# THE ATLIN CLAIM.

VOL. 12.

ATLIN, B. C., SATURDAY, JANUARY 28, 1905.

NO. 289

## Mining Development

(Continued from last issue.)

### Boulder Creek.

Let us now take a leap over the mountains, and cross Pine Creek, and note what Boulder Creek can show for 1904. A short creek—it holds its own among the four largest gold-producing creeks of the Camp. The property of the Societe Miniere de la Colombie Britannique,—Henry Maloin, manager,—produced the most gold of any property in the Atlin District; it is worked both by drifting and hydraulic, the drifting method proving the most lucrative. In November, 1903, Messrs. J. H. Black and W. Pollard Grant took a lay for a term of years on the lower property of the company, and struck rich pay in a shaft sunk 60 feet deep. A large force of men was put on and the mine opened up, and under the able management of J. H. Black, the results have been signally successful. As an indication of the extent of the workings in nine months, 45,000 cubic yards of gravel were moved, of which 15,500 cubic yards were elevated and sluiced, from which \$60,000 was won. In eleven months work they have earned \$74,000, the largest amount won from any single operation in the District. To give an idea of the timber used, the management state that their steam hoist consumed 700 cords of firewood and the mine used up 2,600 sets of timber and 25,000 lagging. On the company's property, hydraulic mining was also engaged in, under the superintendence of Mr. Joseph Fall, which brought the total yield close on \$90,000.

Above the hydraulic company, the creek bed and benches are being worked out in smaller areas by the placer miner. Sixty men were at work during the year and were more or less satisfied with results.

### McKee Creek.

As McKee Creek comes next in order of production, and stands first for successful hydraulic mining, we will have to cross country fifteen miles and see what the Company has done—for the greater part of McKee Creek is now in the hands of the Amalgamated McKee Creek Co.,—Mr. C. M. Hamshaw, manager. This company has acquired the interests of the Atlin Mining Co. and the McKee Creek Consolidated Co. In a successful season's mining, they uncovered 8,000 square yards of bedrock, the gravel yielding \$12,000 in gold. Including the yield of ground let on lays, the company report an output of \$52,500. To more economically work this property, the management propose to install a steam or electric shovel plant, construct an electric tram line to Atlin Lake, 2½ miles distant, and there, with the

unlimited dump and supply of water available, wash the pay gravel. The scheme is a large one, but the known area of pay is large, and if the results at all reach the anticipation of the managers, the expenditure will not be wasted.

Above this property, development work was carried forward on the Ware leases, purchased by the McKee Creek Consolidated Co.,—Mr. J. H. Manshaw, manager. Flumes and waterways were constructed and prospecting work done. There have never been any failures on McKee Creek, and 1904 was no exception to the rule,—the individual miners working doing particularly well.

### Birch Creek.

Returning to the Pine Creek Valley, we will take a look at Birch Creek, where, in previous years, the Atlin Lake Mining Co. has been "up against it." The company is now under the management of Mr. Bryan Williams, whose close application to business and ability to take advantage of local conditions, resulted in a more encouraging season for the mine than in any previous year. This company has to study economy, as Birch Creek is a small creek. The flow of water rapidly lowers as the snows melt and it is impossible to put any large yardage of dirt through the sluices in the season. Notwithstanding this, 30,000 cubic yards of gravel were washed and \$12,000 won in last summer's work. Besides this company, there were twenty placer miners working, the largest number since 1899.

### Otter Creek.

The same conditions are found on Otter and Wright Creeks. Otter Creek is passing through the initial years which the inexorable fates decree for every mining proposition. On upper Otter Creek, the Otter Creek Hydraulic Co. completed the installation of a very complete plant and did a lot of work opening up the mine. We hear that the plant may be operated next season under the management of Messrs. Carmichael & Moran, who were signally successful in their prospecting operations in 1900, 1901, and 1902.

### Wright Creek.

On Wright Creek, Messrs. Davis, Gierke, Hodges & Kershaw have done particularly good work in opening up the ground owned by the English Counties Hydraulic Syndicate,—C. Dubois Mason, manager. This partnership have installed a small hydraulic plant, which includes an automatic cable-way for handling stones; great ingenuity is displayed in the construction of this device, which has proved a great labor saver. The boys have struck good prospects, and when they reach bedrock with their bed-rock flume, should make a good thing for themselves and owners.

## New Ground Opened Up.

### Ruby Creek.

In the Pine Creek watershed, the successful prospecting carried on by the Ruby Creek Mining Partnership, Ltd., on Ruby Creek, is deserving of special notice. This local syndicate has expended a large sum of money in prospecting their property. Operations were in charge of Robert McKay. An open cut, 200 feet long, was made, the upper end being 20 feet deep, and at that point a shaft was sunk and bedrock struck at 47 feet from the surface. From the bottom of the shaft a cross-cut was driven 40 feet in length. The results were satisfactory to the syndicate, for they found a stratum of pay gravel 25 to 30 feet in depth and the cross-cut as far as driven, failed to reach its limits. This is, as far as we are aware, the deepest deposit of pay gravel as yet discovered in the District. Ruby Creek has a heavy grade and large volume of water.

### Snake Creek.

Snake Creek, a small creek, with extensive deposits of placer material, flowing into Pine Creek just below Otter Creek, has been taken up in leases and surveyed. We hope that the property will be prospected this coming season. Snake lies in the heart of the district, and gold has been found by the pan prospector.

### New Territory.

The O'Donnell River System, the largest river in the Atlin Lake Watershed, came into prominence in 1904, through the exploratory works of the O'Donnell River Syndicate,—Mr. Robert McKee, manager,—and the Bull Creek Hydraulic Dredging Syndicate,—A. Carmichael, manager. These two syndicates deserve the success they attained in their prospecting work, as they branched out into new territory, recognized by most as outside the gold bearing zone. These syndicates built their own roads and trails, and transported lumber and supplies to make it possible to test the gravels of Bull Creek and O'Donnell River on a large scale.

To indicate what has been done over in that country, we may say that the Bull Creek Syndicate built 2,500 feet of ditch—capacity, 300 miner's inches,—and 400 feet of bedrock flume; it has 4,500 feet of loose lumber on the ground, and washed 10,000 cubic yards of material and cleaned 585 square yards of bedrock. We hear that New York capital has taken over these properties and prospecting work will be actively prosecuted this coming summer.

### The Latest Discovery.

Consolation Creek, whose source is in the same range as that of Boulder and Ruby, but which flows into Gladys Lake, in the Teslin watershed, was prospected last summer by O. C. Solt and J. M. Buchanan, who staked discovery on September 14th. A stampede followed. Miners working there now speak with confidence of the future of that District.

In closing this article, The Claim wishes to thank those who gave us the information that made this report possible. We have tried to treat the subject impartially, and if we have succeeded in this presentation of things as they are, in strengthening the confidence of our citizens and friends in the resources of the Camp, its object will have been attained. Quartz and Magnesite will be dealt with next week.

## Spruce Creek News

(By Our Correspondent.)

Among those of the miners on Spruce Creek who are working with little or no pay, but who confidently bank on the future, and expect time and persistence to right all things, none are more worthy of mention than Pete Besney and Chas. Bradstreet, who are working on No. 5 above discovery, Spruce Creek. These men have three times failed to reach bedrock, because of water, and now are sinking in solid rock outside the creek channel, expecting to go fifty or sixty feet deep and then drift beneath the channel and up through the bedrock into the pay supposed to be there. Pete and Charlie should have their rewards on earth, and not have to wait for heaven.

Twenty-eight persons responded to the invitation to play a series of whist games. The following is a complete list of the players and their standing at the present time:

J. McKechnie, 1,000	Z. Burke, 775
Walter Sweet, 900	W. C. Small, 700
A. G. Bruce, 908	A. Peterson, 743
Mr. J. Raeburn, 881	T. Fleming, 712
M. McKeown, 809	Mrs. J. R. Bennett, 733
Chas. Hickman, 890	J. Clark, 725
H. Bennett, 812	O. Beverly, 716
R. Foley, 833	R. Alexander, 700
L. Thomas, 807	O. Miller, 700
Mrs. Sedgwick, 858	Mrs. J. Giffard, 678
T. White, 792	J. McKinnon, 675
Mrs. J. Gray, 787	H. Strange, 650
J. Blinburg, 789	J. Carrow, 605
J. Hinman, 775	E. E. Bennett, 572

In future, the leading ten players and their standing will be given only. This will give those of the players who are not lucky, a chance to escape without seeing their names near the foot of the list.

Mr. James Clark, the well-known proprietor of the Half-Way Hotel, has removed from his accustomed place at that establishment, to Spruce Creek, where he proposes mining for the next few months. Jim's trip outside is therefore put off until next year, when he hopes to get further away than he has yet managed to do during the past five or six years.

In the Claim issue of Jan. 7th, an error was made in the article written from Spruce Creek, for which that correspondent wishes to beg the pardon of Sam Johnson, proprietor of the Vancouver Hotel in Atlin. It was stated that Dick Dunlap provided a way for several Atlin ladies to attend a dance on Spruce, whereas he had nothing to do with it, except to request that he be specially mentioned. As it was, Sam Johnson should have had the credit.

## Leases Cancelled.

Notice that the following leases have been cancelled has been posted on the Government Board this week.

NAME OF LEASE	APPLICANT	LOCATION

### Atlin-Juneau Road.

The public meeting to be held at the Court House, Thursday evening, to consider the proposed Atlin-Juneau Road, promises to be one of great interest. This road to the coast is seriously and favorably considered by many intelligent people in Atlin District as the most practicable and only natural solution of the mail and transportation problem. We suggest that a black-board be used on which a sketch can be made of the country through which the road will run. This map could then be used to show the different routes proposed, and will present the matter in a way easily understood by all.

The following report was given at the meeting of the Board of Trade held last Monday night, and, with additional information, will be presented at the public meeting next Thursday:

ATLIN, B. C., Jan. 20th, 1905.  
 To the President of the Board,  
 Sir:—We, the Sub-Committee of the Council, appointed to enquire into and to report on the possibilities of putting a wagon road through to the Coast by way of Taku River, and the benefits such a road would prove to this Mining District of Atlin, beg to report as follows:

We have gone carefully and fully into these matters and, after due consideration of all information it has been possible to collect, conclude that the project is not only feasible but that no natural obstructions present themselves; and taking into consideration the facts that such a road would put Atlin in direct touch with salt water, would cost less than that proposed two years ago—north from Atlin via Tagish to Car Cross,—would develop the southern part of British Columbia to the south and east of Atlin, and would lie wholly within the borders of the Province, we cannot overlook the fact that such an undertaking would be a benefit to other parts of the Province as well as to our own District.

Since its inception, this Camp has suffered from having only one outlet, viz.:—the lake and railway system to Skagway. During eight months of the year this is closed to the District, except by negotiating the dangers of lake travel in open boat or the greater perils of ice travel in the early winter and spring to connect with the W. P. & Y. R. R. system at Car Cross or Log Cabin. Much danger to life, delay of and damage to mail and express matter, delay of passenger travel through the unsafe condition of the ice and impassible state of the trails, has always to be coped with year

after year, to the annoyance and expense of all concerned, and it is a matter of Atlin's history that mail carriers and others have sacrificed their lives whilst in the discharge of their duty. That something should be done to remedy this state of affairs, all are agreed, and this southern route commends itself to us on the following grounds:

It will afford easy approach to Atlin and surrounding country at all times of the year. It will bring Atlin nearer steamboat communication on the Pacific by one-third of the distance via Car Cross and the White Pass system. It will be an all-year route and consequently will enable men working placer ground to conveniently continue operations at least thirty days longer in the fall than at present when they have to close down about the third week in October in order to catch the last boat leaving Atlin—early in November.

Such a road will materially lessen the cost of all staples, particularly on smaller mining machinery suitable for individual workers and will relieve the merchants from the compulsion of laying in enormous stocks of provisions, etc., in the fall, to carry them over the winter, thus more evenly distributing their freight expenses.

It will provide means of an uninterrupted mail and express service; damage to such would be obviated and danger to life would be reduced to a minimum, since lake and ice travel would be eliminated.

It would provide facilities for handling the average ores in the Camp, upon which sufficient work has been done to demonstrate the possibility of working the same under more favorable circumstances than those at present existing.

In spite of all the drain on this Camp since its commencement, the drawbacks under which it has laboured with regard to freight rates, that it has been side-tracked in its communication with the coast and used as a feeder to a foreign system, instead of being in touch with ocean traffic, the Camp has shown a vast increase in its placer output and steady progress in the quartz development. That the life of the Camp is not one of short duration, but will be for many years to come a gold producer, and consequently an important source of revenue to the Province, is indicated by the constant discoveries of ancient channels and gold bearing gravels of vast extent.

The construction of such a road in the direction proposed would open up a great portion of the Province hitherto untouched and which is known to carry gravels and mineral deposits well worth mining men's attention.

The country through which this road would pass resembles very much that of the Atlin District itself, of which the Mining and Engineering Journal says, that, the roads in that part of the Province cost less than in any part of Alaska to build and maintain. Little bridging would have to be done, as the streams are small. There is abundance of good timber, and eight miles of the already constructed McKee Creek road would form part of the proposed road.

The distance approximately from

Our Goods are the Best and Our Prices the Lowest.

Atlin to the Boundary Line would be about eighty miles, possibly less. The road certainly would not extend all that distance if steamers could reach a landing within the Canadian Boundary, as is reported. In conclusion, we would point out that this is really the natural gate to this portion of the Province from the sea and that more than once this said route has been contemplated for a railway route, and that in 1899 a pack-horse trail was cut from the head of canoe navigation to the Silver Salmon Lake, a distance of some thirty miles from Atlin.

We would further suggest, sir, that a public meeting be called at the instigation of the Board, through the Government Agent, to present this matter to the residents of the District, and a petition be circulated through the District, urging the construction of the road upon the Government, through our Member, Dr. H. E. Young.

COMMITTEE OF COUNCIL.

### A Safe Deposit Vault.

Mr. Jules Eggert, Atlin's up-to-date and enterprising jeweller, has had constructed, at the rear of his Atlin store, a fire-proof safe deposit vault, for the safe-keeping of valuables,—for his own use and for the convenience of any one who wishes to rent space. The vault is 6 x 6 and 7 ft. high, fitted up with shelves, and has solid cement walls 18 inches thick, with regular combination door outside and double steel door inside. In a country such as this, where fires are so liable to occur, the construction of a fire-proof safe deposit vault fills a much-needed want and will be appreciated by all wishing to store valuable papers, etc. This is the only safe of this kind between here and the coast.

Ottawa, Jan. 25th.—The Ontario election returns give 65 Conservatives and 30 Liberals, and 2 polls to hear from.

## PORTRAIT GALLERY

If you want to have the portrait taken of yourself or children,—we shall try and please you.

A Fatal Accident.

The saddest accident in the history of Spruce Creek occurred last Saturday morning, when James Keane, a miner on Spruce Creek, was crushed to death by the falling of a set of timbers. In an effort to locate the bedrock beneath where his timbers were supported, he loosened the set, causing it to give way and, the entire set coming down, caught him as he was almost out of harm's way, killing him almost instantly. Jimmie has many friends in the Camp and especially on Spruce Creek, where perhaps he is best known, who will miss him for many days to come. He was about 24 years of age, a native of Ireland, and had been in this Camp about two years. The funeral took place from Pillman's Undertaking Parlors on Thursday afternoon, to the Atlin Cemetery, and was attended by a large number of miners from the creeks and business men from the town. The pall bearers were: John Malloy, John Corman, Wm. Conroy, Bryan, Nat. McEwen, Z. Barke.

and there, much to their surprise, met with defeat—13 to 8. On Saturday, 15, conquering team—Messrs. Gilmore, Stewart, Webster and Wasson, journeyed to Atlin, but knew the home team could hold their own—scoring 14 to 9.

The third round for the Petherstonbough Cup has been drawn and the following pairs are competing against each other:

Death of Dr. W. Mitchell.

We regret to announce the death of Dr. W. Mitchell, which occurred at Vancouver on the 13th inst. By this event Atlin loses one of her earliest pioneers, the Doctor having been one of the first to reach the goldfields on their discovery being made known. At that time Dr. Mitchell was medical officer on the S. S. "Tartar," then running on the Vancouver-Skagway route during the Klondyke rush of 1898. He held many interests in both placer and mineral in this District, and last summer opened up and concentrated his energies upon the development of "The Hermit" mineral claims of Taku Arm.

Dr. Mitchell was a Canadian by birth, having been born in Quebec 37 years ago, and from there passed to Cambridge University. His medical training was completed by a term as surgeon in Guy's Hospital, London, and his skill was employed in many instances which will be remembered with gratitude in this Camp. The Doctor had been in his day the acknowledged best full-back Rugby football player in the world, having played for all-England for three years, and was a general all-round athlete.

Dr. Mitchell's sturdy figure and pithy conversation and his kind and genial disposition will long be remembered by his many friends and acquaintances here and elsewhere.

Curling.

A very interesting curling match took place between Discovery and Atlin last Friday and Saturday. On Friday, four of Atlin's crack players, Messrs. Stables, Dowling, Ross and Woods, journeyed to Discovery
