OFFICIAL ORGAN.
The British Columbia Record is the official organ of The Architectural Institute of British Columbia, federated with The Royal Architectural Institute of Canada, and The Engineering & Technical Institute of British Columbia, and as such is used by them as the medium through which to make their official announcements to the general public.
By such selection the British Columbia Record is not wise pledged to editorially support of any policy advanced by these societies, but maintains an absolutely independent position on all matters subject to editorial opinion.

CINDER CONCRETE STANDS HARD TESTS

It is claimed by those who favor the more general and extensive use of cinder concrete that as it has proved itself capable of successfully supporting great weights and withstanding unusual strain and stress when used in floors, there are no valid reasons why the same material cannot satisfactorily replace other and heavier materials used in wall construction.

The advantages of cinder concrete construction, it is said, will be many, chief among them being a great saving in dead load in the walls of buildings, thereby affecting a great saving in the cost of steel structures. A plan which has been proposed, and which may be tried on a projected building in this city before long, contemplates pouring the concrete floor and walls of the story immediately beneath, as one operation. It is proposed to weather proof the walls with a coat of gunite, after the method used by the cement gun companies on a great number of important structures throughout Canada and the United States. The use of this material will result in thoroughly sealing up every void in the concrete and allow any finish that the architect may desire.

Cinder concrete is no longer in the experimental stage. Its fireproof and weight-carrying capacity are no longer

Bevelling and Silvering

questionew. Cinder concrete walls of a test house erected at the Columbia University testing station, in Brooklyn, have stood an experiment lasting over forty hours, divided into four-hour periods, during which they were subjected to heat 1,700 degrees Fahrenheit, followed by an immediate application of cold water from a high pressure main. These walls were constructed by two Columbia undergraduates during their vacation and the tests were conducted under the direction of Ira H. Wilson, engineer of the National Board of Fire Underwriters, and Prof. James H. McGregor of Columbia University. These walls are believed to have stood a greater fire and water stress than any walls ever tested.

Cinder concrete has the advantage of being much cheaper than other forms of concrete and vast quantities of its component parts have been daily going to waste in the past when its use was chiefly restricted to sidewalk construction. In recent years, however, cinder concrete floors have been used in hundreds of important buildings with complete satisfaction.

MINING

Several copper claims have been located 35 miles northeast of Lac la Hache, also at the head of Gun creek. A branch railway may be built from the P. G. E.

The Molly Gibson, near Paulsen, has resumed operations. Ore will be taken out when the wagon road is in

condition. Most of the stock in this company is held in Rossland.

A steadily increasing pile of zinc concentrates is piling up at the Rosebery plant of the Rosebery-Surprise Mining company in the Slocan, due to the fact that things are at present not favorable for the profitable marketing of a zinc product.

The outlook in Sandon for the season is regarded as being very favorable. With the going of the snow, activity is increasing in all directions and many inquiries are being received from outside points with regard to mining prospects and properties.

The tramway of the Wonderful mine, near Sandon, is in shape and was given its initial tryout last week. It is about half a mile in length and has one span of over a thousand feet in length without a tower, probably one of the longest spans in the district.

PROVINCIAL NOTES.

Prince Rupert—A small addition is being constructed to the group of provincial government buildings to make room for the offices of the forestry department. The cost will be about \$1,500.

Say things that you know to be true—and don't forget to prove them!

NEW WORK -- CONTRACTS LET

THE FOLLOWING TABLE SHOWS BUILDINGS COSTING \$5,000 OR OVER, ON WHICH CONSTRUCTION IS UNDER WAY, OR OF WHICH CONTRACTS HAVE BEEN LET BUT CONSTRUCTION NOT YET STARTED.

GAS HEAT YOUR BUILDING
Gas heating by means of a system like the Rector has been the dream of engineers for years.
It does away with dirty, smoky furnaces, dusty basements filled with fuel, and the necessity of constant stoking.
Each radiator is a unit—you can cut as many of them out as you wish. You pay for your gas after you use it, not as you pay for coal in advance.
We will be glad to give you figures on a gas-heating installation.

URGE CONGRESS TO COMPLETE ALASKAN R. R.
Washington—early completion of the Alaskan railroad to the navigable waters of the interior is necessary for the success of the entire railroad construction program in the territory undertaken by the government, according to J. L. McPherson, engineer of the Alaskan engineering commission.

"The success of the entire project," Mr. McPherson told the house appropriations committee in requesting funds for pushing construction work "is dependent on its early completion to the navigable waters of the interior. This is necessary to make it possible for these pioneers in the interior to build homes and industries and attract other pioneers to that region.

The engineer said 252 of the 437 miles of new work had been done on the line and that when joined with existing lines the connected rail mileage of territory would total 545. Large amounts of grading and other work also has been done on the unfinished part.

"In order that construction work may not be temporarily interrupted the house approved an appropriation of \$1,954,350 for the work in the general deficiency bill sent to the senate. The present force of 1500 men will be doubled this month.

1298. Wire nails.—A Liverpool firm wish to get into touch with exporters of wire nails.

1299. Mica.—A Rotterdam commission merchants is desirous of securing an agency for the sale of Canadian mica in Holland.

1302. Boots and shoes.—A manufacturers' agent in Cape Town, South Africa, would like to get into communication with Canadian manufacturers of boots and shoes with a view to development of trade in outh Africa.

1304. Electrical and motor accessories.—A British firm wish to get into communication with Canadian manufacturers of electrical and motor accessories.

1305. Representation.—A New Zealand commission merchants now visiting England would like to get into communication with Canadian manufacturers desirous of representation.

1306. Cedar sticks.—A firm in London, England, require cedar sticks in lots of 100 gross and upwards. One set of samples of the sticks required has been received by the Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa.

1308. Glass.—A distributing business agency in St. John's wishes to be put in communication with a Canadian manufacturer of glass.

1309. Wood-working machinery.—A Government organization in Siberia are desirous of receiving prices and other particulars for machinery for cleaving and sawing wood, such machines to be supplied with saws suitable for logs from 21 to 28 inches and to be worked by oil or gasoline engines.

1311. Stationery, musical instruments, etc.—A firm in Siberia wish to get in touch with Canadian firms in a position to supply the above.
