies existed in the records, and the only practical way to overcome this awkward situation would be to compare agency copies of registrations with the originals on file in the Division and then to make whatever notations would be necessary to bring the records up to date. This work, which was commenced in January, 1947, involves a tremendous amount of checking, typing, reindexing, and similar procedures. Owing to the nature of the undertaking, only birth records are being called in at present, thereby reducing to a minimum the time that the agency copies of registrations are required at the central office. Every effort is made to reduce the amount of work as much as possible for the Indian Agents by completing forms for corrections, making notations, and preparing up-to-date indexes at the central office.

DOUKHOBORS.

Current Registration.

A special field representative of the Division, after completing a two months' course in the central office, commenced work in January, 1947, gathering registrations of Doukhobor vital statistics.

Owing to the religious beliefs of the Doukhobors, it has not been possible to achieve more than a small measure of success. The year was marked by an extraordinary number of outbreaks of violence which led to a full inquiry by a Royal Commission, beginning in October and continuing through November and December. These events had a definite effect in increasing the difficulties in securing registrations.

This remains the most serious problem in accomplishing completeness of registration in the Province. It appears that much depends on the results of the Royal Commission report as to whether or not a solution can be found.

REGISTRATION OF BIRTHS.

Except in the instances mentioned under the headings of " Indians " and " Doukhobors " and in a very small number of other isolated cases, there is no lack of proper birth registration. Though food rationing has ceased, the stimulus of family allowance has proven sufficient to ensure promptness and completeness of registration.

Much appreciation is again extended to the medical practitioners for their co-operation in forwarding notifications of births and still-births to the appropriate District Registrars, thus assisting all concerned to file registrations with a minimum of delay. Likewise, the hospitals have performed a valuable service to the Division in the submission of their monthly returns of births. Gratitude is hereby expressed to the hospital officials for the assistance they have rendered in this connection.

EFFECT OF FAMILY ALLOWANCE.

Since the inception of family allowances a most effective check on completeness of birth registration has been automatically in existence due to the desire of parents

to obtain the allowance, combined with the vigilance of the officials of the Family Allowance Branch in insisting upon prompt verification of particulars of birth. An excellent liaision exists between the Family Allowance Branch and the Division, thus bringing to light numerous inaccuracies in registration, such as fraudulent records, misspelling of names, and incorrect dates of event, in such a manner that those responsible for filing the registrations can be contacted and the errors amended. Gratitude is here expressed for the spirit of co-operation shown at all times by the Family Allowance Branch.

REGISTRATION OF DEATHS.

No difficulty is encountered in obtaining completeness of death registration, except amongst Indians and Doukhobors. However, some improvement has been noted among the former people during the past year, as Indian Agents have been made more aware of the importance of death registration. Due to expansion in the medical services of the Indian Affairs Branch and the need for statistics on cause of death, a considerable improvement may be expected in the forthcoming year.

Further improvements in a revised form of burial permit were made, and the new form was taken into general use in May, 1947. Some of the advantages of the form are as follows:—

(*a*) It reduces the amount of work required of the District Registrar.
(*b*) It is of a size and shape which make it very easy to handle.
(*c*) Each form contains complete instructions as to its own disposition.
(*d*) It provides the cemetery official with proof that registration of death has has been made, which service was not heretofore provided.
(*e*) It provides an acknowledgment to the funeral director, clergyman, and cemetery official that registration has been made, in addition to providing an excellent cemetery return; all this is accomplished in one operation.
(*f*) It provides an up-to-date record of all cemeteries in use in the Province.
(*g*) The saving in clerical time far offsets the additional cost of printing, as contrasted to that of the previous form used.

REGISTRATION OF MARRIAGES.

Registration of marriages has not presented any new problems in 1947. A certain amount of difficulty is encountered in obtaining completeness of registration of marriage of Indians, but steady improvement is being made to rectify the situation. Doukhobors most usually persist in marrying according to their own customs; consequently, in such cases, no record of the event is made. There appears to be no delinquency where the marriage is performed by a clergyman.

Completed marriage registers are checked routinely at the time of issuance of each new register. A number of old registers were located during the year, but there are still some which were issued many years ago and which cannot be located. Efforts will continue to be made to locate as many as possible.

DELAYED REGISTRATIONS OF BIRTHS.

Delayed registrations of births, totalling 960, were investigated and subsequently ordered in 1947. This was a considerable decrease from 1,209 ordered in 1946. Of the 960 registrations made in 1947, 628 were completed upon payment of a $2 fee, thus realizing a revenue of $1,256. In accordance with the Order in Council covering certificates for persons in destitute circumstances and delayed registrations for military purposes, there were 332 registrations accepted free of charge.

FRAUDULENT REGISTRATION OF BIRTHS.

Under section 13 of the "Vital Statistics Act" there were eighteen cases of fraudulent or improper registration of births disposed of in 1947, as compared to forty-seven cases that were looked into and cleared in 1946.

LEGITIMATION OF BIRTHS.

Following the marriage of the natural parents, legitimations were completed for 104 children who were born out of wedlock. After complete investigation by the Division, a substitution showing the child as legitimate from birth was filed for each case.

STATUTORY NOTATIONS ENTERED.

According to provisions made in the "Vital Statistics Act," 486 notations were entered upon registrations in 1947. Alteration of Christian or given names accounted for 110 notations, while proven errors of spelling, dates, and incomplete information constituted the remainder.

SCHOOL-TEACHERS' RETURNS UNDER THE "VITAL STATISTICS ACT."

Reports from 756 schools, including private schools, were received for the year 1946–47. The total number of children in elementary grades covered by these reports was 15,905. Of these, 11,240 were born in British Columbia, and the remaining 4,665 were born outside the Province.

A conscientious attempt was made to locate a birth registration for each child. If the registration of birth was not found under the year of birth reported by the teacher, records for preceding and following years were searched before the child was listed as unregistered.

The following table shows the results:—

TABLE 6.—SCHOOL-TEACHERS' RETURNS UNDER "VITAL STATISTICS ACT."

Born in British Columbia	11,240
Born outside British Columbia	4,665
Number registered	10,871
Number apparently not registered	369

Notices were sent to the parents of the 369 children who appeared to be unregistered. Of these, 10 were found never to have been registered, 68 were born outside the Province, 28 were registered on dates other than those reported by the school, 120 were attending school under different surnames, 8 were attending school under different Christian names, 13 were found to be Indian registrations, 96 were not heard from, and 26 were not registered for other reasons.

Further checking is being carried out by the Division by means of follow-up letters, in an attempt to increase the number of delayed registrations effected.

CHANGE OF NAME.

During the year 330 applications for change of name were granted, making a corrected total of 1,705 names so dealt with since the "Change of Name Act" was assented to on December 6th, 1940. All applicants must be British subjects, 21 years or over, and domiciled in the Province.

Section 14 of the "Change of Name Act" specifies that notice had to be filed with the Division within three months after the Act was proclaimed of any changes of name in the twenty years prior to the passing of the Act, of persons resident in the Province. Since that date 2,799 notices have been filed. In many instances,

certificates have been issued which have proved useful to people in helping to provide proof and explanation of their change of name at some date prior to December 6th, 1940.

The Division has continued to receive such notices of change of name because the Act does not limit it from receiving such notices, although it is mandatory for persons who had changed their name to file notice within a three-month period.

ADOPTION ORDERS.

Notations of adoption were made on 420 of the original birth registrations for the 509 adoptions ordered by the Supreme Court during the year. A notation of adoption is made on each original registration, showing the name of the adopted child and its parents, the date of adoption, and place of adoption. Any certificate which is subsequently issued from the document is issued under the name by adoption of the child and does not give any indication of previous status. The statistics in Tables 47 to 50 cover adoptions filed in the British Columbia Supreme Court only.

Notices of adoption and of change of name ordered in British Columbia are forwarded to other Provinces concerned, and to certain States and countries, so that suitable notations of the event may be made on the registrations of that Province, State, or country.

DECREES OF DISSOLUTION AND NULLITY OF MARRIAGE.

For the first time in some years, divorces have shown a decline during the year. Copies of decrees of dissolution and nullity of marriage filed with the Division by the Registrars of the Supreme Court in British Columbia totalled 1,880, of which 1,826 were divorces, 50 were nullities, 2 judicial separations, and 2 dismissals.

A notation of divorce is made on each original marriage registration, showing also the date and place of dissolution. Any certificate which is subsequently issued from the document contains a copy of this notation. Details of divorces pertaining to ex-Province marriages are sent to the Province of marriage, in order that the necessary notations may be made on the original marriage registration.

NOTICE OF FILING OF A WILL.

Greatly increased use has been made by the public of the provisions of the "Wills Act Amendment Act, 1945," whereby notice of the filing of a will may be made to the Division of Vital Statistics. Such notices state the date and location of the will, and a search of the notices on file can be made by the Division upon proper application. From the date of assent to the amendment, March 28th, 1945, to the end of 1946, a total of 441 such notices were filed. During 1947 more than five times as many were filed, the actual number being 2,254.

ADMINISTRATION OF THE "MARRIAGE ACT."

Administration of the "Marriage Act" is one of the primary duties of the Division. Such matters as the qualifications of persons for marriage, caveats, adequate proof of divorce, proof of age and consent of parents for minors, presumption of death, and orders for remarriage are all included in the responsibilities of the Division.

The "Marriage Act" provides that ministers and clergymen must be duly registered with the Division to be eligible to perform marriages in the Province. The recognition of a religious denomination previously unregistered under the Act often involves considerable investigation into the background of the organization, its present status, and its possible continuance. Denominations of a "mushroom" type of growth are not registered. Once a denomination is recognized, any number of applications for registration of ministers and clergymen may be made by its governing authority.

Every marriage registration is checked to ascertain if the marriage has been performed by a duly registered clergyman.

REGISTRATION OF MINISTERS AND CLERGYMEN.

The Registrar granted 252 applications for registration in 1947, an increase of 7 over the preceding year, while the number of cancellations was 149, as compared to 215 in 1946. The number on register at the end of the year was 1,500, an increase of 202 from last year's figure.

TABLE 7.—REGISTRATION OF MINISTERS AND CLERGYMEN.

	Permanent.	Temporary.	Total.
Total authorized during 1947	199	53	252

† In addition there were 4 temporaries (1 Church of England, 2 Roman Catholic, 1 Latter-day Saints).

PRESERVATION OF RECORDS.

Microfilm.—The microfilming of some 175,000 Physician's Notice of Birth cards was undertaken during the year. These physicians' notifications, which date back to 1920, have been filmed chronologically under each physician's name. The new microfilm record will facilitate reference to these notifications and will reduce storage-space required.

Current registrations are now microfilmed, and the film dispatched to Ottawa weekly for use in compiling the National Register of Vital Records, under the terms of the agreement outlined in the Report for 1945.

A start has been made on the plan to issue positive enlargements from the microfilm to replace typed certificates. A shortage of photographic paper suitable for the enlargements has delayed the inauguration of this scheme, but the supply situation has improved somewhat.

Filming of all old indexes of the Division was commenced during the year, and only the new punch-card indexes remained to be filmed at the end of the year.

DISTRICT REGISTRARS' OFFICES, ETC.

During the year the boundaries of all districts which were not reviewed in the previous year were given consideration, and, as a result, certain alterations and consolidations were made to facilitate the handling of registrations. In most cases the boundaries of the vital statistics registration districts now coincide with those of the school districts, which ultimately will be common to the health districts; in the majority of cases where the boundaries differ from those of the school districts, the variations are not sufficiently great to cause difficulty in compiling statistics for any given district.

An amended map of his own district, indicating the districts immediately surrounding it, was supplied to every District Registrar in the Province and to the office of the Deputy District Registrars.

Due to the changes involved in the redefinition of boundaries, it was necessary to prepare a revised "Guide to Cities, Villages, and Municipalities in British Columbia." This publication has yet to be printed and distributed to the various persons concerned.

At the close of the year there were seventy-three registration districts under the supervision of a District Registrar, and in addition there were twenty-three sub-offices within these districts. Forty of the District Registrars were Government Agents, thirty-five District Registrars and Deputy District Registrars were members of the British Columbia Police, and the remainder were Mining Recorders, Gold Commissioners, notaries, etc. In addition, there are eighteen Indian Agents acting as District Registrars for Indians.

Twenty-six district offices and sub-offices were inspected during the year, plus the offices of eight Indian Agencies. Although this represents a decrease over last year in the number of offices inspected, this year's programme included many isolated areas, such as the west coast of Vancouver Island, the coastal area north to Prince Rupert, the Queen Charlotte Islands, and Peace River District northward to the British Columbia-Yukon Boundary.

This was the first occasion on which an inspection had been made in any of the offices of the Peace River District and northward. As has been found in other cases at the time of a first inspection, a few details of procedure in handling registrations required correction, and these matters have received attention. The only offices in the Province which have not yet been inspected are Stewart, Telegraph Creek, and Atlin.

Inspections have proven to be very valuable from several points of view. In the first place, records are checked for completeness, and the method of procedure used in

securing registrations is reviewed in order to suggest any alterations which may be necessary. In the second place, there are usually various matters which the District Registrars wish to discuss with the Inspector but about which they are reluctant to write to the Division. Many helpful suggestions as to amendments in legislation and in procedure have been implemented as a result of conversations with the District Registrars. Inspections have likewise served to improve the *esprit de corps* between the District Registrars and the central office. Invariably it has been found that where inspections have been made without an excessive lapse of time between them, the work is well handled and its importance is realized.

During the year all index registers, covering the period 1872–99, inclusive, were recalled to the central office for checking in order to assure agreement between central-office records and district-office records. Registration of births, deaths, and marriages commenced on September 1st, 1872, but in hardly any instances were copies of records kept in district offices until July, 1899. At the inception of registration a memorandum entry was made by the District Registrar in an index-book, but as returns were only made to the central office after lengthy intervals, it was found in checking the old index-books that a number of original registrations were not on file. All such registrations have now been properly recorded.

Following inspections, a considerable amount of binding of District Registrars' copies of registrations was undertaken, as experience has shown that where copies are preserved in permanent binding there has been no loss, except through fire, of any records. Practically all outstanding work in this connection has now been completed, so that future work will consist of binding current records only. It has been found preferable to have all registrations sent to the central office for checking prior to binding, as many original registrations, which were not on file in the central office, have been discovered in this manner.

MECHANICAL TABULATION.

Continuous use was made of the mechanical equipment of the Division during the year, both for routine monthly tabulations and indexes and for special assignments. The work of retabulating all the birth indexes of the Division by year of occurrence was concluded, and the new indexes placed in service. Revision of the death indexes in a like manner was commenced and carried back to 1925. Preliminary work on revision of the marriage indexes was also begun. Considerable use was made of the equipment in connection with the work done for the National Register of Vital Statistics referred to above.

Alphabetical and numerical indexes of known cases of tuberculosis and indexes of tuberculosis dead cases are now revised and retabulated annually for the central office of the Division of Tuberculosis Control. A special index of known cases of tuberculosis amongst the Indian population was prepared for the Department of Indian Affairs, Coqualeetza. Additional requirements of the Division of Tuberculosis Control were met by virtue of the mechanical processing of records. The punch-card method was instituted during the year for the follow-up reports of tuberculosis cases discharged from sanatoria, and statistical analyses will thus be available for this phase of the tuberculosis programme.

VITAL STATISTICS COUNCIL FOR CANADA.

In May the Vital Statistics Council for Canada met in Ottawa for the third time. British Columbia was not represented because of the sudden illness of the Director while *en route* to attend the Council meeting. The Council is proving to be very worth while, as it permits an opportunity to discuss many matters and tends to keep its members up to date. Definite advances in all aspects of registration of vital statistics have resulted since creation of the Council.

MODEL MARRIAGE ACT.

Considerable discussion followed a report by a committee to study the Marriage Acts of the various Provinces. As a result, the committee was instructed to continue its work, with the intention of submitting a proposed draft model Act to the next meeting of the Council.

THE INTERNATIONAL LIST OF DISEASES, INJURIES, AND CAUSES OF DEATH.

The International Committee for the preparation of the sixth decennial revision of the International List of Diseases, Injuries, and Causes of Death made very definite progress in its recommendations to the Interim Commission of the World Health Organization.

It is expected that the sixth decennial conference will be held in Paris in the spring of 1948. The list, together with an alphabetic index and tabular list of inclusion terms, will be available shortly thereafter.

An excerpt from the report to the Council indicates what the new International List will mean to the Provincial Bureaus of Vital Statistics: " In the first place, those engaged in public health statistics programmes will be able to use one classification list for coding causes of death, causes of illness, causes of still-birth, hospital admission by cause, orthopædic impairments, and other factors such as prophylactic inoculations, blindness, and deafness. Others will find it possible to obtain mortality statistics of greater public health significance, which will have greater comparability with morbidity statistics than was possible in the past. On the other hand, those using the classification for mortality statistics only will find quite a few categories which are important as causes of illness but not of death."

MODEL VITAL STATISTICS ACT.

Discussion indicated that the Provinces of Saskatchewan, Ontario, New Brunswick, Nova Scotia, and Prince Edward Island were contemplating new legislation with regard to vital statistics. For this reason the Council passed a resolution requesting that the Minister of Trade and Commerce be requested to call a joint conference of the Council and the Legislative Counsels of the Provinces in the fall of 1947 for the purpose of studying the provisions of a uniform Vital Statistics Act for the nine Provinces. On December 1st a conference was held in Ottawa. A submission was prepared by the Division and forwarded to be read at the conference. To date the verbatim report has not been received, and hence no comments can be made regarding the principles adopted by the conference.

NATIONAL REGISTER OF VITAL STATISTICS.

Details of the plan for the establishment of the National Register of Vital Statistics, and terms of the agreements between this Province and the Dominion Bureau of Statistics effecting this important undertaking, were outlined in the report of the Provincial Board of Health for 1945. The passing of Federal legislation implementing payment of family allowances in Canada from July 1st, 1945, has made the early operation of the proposed National Register of paramount importance. The Register has been functioning during the year for all current registrations received. It is compiled in Ottawa from microfilm copies of the registrations, which are forwarded regularly from the Provinces.

For family-allowance purposes it was necessary that the Register include all births and deaths from 1925 onward. One of the major problems that had to be solved concerned the system of allotting to each vital statistics registration filed in the Province since that date a standardized ten-digit identity number, which would be mutually exclusive, yet which would provide an immediate reference to the location of the registration. By the end of 1947 all the difficulties of the numbering sequence had

been satisfactorily dealt with, and the entire backlog of birth registrations to 1925 had been microfilmed and sent to Ottawa.

The second phase of the National Register project required that the birth identity number be put on death registrations for all decedents born since 1925. For such persons born in British Columbia this involved searching the birth records and establishing positive identification of the decedent with the associated birth. For persons born outside the Province it was necessary to request the birth information from the Province concerned or from Ottawa. When this searching was completed and the birth identity numbers entered on the death registrations, it was necessary to punch the required birth information on the Dominion Bureau of Statistics death index-cards, which had been reproduced from the existing British Columbia cards. By the end of the year all the searching was completed and the first four years of completed death index-cards forwarded to Ottawa.

The ultimate aim of the National Register is that it should become in effect the "book of life" for each person enumerated thereon, bringing together the facts of all the vital events of his life. Such a co-ordinated record will be of great value in demographic studies and will provide information essential both to efficient social-security measures and to the individual himself.

LEGISLATION.

The Election Act.

This Act was amended to provide for the setting-up of a master file containing a record of all persons registered as voters, the file to be maintained in an office called the "Central Registry of Voters." Under this amendment the Director of Vital Statistics is required each month to submit a list bearing the name of each person of whose death he has received notice during the period, or who has changed his name under the provisions of the "Change of Name Act," or, in the case of females, who has changed her name by reason of marriage or of a decree of divorce or nullity.

PLASTICIZED BIRTH CERTIFICATES.

Early in the year laminating equipment was installed and the issuance of plastic birth certificates was commenced. This new service offers the public a plastic certificate in a wallet-sized card which is tamper-proof, durable, and, in particular, very convenient. The new certificates contain a minimum of information sufficient to establish proof of age, which meets all normal requirements for birth certificates. The old-type certificates, showing details of parentage, are still available on request.

Plastic birth certificates are issued routinely by the central office of the Division at Victoria but, due to the amount of equipment required, are not available from any of the District Registrars' offices. The fee is the same as for the old-type certificates.

GENERAL OFFICE ROUTINE.

In 1947 the volume of correspondence remained close to that of the previous year. Letters received by the Division totalled 46,137, compared with 46,732 in 1946. Letters sent out numbered 50,344, compared with 50,823 in 1946.

In 1947 there were 22,682 ordinary revenue-producing searches costing 50 cents, while the total Province-wide searches costing $2 were 83. Revenue collected in the central office of the Division in Victoria under the "Vital Statistics Act" amounted to $30,051.76, as against $31,166.29 in 1946. In addition, $4,842.50 was collected under the "Marriage Act," compared with $5,155 in the previous year. The total revenue for the central office was $34,894.26. The comparable figure for 1946 was $36,321.29.

The total revenue collected for the whole Province for the calendar year 1947 amounted to $92,240.50, compared with $93,397.25 in 1946. The amount collected under the "Vital Statistics Act" totalled $41,385.50, as against $42,250 in 1946. Under the "Marriage Act" $50,855 was taken in, compared with $51,147 in the previous year.

PART III.—DETAILED TABLES OF BIRTHS, DEATHS, MARRIAGES, ADOPTIONS, AND DIVORCES IN BRITISH COLUMBIA, 1947.

(Classified by Place of Residence.)

TABLE 1.—GENERAL SUMMARY OF BIRTHS, DEATHS, AND MARRIAGES IN BRITISH COLUMBIA, BY CENSUS DIVISIONS, CITIES, AND VILLAGES OF 1,000 POPULATION AND OVER, BY PLACE OF RESIDENCE, 1947.
