GOOD PROGRESS ON GOLDEN ZONE.

The Miners are Making a Record in
Sinking—Ledge Continues Strong

Word brought down from the Golden Zone on Saturday last, stated that the shaft had reached a depth of 90 feet and the ore was stronger than ever. The dip of the dike is taking it out of the shaft and consequently a greater portion of the shaft is in ore, which appears to be getting more heavily mineralized all the time.

A marked evidence of the improvement may be seen from the fact that some of the miners are applying for stock in lieu of cash for their wages. Men who work in a property day by day and are thus able to see the way in which the ore body is behaving are in a much better position to judge intelligently of the merits of a mining stock than those who are living at a distance. The Golden Zone has the ear-marks of a winner and that accounts for the miners' showing an inclination to get in on it.

PHOENIX TIGHTENS UP

Rigid Sunday By-Law Goes Into Force—
Also Cuts off Groceries

Phoenix, B. C., April 15.—Last Sunday was the second since the law closing all bars took effect. The law was carried out to the letter; not an infraction of the law was attempted at any of the fifteen hotels, notwithstanding the fact that Saturday was payday at the mines and some \$50,000 was moving through miners' hands.

There was a time when gambling was a popular pastime in Phoenix; this has been permanently stamped out, and now the sale of liquor is being curtailed. At a meeting of the city council to-night a bylaw requiring all hotels to have thirty rooms for the accommodation of guests, or pay an extra licence fee of \$3,000, will receive its first reading.

This will practically mean that 50 per cent. of the saloons in the city will go out of business this summer. At present only three of the fifteen hotels have the required number of rooms. The present city council is carrying into effect several drastic measures towards moral reform.

WHAT IS THE ISSUE?

Last week the editor of the Penticton Press tried hard to fish for a compliment when he refers to the Gazette as dealing with the Press "apologetically"—whatever he means by that. This week the Gazette doesn't want to be considered in mood apologetic to the Press editor and to make sure that we will not be again misinterpreted it will be necessary to kick him—that being the only kind of argument which can appeal to some intellects or be understood by them.

Last week's dose of Press hysteria had the caption "Evades the Issue." One of the sure signs of the journalistic neophyte is the use of terms and phrases that are either meaningless or inapplicable, and this is an instance of it. Now what is the issue here? Can the Press state what it is, or is supposed to be, for up to the present not even a Pinkerton detective could decipher it from all the hysterical jabbering that the Press has given utterance to from the time its editor first plumed himself to the Saturday Sunset as being the only avowed journalistic prohibitionist—the one and only press champion of "local option" in the country. And yet this poor weathercock solemnly asserts in the midst of last week's dose of drivel that "The Press has no desire to force local option upon any community."

Utterly incapable of reasoning he will ask the silliest questions and from no apparent data arrive at the most asinine conclusions; as for example, where he intimated that the Saturday Sunset and Keremeos Chronicle had been caught in some imaginary trap by the agreement of the Government to submit a plebiscite when neither one of them said a word against a plebiscite, but on the contrary had advocated it. Both of them saw the futility of wasting further time on him and

Continued on Page Four.

SERIOUS ACCIDENT

H. Zibler Receives Severe Injuries Falling
Down a Bank.

On Sunday morning last H. Zibler, shoemaker, met with a serious accident that may tax his reserve strength to its fullest extent to pull him through at his advanced age of 73 years. After breakfast he started out alone for his usual Sunday morning stroll going out across Pinto flat. He evidently intended taking his walk up the Princeton road, and as many others have done, followed an old trail which leads down a steep bank this side of Whillans' ranch. The trail down the bank may have been safe enough at one time, but since the grade for the wagon road down the hill cut across it, a sharp turn is made in it to angle down the bank at a run in order to reach the road. It appears that a stone which he stepped on to check his pace down the declivity gave away with him and precipitated him down the bank on to the road where he lay for an hour or so before being found, and while lying there had got chilled, for he was in the shade of the bank where the morning or forenoon sun couldn't reach him.

While there was no marked evidence of it Dr. Whillans feared at first that a bone was broken in the hip. The old gentleman has been in Hedley for about a year and is well-liked by all who knew him. It is hoped that his injuries may not be as bad as they were at first thought to be, and that he may make a speedy recovery.

JOE MARTIN THE MAN

His Candidature in Stratford-on-Avon
Definitely Announced.

London, April 14.—Mr. Joseph Martin, K. C., ex-premier of British Columbia, is the Liberal candidate in the Stratford-on-Avon by-election. Mr. Martin's candidature is attracting considerable interest, and he is warmly welcomed by the Liberal press.

Mr. Martin, in addressing Stratford Liberals yesterday, declared himself an out-and-out Free Trader. He said he favored votes for women, and denounced Colonial Preference as a policy of greed and selfishness. He also said that he favored abolishing the House of Lords.

The constituency up to 1906 was Conservative, when it turned Liberal by a majority of 148. Captain Malcolm Kincaid Smith, Liberal, won the seat with 4,391 votes; P. Staveley Foster, Conservative, got 4,178.

SERVED HIM RIGHT

A Slayer of Songbirds Has to Pay \$90
for his Offence.

VANCOUVER, Wash., April 15.—Joseph Groselin of Portland, arrested in Yacont, and accused of killing songbirds, appeared before Justice E. M. Scallon this morning, pleaded guilty and was fined \$75 and costs, amounting in all to \$90.65.

WON'T THEY BE MAD

Here is Another Wrong for the Suffra-
gettes to Protest Against.

Spokane, April 12.—After June 11 no woman can enter any saloon in this state. The new criminal code makes it a misdemeanor for the owner or employee of "any drinking saloon or music hall, where intoxicating liquors are sold, to knowingly permit to enter such saloon, or sell or give any intoxicating liquors to, any female person."

B. C. WINS CASE

Government's Assessment of British Co-
lumbia Southern Lands Upheld by
Court in Nelson.

Nelson, April 14.—Mr. R. S. Lennie, who, by special appointment, heard the appeal of the C. P. R. last month against the Provincial Government's assessment of the British Columbia Southern Land grant in which \$150,000 per annum is involved, today gave judgment in favor of the government, upholding the assessment. The C. P. R. was represented in the case by E. P. Davis, K. C., and R. B. Bennett, K. C. The case will go to the privy council.

TO BE THE "IVORY CITY."

Alaska Yukon Pacific Exposition adopt
a Color Restful to the Eye.

Seattle, Washington, April 18.—Because nowhere on the grounds is there the glare of white, only the soft, mellow tone of old ivory, the Alaska-Yukon-Pacific Exposition which opens in Seattle on June 1st, has come to be known generally throughout the Northwest as the "Ivory City."

Chicago had its "White City" and a magnificent sight it was, but blurred vision and bursting headaches were the price of gazing too long upon it. Every other exposition since the Columbian Fair has made white its color, with the same painful results. Probably the A. Y. P. would have made the same mistake, had it not been for the fact that many of its structures were constructed of reinforced concrete and pressed brick. The brick in which all of these permanent buildings are finished are of the tint of old ivory and, since everything at the fair is otherwise in accord, it would not have done to have finished the many plaster staff structures in white.

Recently every building on the grounds was given its final coat of color and the practically completed exposition city presents a beautiful picture. The old ivory blends perfectly with the natural background of fir forest, into which the exposition is builded and one may wander the length and breadth of the grounds on the brightest day, without a thought of snooked glasses.

CANADA'S CROWNING GLORY

The Mountains of British Columbia
Graphically Described

Winnipeg, Man., April 12.—"Tourists leave in Switzerland two hundred million dollars every year," said Herbert W. Gleason, the celebrated mountain climber, when interviewed at the Royal Alexandra, "and in the Canadian Rockies you have fifty Switzerland rolled into one. It is true that your Switzerland is remote, and is not accessible to travellers as the Switzerland of Europe is. These mountains have, however, been made more accessible than they were, and they will yearly attract large numbers of sight-seers from all parts of the world. I am an American, but I am free to say that there is nothing in the United States which equals in magnificence what is to be found in your great west. Your Rockies are the glory of the Dominion."

"Just before coming west I lectured in Rideau hall at the invitation of Lady Grey. I stated at the lecture that it seemed to be like bringing coals to Newcastle, that I, an American, should come to the capital of the Dominion, and in Rideau hall should lecture on the chief glory of this country. It appeared to me that my audience, in which there were so many people who knew the west so very well, would find the lecture a bore, but I was surprised to find so very deep an interest taken."

MONTREAL INVENTOR DEAD.

Montreal, April 14.—Louis Jos. La-coste, eldest son of Sir Alex and inventor of the "ship brake" is dead. Pneumonia was the cause of death. The ship brake stops vessels quickly and has been adopted by the U. S. government for warships.

SCIENTIFIC TOMMY ROT

How Penny-a-Liners Impose on the
Public.

Every once in a while paragraphs are bobbing up in the papers concerning all manner of subjects, and the most extravagant fancies at times are given to the public, but the field of science usually furnishes the most prolific crop of them. Sometimes it is the re-discovery of a process for tempering copper; and at other times it is the transmutation of silver into gold.

Whether these things will ever be brought about no one can say, but the teachings of science would point to the contrary. Of course it is true that a few centuries ago many things

BURRELL CORRECTS HIM

Fruit Superintendent Taken to Task for
Incorrect Statement.

Ottawa, April 14.—At the meeting of the agricultural committee of the commons this morning Mr. Martin Burrell objected to a statement voiced by Mr. McNeill, superintendent of the fruit division department, that Americans were better packers of fruit than Canadians.

Mr. Burrell said it was in the interests of American shippers to say this regarding Canadians, but it was not the case. He complained that American fruit was coming into this country, particularly into the prairie provinces, which was not marked according to the demands of the Fruit Marks act. He wanted the same stringent laws imposed upon Canadians to be lived up to by the growers on the other side.

Mr. McNeill said he hoped to see the act strictly enforced, and also stated that during the year there had been a general improvement in the quality and packing of fruit. He spoke approvingly of the work done by the co-operative societies, their organization in many cases resulting in a better observance of the laws respecting packing.

were believed to be elements that were later on discovered to be compounds, and it is not many years ago that newer and rarer elements were evolved from some of the older ones that had been unquestioned by great scientists like Humboldt, Huxley, and Tyndall, while even the great Mendeleeff's law was violated by man who went Nature one or two better by making such compounds as calcium carbide and carborundum.

These fake science paragraphs about wonderful discoveries are manufactured by penny-a-liners who cater to the itching ear which is always open for something new. Readers have the right to either believe these things or reject them.

There is another kind of paragraph, however, that the penny-a-liners springs on an all too credulous public for which it is harder to forgive him: That is the dishing up of stuff as new, which is old enough to have passed into the chestnut state, but being dressed up in different garb the public swallow them as the latest out.

It is not only the penny-a-liner who starts these chestnuts out on another trip, but in many cases the ignorant sleepy journalist who has failed to keep abreast of the times is responsible for not a few, and a common field for his operations nowadays is the realm of wireless telegraphy.

With great solemnity the other day the Vancouver Province published what it called a new record in wireless made from a station in Cape Breton to the Eiffel tower in Paris a distance of 3000 miles. Now it is several years ago since Dr. Lee DeForest of the United Wireless Telegraph Co. communicated by wireless between the Manhattan beach station and Glen-gariff, Ireland, a distance of 3600 miles without a station in Ireland at all. He had a kite with a wire 300 ft long attached and two men catching hands, one man holding the kite wire and the other the wireless receiver from which the message was taken.

San Francisco papers told a short time ago of the government station at Russian Hill, California, put in by the United Wireless Company picking up messages that were flying around Japan a distance of 5700 miles.

Now how is this for another old chestnut which appeared last week in most of our British Columbia dailies: "Paris, April 12.—Naval lieutenants Collin and Jeanne, the inventors of a wireless telephone apparatus with which they succeeded last fall in communicating with Dieppe from Paris, today introduced a new and greatly improved apparatus. The minister of marine exchanged conversations with the operator at Melun, a distance of 30 miles and he declared that the result was a vast improvement over that obtained by the ordinary telephone. The sound was clearer and purer. In December, 1908, despatches from Berlin declared that Waldemar Pilsen had succeeded in telephoning without wires from a suburb of Berlin to Lyngby near Copenhagen, a distance of 250 miles."

Concluded on Page Four.

Town and District.

John Love came over from Phoenix on Saturday.

John Gladden went out yesterday morning bound for Fairview.

Some are predicting three more weeks of this cool weather.

C. D. B. Green, P. L. S. was in town last week on professional business.

Chief Engineer J. H. Kennedy of the V. V. & E. was in town on Monday night and went up the river on Tuesday.

Harry Swan is finishing up the Ingram bridge over on Kettle river this week and is expected back to Hedley shortly.

The dance on Friday night last in Fraternity Hall brought out a good attendance and an enjoyable evening was spent.

The Sibley family started for Alberta on Tuesday, prairie schooner fashion. They intended driving to Midway and taking the train from there.

Two men continue at work on the Oregon mineral claim and are making a very fair showing. The assay returns from the ore have been particularly good.

It took Hedleyites a few days to get used to the sound of the stamps dropping again, but the old familiar growl of the slushing stamp-head as Kipping calls it, has again accustomed itself to the ears.

Malcolm C. McAuley of Keremeos Station was married last week at Kelowna to Lillian Maud Bower, and the happy couple like birds in spring time have started nest-building at Keremeos. Mac's Hedley friends extend congratulations.

Mrs. Conn was taken seriously ill at Princeton last week. The fact being made known to the managers of the Presbyterian church in Hedley, they assured Mr. Conn that it would not be advisable for him to come to Hedley for the service on Sunday night last.

Mr. and Mrs. Gerald Clark, of Green mountain, have the sympathy of their Hedley friends in the bereavement sustained through the death of their baby girl Zoe, aged four months, which occurred on the morning of the 15th. after an illness of a day or two.

Grand Forks appears to be the first in the field for 24th of May celebration. The Volunteer Fire Brigade of that town have charge of the celebration and announce a programme of horse-races, broncho-busting, foot races, firemen's races, baseball and football matches, etc.

Keremeos has live real estate men in Messrs. McTavish, Lawrence and McDonald who are making a big success in bringing in buyers. They have a choice property to handle in the old Price estate and they are about the only ones that are making any stir in bringing people in.

On Sunday evening there was a little blaze down at the old Dago camp by the mouth of Twenty-mile. The camp was deserted and all the tents taken away, but the frame work of the old cookhouse was standing, and this seemed to have an attraction for some vandal who had evidently fired it out of pure wantonness.

Under ordinary conditions we would be looking for high water this spring owing to the late season, which encourages the belief that when the water starts to flow it will go with a rush. The dam up on Twenty Mile Lake will prevent the creek from ever getting very high and the river is too far below us to ever do any damage to the town.

A. H. Kellert, superintendent of construction for Stewart & Welch was in town last week on a trip of inspection over the camps operating between here and Princeton. Some seem to think that his visit gave some indication of a probability of work being opened up beyond Princeton at an early date, or at least as soon as the rails reach Hedley.

J. H. Bromley, was in town on Saturday last with his stallion "Black Prince" which is a handsome beast and had many admirers. The horse is a cross between Shire and Percheron, and was purchased by Mr. Bromley at Abbotsford last fall. The animal is a trifle thin at present having been fed nothing but hay all winter yet he weighed 1875 lbs which shows that when he is fat he will go about 2000 lbs.

This has certainly been a backward spring as evidenced by the low water in the river and creeks. While the roads around Hedley have been dry and dusty for about six weeks or more winter still holds the mountain tops.

Anyone who has been following the temperature readings from week to week will note that the mean temperature on the hill for any week has been several degrees below freezing point, and it is the mean temperature that determines the melting of the snow in the spring-time, not the mid-day readings.

L. W. Shafford, M. P. P. returned on Saturday from Princeton and left on Tuesday for Penticton. He intends making a trip to the coast shortly and will go to Victoria to look over some departmental matters before starting east. He expects the present year to see considerable improvement in the roads of the district this year, and hopes that with the most of the appropriation going into repairs that boulders will become a thing of the past. The Twenty-mile road has come through the winter in very fair shape for a new road and with the repairs which it will be given this year it should be in very good shape. The Golden Zone has made good use of it so far.

Jimmy Riordan, of Olalla, was in town last week, having walked over by way of Keremeos, for the snow is still too deep on the summit to come by way of the Nickel Plate. Among the old prospectors Jimmy is about the youngest old chap in the whole bunch and was fresh as a daisy at the end of the tramp. Last summer he did considerable development work on his Resort claim on Riordan mountain which resulted in giving him a fine showing and he expects to do a good deal more during the coming season. When he staked his first claim on the mountain which bears his name he had the Nickel Plate ground staked as well, but let it go because the Billy Goat on Riordan mountain gave him the best values.

Golf is the newest game to be added to the list of Hedley diversions. Links have been laid out on Pinto flat and practice is held several times each week. Messrs. MacHaffie and Hincks of the bank staff are the first to obtain outfits and it is expected that several others will join the ranks of the golfers for the season's play. The start is made on the bench where the road goes up to the flat. It zig-zags across the flat to the foot of the mountain above the schoolhouse and keeps along the foot of the mountain to the old base-ball grounds, from there its course strikes southward past the butts on the rifle range to a point down near the V. V. & E. station and it winds up on the new base-ball grounds, making a total distance covered on the links of about a mile and a half. It looks like a game that would suit the old chaps as well as the younger ones, and is likely to become popular.

There is no word yet concerning the commencement of track-laying, although those who are supposed to know most about it admit that it may begin any day, and point to a possibility of the first crossing of the Similkameen being made before high water. There was another yarn brought to town last week, given on the strength of a G. N. R. conductor, who is mostly employed on construction, to the effect that nothing would be done until after high water, because the G. N. R. had only one track-layer that duty had been paid on, and could work on this side of the line, and that said cosmopolitan track-layer, duly equipped with passport was now working in Alberta on a stunt that would last for two months yet. Really this is getting funny. A while ago we were told that no track-laying could be done before May 15th unless the Great Northern could borrow an old engine somewhere, and now the duty on a track-layer looms up like a giant spectre athwart our path.

J. J. O'Sullivan, who has been with Munn & Co. of the Scientific American for thirty years was in town last week introducing Americana, the great work of reference being brought out by that institution. The British rights for Americana have been purchased by Harmsworth who are having it reset and re-printed so as to conform to British spelling and British currency as well as to satisfy a recent requirement of the British copyright law for protection of British printers and publishers, and the reading public of Great Britain. This fact in itself, as well as the fact that the Scientific American is behind the work is evidence of its excellence. Mr. O'Sullivan has traversed the Canadian field very thoroughly, spending some four years in doing so, and incidentally has become an enthusiast for Canada, and her prospects. In fact it would be a good thing for some Canadians to catch a little of his enthusiastic faith and optimism. Ontario and Western Canada have proven an eye-opener to

PROVINCIAL ELECTIONS ACT

Take Notice that I have received objections in writing to the undermentioned persons' names being retained on the list of voters for the Similkameen Electoral District
