The Big Store

What Shall I Buy For Christmas ?

A FEW SUGGESTIONS FROM OUR DIFFERENT DEPARTMENTS MAY AID YOU IN YOUR SEARCH FOR A SUITABLE GIFT.

FOR A LADY

A PAIR OF KID GLOVES
Ask for the famous "Reynier" brand. The most stylish.

SOME SILVERWEAR
is always acceptable. Rogers' famous "1847" make lasts a life-time.

A DAINTY HANDKERCHIEF
We have some in Japanese silk with lace border.

A CARPET SWEEPER
The "Bissell" makes sweeping easy.

A CENTER-PIECE
Appeals to every woman. Especially a "Battenberg."

A SILK FASCINATOR
A special line in silk and white.

A PRETTY TIE
Something in Chiffon and Lace, or Silk and Lace.

FOR A GENTLEMAN

A "GILLETTE" SAFETY RAZOR
Makes shaving a pleasure.

A HANDSOME CARVING SET
An English made set is always the best.

A GOOD POCKET KNIFE
An "I.X.L." or "Boker" is the correct thing.

A PAIR OF HOUSE SLIPPERS
Something in leather or felt.

A CASE OF HANDKERCHIEFS
Containing six fine linen ones. A most useful gift.

AN ASCOT OR DERBY TIE
We have some special Christmas patterns

A PAIR OF GLOVES
Our Silk and Mohair lined gloves are unequalled.

With Compliments of The Season

To your relatives or friends, send a piece of our beautiful CUT GLASS or SILVERWARE, it is sure to be prized by the recipient, and carries with it abundance of esteem and affection.

TO ALL

The Residents of the district, are requested to call and see what beautiful designs we have in plated and solid SILVERWARE fresh from the factory. If you don't wish to purchase, CALL ANYWAY.

A. LOGAN & CO.

GREENWOOD

MIDWAY

WEDDED NEXT WEEK.

Dr. S. S. Oppenheimer left yesterday for Spokane. On the 14th inst. he will be married at the Hotel Spokane to Miss Dorothea Fisher. The bride is well known in this city. She is a daughter of Mr. and Mrs. A. Fisher, formerly of Greenwood, but now residing at Colfax, Wash. Miss Fisher and her sister, Mrs. Julius F. Ehrlich, came here with their parents in the early days and both grew to womanhood in the city. Miss Fisher was popular in social and musical circles and her many Greenwood friends will welcome her back. After the marriage ceremony, which will be witnessed by immediate friends, a banquet will be held in the Silver Grill. The honeymoon will be spent in the coast cities.

Dr. Oppenheimer is one of the old-timers in Greenwood. He came here shortly after graduating at McGill, and has always enjoyed a large and lucrative practice.

The happy couple will return to Greenwood about the end of the month and will begin housekeeping in the Fisher residence, which is being fitted up for them.

The Times joins their many Greenwood friends in anticipating the happy event by extending congratulations.

During Dr. Oppenheimer's absence his practice will be looked after by Dr. Spankie.

Boys, get next! Rubber the hockey sticks, pucks, skates, mug and calf protectors, for you will soon have your winter "skates" on. The O I C Second Hand Store. A. L, White Co., phone 16.

Most of the mountain ranges of Central New Mexico are high tilted blocks, one side being a long slope and the other a steep face, originally a fault scarp. In the steep face a considerable portion of this basal part is often found to be made up of quartzites, micacious and hornblende schists, gneises and granites. The foliation of these highly metamorphosed rocks is usually nearly vertical.

By trap rock is meant fine grained basic igneous rocks of dark color and crystalline texture. Most trap rocks are either fine grained basalts, diabases diorites or gabbros. When the true nature of a rock has not been determined the term "trap" is often given it. The palisades of the Hudson river, the Giant's Causeway of Ireland and Fingel's cave of Scotland are familiar examples of trap rock.

BIG SMELTER PLANT

British Columbia Copper Company Announces Important Extensions to Smelter Plant.

Three New Furnaces. the Largest in Canada—Work to be Done Immediately.

Frederic Keffer, engineer of the British Columbia Copper company, has made an announcement that is of the utmost importance to Greenwood. The company's board of directors has decided to enlarge its smelting plant at Greenwood by the installation of three additional blast furnaces, each with a smelting capacity of between five and six hundred tons a day, or a total additional smelting capacity of about 1,600 tons daily. This enlargement, which will be carried out immediately, will set at rest all rumors regarding the removal of the plant. will result in the employment of a large number of men both at the smelter and the company's mines, and will, with the extension of the Dominion Copper company's reduction works, make Greenwood the largest smelting center in the Dominion.

Contracts for the three furnaces have been let to the Power and Mining Machinery company. These furnaces have a 48 x 240-inch hearth area and, as has been stated, have a capacity of from 500 to 600 tons each per day.

They will be the largest in Canada, Charging will be done from side dumping cars which will be hauled by trolley locomotives. The molten slag will be hauled away from the furnaces by electric locomotives in cars of 25 tons capacity each. The cars are to be made by the M. H. Treadwell company, and each is provided with an electric motor for tilting the car.

The ore bins will be practically rebuilt and made ten feet higher to increase their capacity, and all the railway spurs connecting with these bins will also be elevated to correspond.

Three large new blowers for the furnaces will be furnished by the Roots company. These will be driven by three 300-horsepower motors. In addition to these motors a 100-kw. motor generator will be installed, together with several smaller motors.

The ore will be hauled from the bins to the furnaces and the slag from the furnaces to the waste dump by five trolley locomotives. These will be also installed at the smelter a completely equipped machine shop with all necessary tools.

At the Mother Lode mine it has been decided to substitute electrical power for the steam driving the air compressor. For this purpose a 500-horsepower motor has been contracted for and also three 50 kw, stepdown transformers will be located at the mine. The ore crushers will be driven by electric motors now in service at the smelter, and they will be replaced there by larger machines. The electrical apparatus will be furnished by the Westinghouse Co., and the new pumping plant comes from the Canadian Foundry company.

There will also be installed a new track scales of greater capacity than those already in use.

The new furnace building will be constructed of steel. It is the intention of the company to push forward the construction of the work as rapidly as the weather will permit.

FATALLY INJURED.

George Verrisich Meets Horrible Death at Smelter.

A horrible accident occurred at the B. C. Copper company's smelter at 4:10 Monday morning. Geo. Verrisich was fatally injured and Geo. Wilbur was bruised and burned about the hands but not seriously injured.

The accident occurred in connection with the dumping of the molten slag by means of an electric locomotive, Wilbur was driving the locomotive, and Verresich was attending the slag car. From the evidence given at the coroner's inquest by Wilbur it appears that the engine was run farther out the track on the slag dump than usual. In attempting to stop the engine Wilbur stated his glove got caught in the brake. In his excitement the trolley was not taken off and engine and car were taken over the dump, falling nearly seventy feet to the flat beneath. Wilbur miraculously escaped with a few bruises, but poor Varrisich fell with the slag car and the molten matter ran over him, burning him terribly. The cries of the unfortunate man aroused the neighborhood and soon relief was at hand. He was taken to the hospital, where he died after 18 hours' suffering.

Dr. Foster, the coroner, held an inquest on Tuesday with a jury, of which C Scott Galloway was foreman. They visited the scene of the accident, and the hospital to secure Wilbur's evidence. After hearing the evidence of several witnesses the following verdict was brought in:

"We, the jury, find that the cause of death of George Varrisich was by the overturning of the motor and slag pot from or near the end of slag track No. 2, at the B. C. Copper company's smelter at Greenwood, B. C., at the hour of 4:15 a. m. on Monday, December 4th, 1905."

The deceased was a native of Austria. He has a brother who is also employed at the smelter. The funeral took place on Wednesday morning from the Roman Catholic church, Rev. Father Bedard conducting the services.

FIRE AT PHOENIX.

The No. 1 Ore Crusher of the Granby Destroyed.

A fire occurred Friday night at the Granby mines, Phoenix, destroying the No. 1 ore crusher, building and electric motor. This has not affected the shipments of ore from the mines, as a heavier tonnage is going out over the Great Northern, while that of the Canadian Pacific is cut down.

A third mammoth ore crusher, like the one destroyed, is now being manufactured in the east.

When the fire occurred one of the C, P. R. steel dump cars happened to be directly underneath, and when the ponderous machine fell it dropped squarely into the ore car with its weight of fifty tons.

California leads the world in the lengths of its electric power transmissions. This is largely due to the fact that many of the state's large water powers are near the Sierra Nevada mountains on the eastern side of the state, while the largest cities are on the western coast.

AN INVESTIGATION

Insurance Official Discusses Proposal for Enquiry.

COMPANY'S STANDPOINT

There Is Danger at Present That Unwise Restrictions Would Be Enacted.

"Insurance is a business, and yet it is also philanthropy reduced to a business basis." This is the opinion of a prominent insurance official of this city, says the Montreal Star.

When asked what was said as to an investigation into the condition of the Canadian life insurance companies, this official stated it was the general impression that such an investigation would take place, but that just now it was a question whether the present was a suitable time for it.

If it were a year previous or a year hence it would be welcomed, for he believed the Canadian companies would come out with flying colors. He did not believe that the evils which had had been revealed in New York had their counterpart at all in Canada Just now, however, owing to the scandals in connection with the New York companies he thought the public would be prejudiced and not in a position to give a cool and deliberate judgment such as might be expected under ordinary circumstances.

As a result of this prejudice he believed that an investigation at this time would be injurious to the business, not because of anything it would reveal, but because of the blue spectacles which the public are at present wearing. Anything that could be distorted into further inflaming the public mind would probably result in the passing of legislation, especially as regards the insurance companies' powers of investment, which would be extremely injurious to the companies and also to their policy holders.

However, if an investigation should be brought on here it should be in an endeavor to get the actual facts and the truth in a calm and consistent manner and not endeavor to make out every man a crook or a fool.

"We have been asked: Why not give the people cheaper insurance? We are told that the government may establish an insurance bureau in connection with the postoffice department. Let the government establish this bureau; we would welcome it for the reason that they could not, I say it frankly, supply insurance today as cheaply as the companies are already doing.

"Then again we are told our expenses are out of all proportion. You can take it as certain that every life insurance manager deplores the fact that insurance expenses are at all heavy, and I would like to ask who is responsible for this. It is the public. I have now been connected with insurance for over twenty-eight years and in all that time remember but four persons who came into the office to insure their lives without being canvassed; two of them were a saloon keeper and his wife, whom I afterwards found had been declined by another company a short time before; another was a man from Eastern Ontario, who fainted while being examined. I have a dim recollection there was a fourth man but cannot remember the details. People will not insure their lives without being canvassed, and in fact, as a rule, they must be canvassed long and persistently. The British government has an insurance department and have put it in the reach of everybody, for every postmaster throughout the kingdom is authorized to receive applications. Nevertheless the amount of business is so pitifully small that it is never mentioned without a laugh.

"Again it is stated our agends are paid too much. If we are to employ agents to persuade people to insure their lives we must give them enough to live on just as commercial travelers have to be paid. The average income of the life insurance agent is perhaps $750; the statement has been made and I believe it is true. Do you know agents who are rich or even well off? In fact how many do you know who make more than a bare living? There are two ways of paying agents, by salary or commission, I know that the business obtained by the men under salary always calls for a higher rate. We must pay these agents enough commission to live, but we try not to pay them any more than is absolutely necessary.

"It may be supposed that companies which do not pay commissions can insure cheaper; this is not so. What it costs to secure a policy of $1,000 at the age of 35 on the whole life with profits plan, may be gathered from the following figures:

American average	$27 50
British average	28 50
German average	29 00
French average	30 70
Equitable of England, which pays no commission	29 92
London Life, no commissions	34 25

"There is also another more important factor to be considered and that is the profit derived from investments. It is a very easy thing for the manager of a financial institution to find investments that are absolutely safe, provided he does not care how low the interest may be. It is, however, the duty of the management of a life insurance company to obtain as high a rate as possible upon the investments, while, however, always remembering the first and most important thing is the necessity of absolute security. This is often a difficult problem, but on its satisfactory solution depends to a large extent the prosperity of the company. If the officers are content to take only such gilt-edged bonds as are offered in the market without making any special effort to get a better return upon their money, they are neglectful of their trust. They are not doing for their policy holders what they could and should do.

"The companies have to earn three and one-half per cent. in order to meet their obligations and it is only what they get beyond that rate that is profit. If the government of a non-progressive company were to so invest their funds as to net only three and a half per cent. they will by so doing cut off from their policy holders this great source of profit. On the other hand a company managed with a proper degree of financial ability is able to earn such large surpluses beyond that minimum rate of interest that its policy holders benefit enormously.

"The greatest danger from this insurance agitation is that the public mind might be excited to unjust and unwise legislation which would never be permitted under normal conditions. There has, for example, been some talk of restricting the investment powers of the companies. If there is one thing which the New York investigation has shown very clearly, it is that the investments of even the most criticised of the American life companies have been remarkably good Their securities have on the whole come out with flying colors. It is true that in some instances certain officials made a profit out of the sales to the companies which thus did not get their bonds as cheaply as they might have done, but this does not interfere with the high quality of the bonds themselves.

"An evil in one direction is not going to be cured by restrictions in another direction. Nothing has arisen to show the necessity of any restrictions on the investment powers of companies. Anything of this kind is a direct injury to every policyholder, since it lessens the powers of companies to invest their funds to good advantage and thus make the insurance cost more."

The Pyranees mountains, though 270 miles long, and its breadth near the center is one third of its length, yet this vast area has not as yet proved a workable mine of gold or silver.

MUNICIPAL VOTERS.

The majority of the members of three classes of municipal electors, who have hitherto been exempt from the city road tax, are now threatened with disfranchisement unless they pay a tax directly to the city from which they have always been declared exempt by statutes in force in every province in the Dominion.

Such is the effect of one of the many amendments to the Municipal Clauses Act, which were hastily adopted at the last session of the provincial legislature. The amount of tax is small and it will probably not materially affect the numbers of qualified voters. But it is almost certain that the effect was not intended nor even forseen by the municipal committee nor by the legislature.

The voters are broadly divided into two classes, assessed property owners and householders. The former are not affected by the recent legislation, but an entirely new definition of householder has been adopted.

Up to and including last year the qualification for voting as a householder was continuous residence in the city for 12 months preceding registration, and the payment of $60 a year for house or room rent in money or its equivalent and the payment of the statutory road tax of $2 a year.

The payment of $60 or of any sum is no longer requisite. All that is necessary is the payment of $2 during the year directly to the city. As most of the voters have to buy the road tax it seemed naturally at first sight that the effect of the amendment was simply to do away with the requiremeut of $60 for rent.

But the fact was evidently overlooked that there were, and are, three classes whose members are entitled to vote although exempt from payment of the road tax. The classes are ,women over 21 years of age, men over 50, and members of the Canadian militia.

Among other requirements under the new law, the city clerk is required ty display the voters's lists in full on the outside doors of the city buildings, and to insert names daily as they are received by him duly attested.

The names of assessed property owners will go on the lists as a matter of course and without application, provided they have paid all rates, taxes or license fees not chargeable against land. Those who wish to vote as householders must make a declaration, forms for which which may be had on application to the city clerk, that they have paid resided in the city for 12 months continuously, and that they have paid directly to the city during the year, the sum of $5.

No deduction may be received by the city clerk, who is also collector of votes, more than 48 hours after it has been made.

On important feature of the changes in the law is that which fixes the date for municipal elections. Heretofore nominations have been held on the second Monday in January and elections the Thursday following. The dates are now changed to the third Monday and the third Monday and following Thursday respectively. The dates for 1906 will therefore be, for nominations, January 15th and for elections January 18th.

The postponement of elections by a week may have the effect of deferring the opening of civic election campaigns until after the Christmas and New Year holidays, which would probably cause no displeasure to anyone concerned.

The flouring of gold, whibh occurs in the parting of buttons carrying a high proportion of silver, can be overcome by dropping the button into hot acid instead of cold. Buttons carrying 1 mg. gold and 10 mg. silver can thus be parted without breaking up the gold.

The first plant for the manufacture of alumn was established in Philadelphia in 1810 by Gerard Troost.

Putty is a mixture of whiting and linseed oil beaten together to a consistency of thick dough. Whitinfi is chalk from which impurities have been removed. The combination price on whiting is 42 cents per hundred pounds, while linseed oil is quoted at 38 to 40 cents a barrel.

A majority of the mines floated in Rhodesia have had small reefs and short ore shoots and have mostly been financial failures. The determining factor in all successful mines is ore in the mine, and this has been absent in almost all Rhodesian flotations. Notwithstanding all this, the district has produced about four millions of dollars

---

Crude zinc ores are not adapted to direct treatment in the distilling retort on acconnt of the iron contained. This metal is highly detrimental to the retorts, fluxing with and destroying them, thus adding greatly to the cost of reduction. It is for this reason that that concentration of some sort is neeessary.

THOMAS THOMAS,

MERCHANT TAILOR,

Copper St. Greenwood. Next door to C. P. R. Telegraph office.

Synopsis of Regulations Governing t s Disposal of Dominion Lands within t e Railway Belt in the Province British Columbia.

A LICENSE to cut timber can be acquired only at public competition. A rental of $5 per square mile is charged for all timber berths excepting those situated West of Yale for which the rental is at the rate of 5 cents per acre per annum.

In addition to the rental, dues at the following rates are charged:—

Sawn lumber, 50 cents per thousand feet B. M.

Railway ties, eight and nine feet long, 1½ and 1¾ cents each.

Shingle bolts, 25 cents a cord.

All other products, 5 per cent on sales

A license is issued as soon as a berth is granted but in unsurveyed territory no timber can be cut on a berth until the licensee has made a survey thereof.

Permits to cut timber are also granted at public competition, except in the case of actual settlers, who require the timber for their own use.

Settlers and others may also obtain permits to cut up to 100 cords of wood for sale without competition.

The dues payable under a permit are $1.50 per thousand feet B. M., for square timber and sawlogs of any wood except oak; from ½ to 1½ cents per lineal foot for building logs; from 12½ to 25 cents per cord for wood; 1 cent for fence posts; 3 cents for railway ties; and 50 cents per cord on shingle bolts.

Leases for grazing purposes sre issued for a term of twenty-one years at a rental of two cents per acre per annum,

Coal lands may be purchased at $10 per acre for soft coal and $20 for anthracite. Not more thau 320 acres may be acquired by one individual or company.

Royalty at the rate of 10 cents per ton of 2,000 pounds is collected on the gross output.

Entries for land for agricultural purposes map be made personally at the local land office for the district in which the land to be taken is situated, or if the homesteader desires, he may, on application to the Minister of the Interior at Ottawa, the Commissioner of Immigration at Winnipeg, or the local agent for the District, within which the land is situated, receive authority for some one to make entry for him.

A fee of $10 is charged for a homestead entry.

A settler who has received an entry for a homestead is reduired to perform the conditions connected therewith under one of the following plans:

(1) At least six months' residence on and cultivation of the land in each year during the term of three years.

It is the practice of the Department to require a settler to bring 15 acres under cultivation, but if he prefers he may substitute stock; and 20 head of cattle, to be actually his own property, with buildings for their accommodation will be accepted instead of the cultivation.

(2) If the father (or mother, if the father is deceased) or any person who is eligible to make a homesteod entry under the provisions 0f the Act, resides upon a farm in the vicinity of the land entered for by such person as a homestead, the requirements of the Act as to residence prior to obtaining patent may be satisfied by such person residing with the father or mother.

(3) If the settler has his permanent residence upon farming land owned by him in the vicinity of his homestead, the requirements of the act as to residence may be satisfied by residence upon the said land.

Application for a patent should be made at the end of three years before the local agent, sub-agent or a homestead inspector.

Before making an application for a patent, the settler must give six months' notice in writing to the Commissioner of Dominion Lands at Ottawa, of his intention to do so.

W. W. CORY,

FRIDAY DECEMBER 8, 1905.

REGULAR DIVIDENDS.

The payment of nearly half a million dollars in dividends by the Granby company and the announcement that regular dividends will be paid in the future, marks a new era in the history of low-grade mining in the Boundary. At an extraordinary general meeting of the shareholders held in New York on Friday last a dividend of $405,000 was declared. This is at the rate of three per cent. on the issued shares. The par value of the stock was raised from $10 to $100 and instructions were issued to apply to the legislature to secure the necessary amendments to the act of incorporation authorizing the directors to declare regular dividends without calling the shareholders together.

It is gratifying to know that those who first showed their faith in the Granby mines will be the largest recipients of dividends. Jay P. Graves who stayed with the mines during the trying experimental days, still retains a large block of stock and is one of the heaviest individual shareholders. Henry White, another pioneer of the Boundary, retained a large block of stock, and A. L. White, who has been Mr. Graves' right hand man, is one of the lucky ones.

The Granby is only the first of the big low-grade mines of the Boundary to become a regular dividend payer. The B C. Copper company, with the comprehensive policy of expansion which has just been announced, and the Dominion Copper company, are sure to join the Granby in demonstrating that those who invested in the big mines of the Boundary will reap a sure and lasting profit on their investment.

AN OBJECT LESSON.

The efforts of the Canadian Pacific Railway company to destroy Vancouver as a wholesale center by giving preferential rates to Winnipeg and points east, should be an object lesson to the patriotic denizens of the Terminal city, who used every means in their power to thwart the efforts to secure railwey competition and to leave Vancouver and all other Southern British Columbia towns at the mercy of one railway corporation. They should now be able to see that one railway can make or break a city. All it has to do is to arrange its rates to suit its own selfish purposes and no city can live unless it can secure relief from a rival railway company. The Vancouver merchants would not dare to take a stand against the C. P. R if they could not route their goods by another railway. The friends of railway monopoly are always proclaiming that there is no such thing as railway competition. But it is a mighty nice thing to have another railway when a big corporation like the Canadian Prcific takes a position that is detrimental to the best interests of a city.

IT IS hoped that the arrangements entered into by the Granby company and its men in reference to the daily hours of employment can be satisfactorily adopted at other smelters. It is physically impossible for men to continue working thirteen hours a day and the attempt to do it may lead to loss of life and injury to property that would more than offset any advantages that may be derived from forcing men to work beyond the reasonable limit. It would be much more satisfactory, too, if the change could be made without a resort to legislative force. Paternal legislation is objectionable at best. The proper way to arrange industrial difficulties is by the application of good common sense on both sides and by approaching the question in a reasonable, rational spirit of give and take.

THIS week we received from the chairman of the Publicity committed of the Spokane 150,000 Booster club a letter stating that his committee were arranging a comprehensive programme of publicity for the Inland Empire. They desired the assistance and co-operation of all important centers and wanted the names of the president and secretary of the Greenwood Board of Trade. We have refrained from answering this letter.

GREENWOOD should see that the Dominion copper company's smelter is built here. It should see that the Great Northern railway is extended here at the earliest possible date. Its people should feel that this is the best town in the best mining district in the province. Towns do not grow just like Topsy. They are the result of eternal vigilance, the everlasting stick-to-itiveness. the continual boosting of their citizens.

THE Golden Star admires the Vancouver Province, its editor and all things appertaining to that organ. It gives expression to its admiration in the following words: "The Vancouver Province, as a newspaper, is the nearest thing to nothing, and Editor Nichol is about as insignificant as a nit hanging on to the end of a hair on the end of the tail of a dog."

WITH the amount of development, and with the big promises of big things to come, might we be permitted to mildly suggest that the Greenwood Board of Trade should arouse itself from its long, sound sleep.

THE Grand Forks Gazette, in a moment of weakness, tackled Ald Neil McCallum, The editor is now kicking himself for having been a little too impetuous.

FIFTY men properly organized with a definite mission, could make Greenwood the largest, richest, and best town in the interior of the province.

THE annual meeting of the Greenwood Liberal association will be held this evening.

SPOKANE has its 150,000 Booster club, Greenwood has its Board of Trade.

THE old reliable B. C. Copper company has decided to trot a heat.

GREENWOOD is the smelting center of the Boundary.

Zinc is a peculiar metal. When cold it is hard and crystalline, but if slightly heated it is very soft, and it is susceptible to anp treatment that brass may receive. In drawing zinc sheet in a press, the differende between the melting point of the metal and that of the temperature at which the best drawing takes place is so small that the problem of heating becomes serious if one is not conversant with the fact that zinc may be heatod in oil. Attempts are made to heat by other means, but much waste occurs. To heat in this manner, a heavy oil with a high flash point should be used, and a thermometer employed to register the temperature. This instrument will obviate any over or under heating and prevent waste from such means. In addition to acting as a heating agent, the oil has a good effect on the drawing dies.

The Pyramid of Cheops, or the Great Pyramid, the greatest of all Egyptian pyramids, covers an area of twelve acres. Its base was 768 feet square. Its perpendicular height was 482 feet, and its area at the top is about twelve yards square. The content of solid masonry has been estimated at 82,111,000 cubic feet. According to Herodotus it took 100,000 men ten years to make a causeway 3.000 feet long to facilitate the transportation of the stone from the Turab quarries, and a similar number of men twenty years to complete the pyramid.

Modern Petrology as a systematic science is yet immature, owing to the conflicting ideas still existing regarding the genesis of rocks and the differentation which has given rise to various rock species. American geologists have proposed a new system for the classification of rocks, but it is objected to on aecount of the fact that the progress being regularly made in the science will not permit of the permanent adoption of a system. Another objection is that petrologo ceases to have any reason for existence when divorced from geology.

The calculation of losses in power transmission is always an important part in distribution work. A recent examination of a certain power plant and linc showed the following losses: Between the engine cyllinders and the high potential 'bus bars in the generating station, 12.9 per cent.; on the line, 5.5 per cent.; at the sub-station, 13.7 per cent. In this case the loss on the line is low in comparison with the other losses, and it is quite probable that a different installation would prove more economical.

Umber is found in various places, but the best variety is known as Turkish umber, and is mihed in Cyprus. Raw umber in color is olive brown, and when heated becomes of a reddish color. It is composed of oxides of iron and manganese, some silica, lime, magnesia, alumina, water, etc. When highly heated all the water is drawn off, causing a change in the brown, hydrated ferric oxide to red ferric oxide, and also increasing the percentage of red brown manganese oxide. The pigment resulting is known as burnt umber.

The earliest rocks rocognized in the Central Copper River region, Alaska, are the Tanana and Dadina schists, which include both sedimentary and igneous members, and are regarded tentatively as pure silurian. The silurian system may be represented in the conglomerates and schists of the Valdez formation. These rocks constitute the chief part of the Chugach range.

Scissors and Paste

What J. J. Hill, president of the Great Northern railway, promises has a way of coming true, and Mr. Hill has a reputation for doing more than he talks Consequently it is no matter for surprise that the preliminaries are now being made for the commencement of construction on the V., V. & E. railway from Cloverdale east to Midway. When Mr. Hill was in Vancouver in the autumn he stated in an interview published in the World that construction of the V., V. & E. from Cloverdale east would be begun in early winter, and already supplies for thirty men have been purchased in New Westminster and shipped to Cloverdale. Machinery for grading is understood to be on the way and in the meantime the surveyors are busy. Vancouver merchants will hail with delight this forword movement toward the completion of the long-wanted direct line to Kootenay.—World.

Word comes from Nighthawk that Monday morning Ed. Anderson, a railroad laborer working in Chindahl's camp, was shot and killed by Paul Salvis, timekeeper for Winters, Parsons & Boomer at their Nighthawk camp. The tragedy occurred in A. Lindberg's saloon and was the result of a quarrel. The men had words a few minutes before the shooting and Salvis, towether with a halfbreed Indian who had been working for Winters, Parsons & Boomer, left the saloon. In a few minutes they returned, the Indian in the lead and Salvis a few feet behind. When they were well into the room, Salvis stepped from behind the Indian and opened fire on Anderson who fell at the first shot. Selvis fired five shots altogether, three os which took effect, the victim dying almost instantly. Deputy Sheriff Metcalf went from Loomis to Nighthawk Tuesday and arrested Salvis and the Indian and took them to Conconully to jail. The dead man was buried at Nighthawk Wednesday afternoon.

Dr. S. F. Tolmie, provincial veterinary surgeon, arrived in Vancouver yesterday, having just returned from a week spent in the Okanagan valley, where he has two men steadily at work among the small farmers, ranchers and others owning horses in that district in an effort to prevent the spread of glanders, so prevalent in many places along the coast. Dr. Tolmie states that a greater percentage of glanders has been found among the horses in and about Vernon and Peachland, but that every means of prevention to stop the spread of the disease is being taken. "In nearly every section we are finding some horses that are contaminated," said Dr. Tolmie. "In the severe cases the horses are being destroyed, but where the disease is found to exist only in a slight degree the animals are being treated for a cure. In almost every instance it is found to be chronic glanders, and the Mallein test, which is adopted by almost every civilized country, is being used where no clinical symptoms appear. Among the ranch horses very little of the glanders is being discovered, but in towns and villages where horses are continually in touch with one another the disease is very common." Dr. Tolmie states that although it strikes some of the horse owners rather hard, all are rendering every assistance in their power to help clear the country of this dread disease. Dr. Tolmie leaves for the Okanagan again on this afternoon's train and will continue his efforts to stamp out this disease in that territory. Speaking of the prospects of that country, Dr. Tolmie states that there are a large number ef Western farmers coming in there looking over property with the intention of locating, and most of them are very well pleased with the country.—News-Advertiser.

Robert H. Anderson, the well-known mining man of this city, has accepted the place of mine manager of the properties of the Sullivan Group Mining company at Kimberley, East Kootenay, and left for there yesterday. Mr Anderson is one of the best known mining superintendents and managers in this country. For five years he was manager of the B C mine near Eholt, and during that period the mine paid a profit of nearly three quarters of a million to its owners. For two years he was the superintendent of the Le Roi mine, and those who are best informed as to the condition of that mine when he left it and the quantity of ore which was gotten out under his administration will understand that he did first class work while there. For a year he was superintendent of the Highland mine at Bingham, Utah, owned by the Utah Consolidated Mining company; in fact, he has held responsible positions in mines for many years. Mr. Anderson was seen before his departure for Kimberley yesterday, and said he had just returned from a trip through northern and southern Idaho and also a portion of Oregon, in company with S. F. Parish, formerly manager of the LeRoi. Mr. Parrish, he said, has returned to Salt Lake to look after certain mining interests in Utah and Arizona, and is expected to return north about the first of the year. Mr. Parrish, he says, is enjoying very good health and would have liked to visit Rossland for the purpose of seeing his many friends, but a press of business prevented him from doing so. Asked about the Sullivan group, of which he is to assume charge, he replied that he had never visited the property and, therefore, could not say anything in regard to its merits. The group had a first-class reputation and his intention was to do all that he possibly could while he was in charge to promote the best interests of the company.—Rossland Miner.

Purple of cassiuf is prepared by adding protochloride to a solution of chloride of gold, when it is thrown down in the form of a dark purple colored precipitate. When mixed with borax and applied to the surface of china purple of cassius gives a beautiful rose pink or rich purple color, according to the amount employed.

Carboniferous rocks of New Mexico are very important formations. They are found in most of the principal mountain ranges, and in most localities they are important ore carriers. As guide horizons they deserve the fullest consideration in the locaiion of all mineral deposits.

Steels containing only a small quantity of aluminum are especially suitable for electric machines.

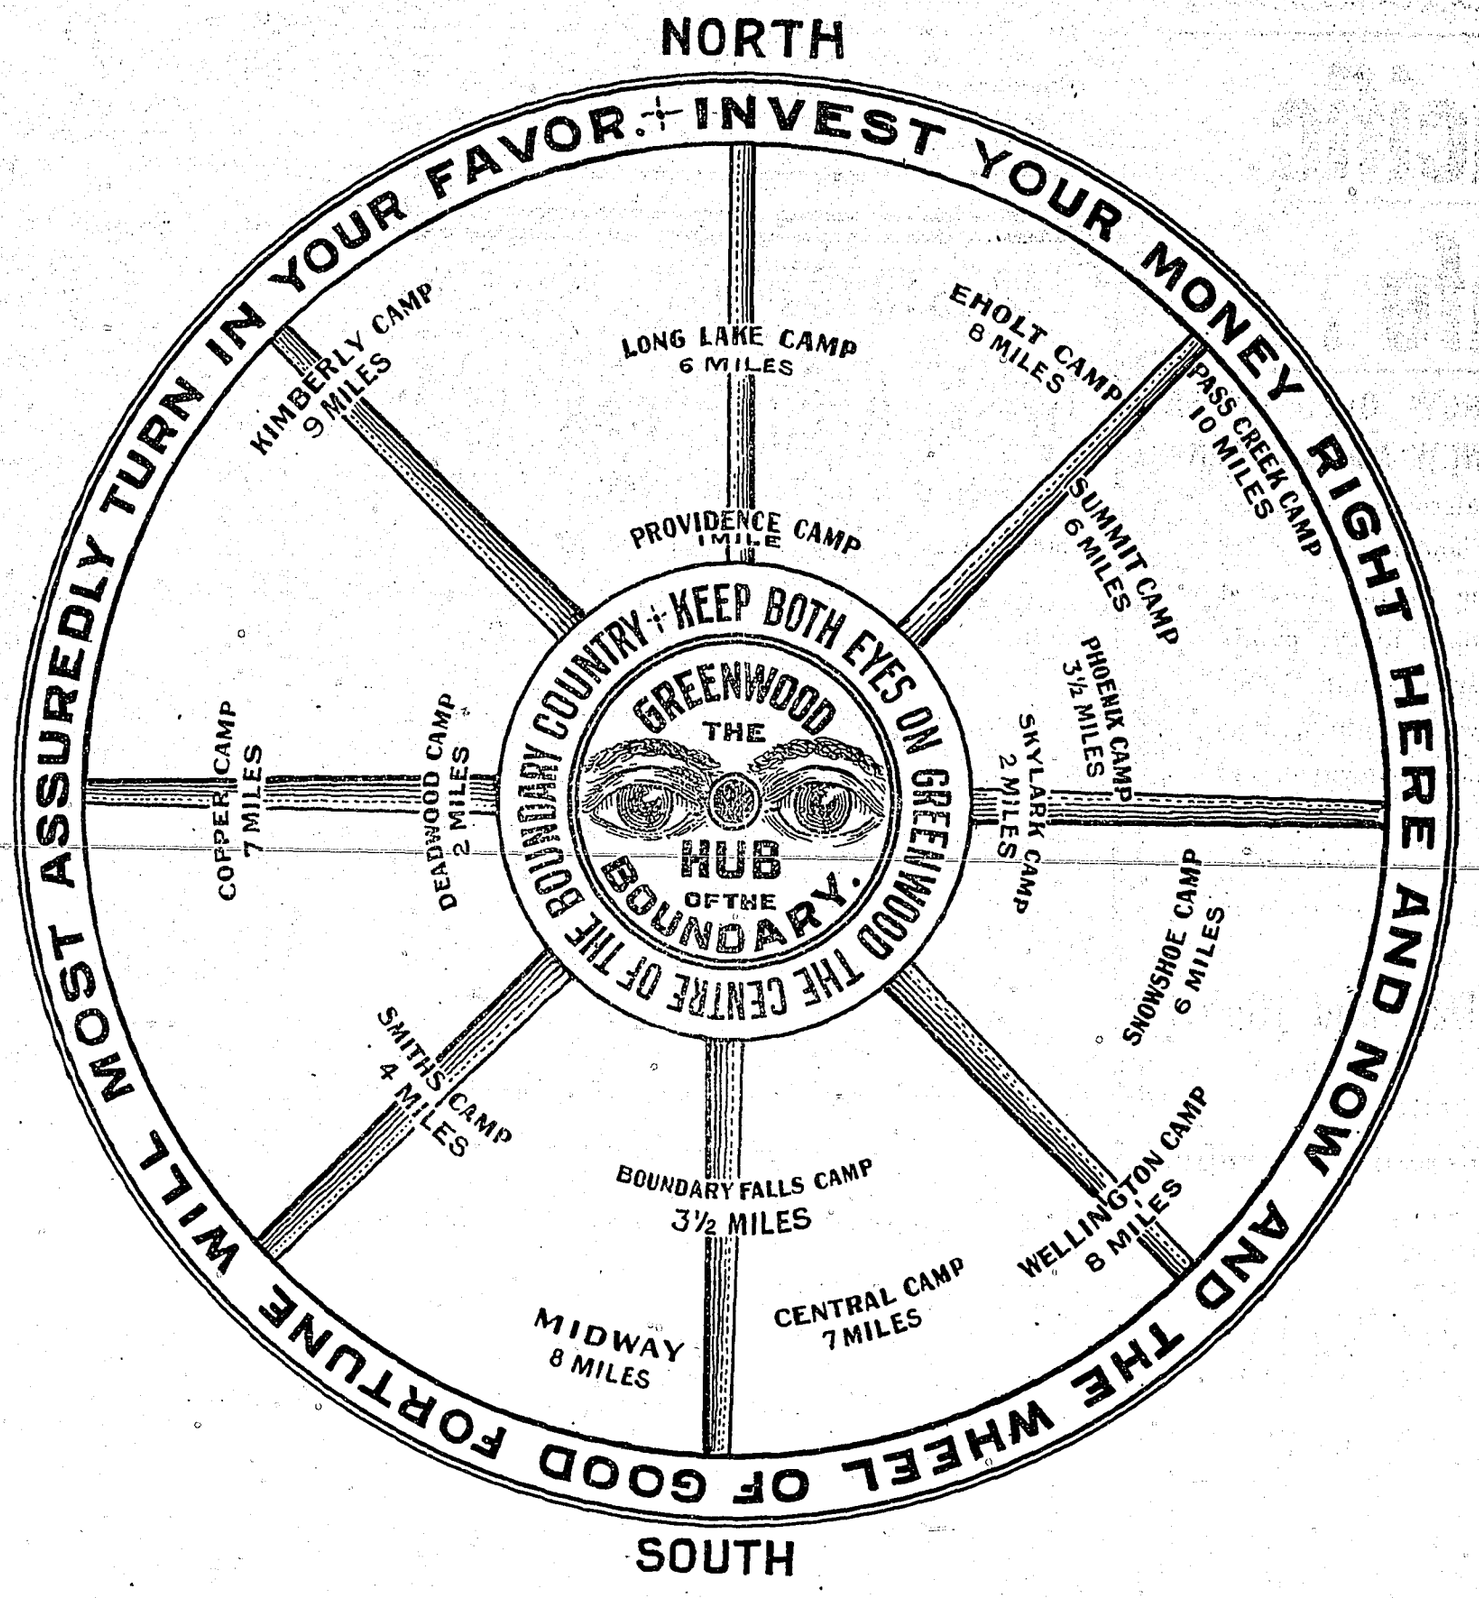
Price $1 per pkg., six for $5. One will please, six will cure. Sold by all druggists or mailed in plain package on receipt of price. Write for Pamphlet.
BEFORE AND AFTER
The Wood Medicine Co., Windsor, Ontario.

No Time Equal to the Present



Never in the history of the Boundary has the district had a brighter outlook than today. With the successful development of the immense large bodies of low grade ore and the enlarged and much improved facilities for treating at a very small cost, the continued opening up of new high grade properties and their successful and profitabl operation has made the Boundary famous as a mining centre, and every day adds more to the list of new finds and bigger values. It is readily admitted that Greenwood is the Eldorado of the Boundary with all roads leading thereto, and surrounded as it is, with such magnificent resources is destined in a few years to be a second Butte. If you therefore want to participate in its future prosperity, now is the time to invest both in mines and real estate. For NINETY DAYS we intend giving you a chance to make a safe and profitable investment. Every lot we own will be put on sale at rock bottom prices during the above period. Prices ranging from $50.00 up, at terms to suit the purchaser. Make your selection and make it early.

NEW TRAIN SERVICE.

Effective on the 10th inst. a new train service and time card will be adopted on the Spokane Falls and Northern system. The new service is regarded by the officials of the road as a decided improvement on the present arrangement. Running time is cut down, one mixed train is eliminated, and hours of departure and arrival are rearranged to accommodate the traveling public.

One important outcome is the opening of the Curlew-Midway section of the Vancouver, Victoria and Eastern road to passenger traffic, and the substitution of Midway for Northport as the northern terminal for the regular through train service.

Hereafter the through train on the Spokane Falls and Northern will run from Spokane to Midway, B. C., the actual terminal being at Ferry, Wash., passing through Grand Forks, B. C., and Curlew, Wash., and en route to Midway. The distance is 167 miles. It will leave Spokane daily at 9:45 a. m. as before, reaching Midway at 5:40 p. m. Returning the through train will leave Midway daily at 10 a. m., and reach Spokane at 5,45 p. m. The present hour of arrival is 6:20 p. m.

The mixed train from Nelson, B. C. to Northport will be eliminated and a solid passenger train will be operated daily from Marcus to Nelson, connecting with the Spokane and Midway trains. The present train reaches Nelson at 8:45 p. m., while the new train will arrive at the Kootenay lake terminal at 6:50 p. m., union station time, or 6 o'clock at the high line station.

Returning, the Nelson train departs at 7:20 under the existing schedule, while the new train will leave at 9:05, and make connections with the through train for Spokane. This improvement in running time will afford gratification to Nelson people who have been dissatisfied with the company's train service.

Thepresent mixed train to Republic, Wash., will be maintained but running time will be improved by having the train depart an hour later, or at 8 instead of 7 a. m., and arrive 15 minutes earlier, at 6:15 instead of 6:30 p. m.

The service on the Rossland branch is affected to a trifling extent only. The train now departing at 11:05 will leave at 10:55 under the new time card, but the north bound train will reach Rossland each evening at 5:15 as at present.

A through coach for Nelson will be run daily out of Spokane, and the Nelson train will also carry a through coach for Spokane. It is probable the buffet cars now running between Spokane and Northport will be carried to Midway after the new time card is in working order.

A HOTEL ON WHEELS

New Dining Cars of the Great Northern Railway a Feature of the Oriental Limited.

It is, perhaps, best to say that in every respect—china, cuisine and attendants, the dining car serviee of the Oriental Limited is in keeping with the luxuriousness of the remainder of this regal train, and has won, as the dining car service has always helped to win, the title, "The Comfortable Way," for the Great Northern railway. The new dining car service of the Oriental Limited equals in beauty, design and interior furnishings anything which is operated on any transcontinental line. Every luxury which a first-class hotel or club affords in the way of service is really on the dining car of the Oriental Limited. The new dining cars were built with a special purpose in view of affording the most comfortable surroundings, as well as giving the traveler a unique and luxurious place in which to enjoy his meals. A gentleman who recently made the journey to the coast from St. Paul on the Oriental Limited, in speaking of the dining car service, said:

"I have traveled on almost every important railroad in the United States, but I have yet to find one which surpasses the Oriental Limited in the comfort and convenience afforded the traveler. Your dining car service is excellent, the equal of any in the country, and the superior of many. I was particularly struck with the beauty of the interior furnishings of these dining cars; they are really a novelty of car architecture."

Electricity may be regarded as a form of molecular motion or vibration capable of being transmitted through a metallic conductor at a high velocity. This vibration or motion may also be transmitted through space as in wireless telegraphy.

Coal cutting machines are used only in two mines in India.

Boundary's Largest Power Printing Establishment

MR. CUSTOMER:

It is contrary to the laws of nature to disregard the beautiful works of the Creator. It is also contrary to the laws of building up your own city to send East for your printing when it can be procured as quickly, as cheaply, and, in many instances, better, in your own town. Consider this matter carefully, and in placing your next order give the people who spend their money in your city a chance. x x x x x x

MR. SUBSCRIBER:

We trust that you will not overlook the litile circular sent you last week. It is a small matter to you, but a large one to us. If you have not attended to it yet, do so today. This week we have added nearly Five Hundred Dollars worth of material to our office, and to pay for it we must have what is coming to us on our Subscription List, x x x x x x x

CURLING.

A general meeting of the Greenwood Curling club was held in the club rooms on Monday evening with President Warren in the chair. Geo. Findley and H. W. Falconer were elected delegates to the Kootenay Curling association. They were instructed to favor a 12-foot outside ring instead of 14 feet as heretofore.

Skips for the year were elected as follows: K. C. B. Frith, J. S. Birnie, E. W. Bishop, E. B. Dill, Hugh McCutcheon, Dr. Mathison, Geo. Findley, J. D. McCreath, and W. Allison. The president, E. G. Warren, and vice-president, W. G. McMynn, are exofficio skips.

To encourage the younger curlers, Duncan Ross, M. P., offered a cup for competition among the club members. The skips for the competition are to be from the lead and second players, and are to secure the positions in a points competition.

Previous to the present soft weather two sheets of good curling ice were made, and curling will begin just as soon as the weather becomes colder.

The rinks will be selected by the skips this evening.
