Protests Against Trade Licence By-law

Very Little Money to Spend for Road Repairs This Year

A number of protests were read at last Friday's meeting of the city council against the Trade Licence fees which became due during July. The Okanagan Loan Co., claimed that certain concerns now under their control should be covered by their own licence. The council, however, considered that they were separate institutions and disallowed the claim. The B. C. Growers also protested against the raising of their licence from $5 to $25, which they claimed was exhorbitant for the class of business in which they were engaged.

A letter was read from a music teacher urging the injustice of requiring members of his profession to pay a licence fee. This led to some discussion of the case and also that of dressmakers, who went from house to house and worked by the day or hour, and it was eventually decided not to press the matter in these cases.

Mention was made of the bad holes which were beginning to appear in certain of the city streets. A case was named where one man had broken the reach of his wagon while another had broken a spring of his automobile.

Though the need of repairs was fully recognised, lack of money prevented the council from incurring any expense.

Alderman Copeland said he had been anxiously waiting to see if the council could grant him anything so that the Board of Works could fix up some of the worst spots. He considered, however, that compared with other places Kelowna had very little to kick about in respect to the streets.

After much discussion it was decided to allow Alderman Copeland $50 to fix up the worst places.

Alderman Rattenbury reported having received some complaints in reference to the offensive smells arising from the water discharged from the Steam Laundry. It was decided to direct the Laundry to consult with the Medical Health Officer and take such steps for the abatement of the nuisance as he might direct.

The clerk was instructed to write to Dr. Keller requesting him to kalsomine the city office and approaches thereto.

By-law 195, fixing Nov. 30th as the last day upon which persons paying the current year's taxes could obtain the usual statutory rebate. It was also emphatically stated that no extension would be granted on any consideration this year.

The matter of the forthcoming sale of land for arrears of taxes was also mentioned and it was pointed out that any persons paying such arrears before the 26th of August would avoid all expenses which would have to be incurred by advertising and other legal charges not to mention the undesirable publicity connected therewith.

The following accounts were passed for payment, after which the meeting adjourned until Friday, August 13th:

Imperial Oil Co. oil for health department	$3.31
Northern Elec. Co., supplies	15.62
C. C. Snowdon, p. h. supplies	49.80
Burne & Temple, legal fees	30.00
Miss M. Harvey, duplicate of cheque 445 issued during 1913	3.00
Palmer & Rogerson, supplies for park	8.75
T. McKinley, teaming	1.50
F. E. Small, supplies	13.50
H. Harrison, work for light department	21.75
G. H. Dunn, petty cash, June	44.40
Provincial Govt., fees for inspecting Elec. Light Plant for 1914.	25.00
C.P.R. freight	4.37

Sergeant and Mrs. Finch returned to Kelowna yesterday. Sergt. Finch will act as instructor of the local Volunteer Reserve Corps.

A new gold discovery east of Barkerville in the famous Cariboo country is absorbing attention just now as Prince George, putting even the war and the station site dispute in the shade, for the moment at least. All reports agree that the discovery is genuine and of large proportions and value.

Pope Issues Urgent Plea for Peace

Impassioned plea for cessation of the European war was made Friday by Pope Benedict to the rulers of the warring nations.

"In the Holy name of God, our Heavenly Father, and Lord Jesus, whose blessed blood was given as the price of human salvation, we beseech you, whom divine Providence has placed at the head of the belligerent nations, to end the bloody carnage which for a year, has dishonored Europe."

With these words, the Pope concluded his appeal, the first part of which reviewed the events of the war and dwelt upon the absence of attention with which previous appeals of the church had been received.

Wheat from Cariboo Country

Mr. E. S. Gardiner, who has just returned for a visit to Kelowna from his pre-emption in the Cariboo country, along the line of the new P.G.E. railway brought in some samples of wheat and oats grown there this year. The wheat is fall wheat and was cut July 12th. It is well headed and is about 4½ feet high, though some of it reached as high as six feet. This grain is interesting as it is the first ever raised in that part of the country. It was grown by a pre-emptor named West Bocking, who has a place not far from Mr. Gardiner's. It was not a large patch, only about a quarter of an acre, and scratched in with an ordinary garden rake, but it shows what the country will produce.

Mr. Gardiner is very well pleased with the character of the country in his district—near the 100-Mile House, and in the Horse Lake country—and is confident of a prosperous future when the line is completed.

Quite a number of Kelowna people, it might be mentioned, have settled in that neighborhood, amongst them, Mr. W. C. Hunter, Jack Copeland, the McPhee boys, Bert Wilson and others.

Red Cross Society

The headquarters of the Red Cross Society have requested that no letters, packets of cigarettes or chocolates will in future be packed with the socks as there is a duty on tobacco, and all such packets are removed before the articles are sent away.

All workers at the afternoon and evening classes are requested to bring their own scissors, needles and thimbles with them, as much valuable time would thus be saved in the arranging of the work.

The following articles have been sent to headquarters during the last month:

Thirty-one bundles fomentations; 24 bundles of dressings; 35 bundles of bandages (10 in each); 9 bundles of cup covers (100 in each); 60 bundles of 2 table cloths; 1 pair of socks; 1 pair mouth wipes (100 in each); 3 sheets; of bed socks; 2 pairs of pillow slips; 1 bundle of large pieces of linen; 26 plate covers; 7 shirts; 7 new towels; 26 nurses pockets; 1 bundle of tampons 3 bundles of dusters; 5 soft collars; 1 shawl; 10 many tailed bandages.

Mr. W. F. Bouvette Jr., accompanied by Mrs. Bouvette and their two children and Miss Jenny Lock, arrived in town Wednesday from Everitt, Wash.

Arrivals at Athens from Constantinople report that 3000 buildings, including the German Hospital, filled with wounded soldiers, were destroyed by fire last week.

Charles Becker was put to death in the electric chair Friday morning for the killing of Herman Rosenthal, the New York gambler. The former New York police lieutenant retained his composure and protested his innocence to the last.

Australia is ordering potatoes from British Columbia, according to information from Thomas Cuoningham, provincial fruit inspector. He says orders have been received for 10,000 crates. Australia has been suffering from one of her periodical droughts, which has affected the raising of foodstuffs. This is the reason for importing potatoes.

First Meeting of Shareholders of Kelowna Creamery Co.

Venture is Now Assured Success - Demand for Product Far Exceeds Supply - P. B. Willits is President of Board

After several lengthy though quite unavoidable delays, due to the requirements of proper legal procedure, the first statutory meeting of shareholders of the Kelowna Creamery, Ltd., was held Friday afternoon last in the Farmers' Institute rooms.

The principal business of course was the election of a permanent board of directors to take the place of the provisional board who have had charge of affairs up to the present.

A balance sheet up to June 30th, 1915, to which reference has already been made was formally adopted, and the following report of the provisional board read:

Dear Sirs,—The creamery is now in operation, and we consider that the company can be fairly called a "going concern."

Mr. Thomas, the manager, arrived here about the 1st of May, and gave us the benefit of his experience in installing the plant, and fixing up the building; it was not until the 1st day of June that cream was received, and it was near the middle of the month before the receipts reached a volume which gave us any indication of what to expect.

The accounts owing to patrons for the first month of operation amounted to over $900.00, and for the month of July will be over $1,100.00.

A market has been found for our product; as well as supplying the stores of Kelowna, butter has been shipped to Vernon, Nahun, Summerland, Penticton and Kaleden. Cream has also been shipped to Vernon.

The number of shares sold to date is 48 so that when these are called up and fully paid, there will be ample capital to put the company out of debt, and provide funds for a working account. Funds will have to be provided but we are of the opinion that it would be wiser to sell more shares receiving the initial payment of $20.00 only, than to call up the present subscribed capital.

At the next meeting of the board this matter will have to be definitely decided on. From advice received, and with the experience of the last two months to guide us, we would advise that, at this meeting you elect a strong board of directors, at least 15 in number. These directors should be representative of the different districts tributary to the creamery. The directorate could then elect a committee of management consisting of five, three of whom would form a quorum. The president and vice-president would be elected by the directors from their number.

We suggest that the following districts be represented on the board:

Okanagan Mission, K.L.O., Benvoulin, Rutland, Ellison, Glenmore and Bankhead, Woods Lake, City of Kelowna. (Directors' Signatures).

In discussing the suggestion as to the appointment of directors to represent each district, it was pointed out that there were several districts which were not as yet shipping cream or had not taken up shares, and as these would almost certainly soon be in line with the rest it was decided to defer the election of three of the directors for the present, so as to be able to afford such districts representation. Accordingly only twelve directors were appointed, the board being empowered to add three others, as far as possible from districts as yet unrepresented.

The following were elected to the board: P. B. Willits, M. Hereron, C. W. Dickson, J. W. Jones, A. Patterson G. S. Caspell, W. G. Benson, J. Leathley, L. E. Taylor, A. McQuarrie, S. A. Willcock, and E. M. Carruthers.

From these at a later directors' meeting the following were appointed an executive committee of management: P. B. Willits, president; M. Hereron, vice-president; L. E. Taylor, J. Leathley and S. A. Willcock, with W. G. Benson as honorary secretary, he having kindly consented to continue to act in that capacity.

Messrs. Crehan, Martin & Co., were appointed auditors.

Before adjourning the meeting passed votes of appreciation of the valuable work performed gratuitously in the incorporation of the company by Mr. W. G. Benson who had acted as secretary and by Mr. J. F. Burne, who had attended to the legal formalities. A hearty vote of thanks was also passed to Mr. M. Hereron, who as chairman of the provisional board had worked untiringly and was responsible for the sale of the greater part of the shares. Thanks were also ordered to be forwarded to the Department of Agriculture for the assistance rendered by Messrs. H. Rive and T. A. F. Wanko of the Dairy Branch.

With the appointment of the new directorate the creamery will be placed upon a more definite basis, and the success which has attended it so far will no doubt be still further increased. Evidence is not wanting that the attention of the government and of people in all parts of the provinces is centred upon this venture in Kelowna district, and its progress is being watched with the keenest interest. Happily it bids fair to fulfil the most sanguine expectations, and vindicate the claim that in this district we have the makings of a magnificent farming country.

At the present time the great difficulty is not as was predicted to find a market for the creamery's product, but to keep even immediate local demand anything like satisfied. No sooner is a batch of butter out of the churn than it is all gone, and the storekeepers calling for more, which it is impossible to supply. In addition orders are coming in from outside points. The only remedy for this, of course, is to increase the supply of cream, and this is one of the pressing problems.

During July over 3000 pounds of butter were made and sold in addition to 1000 pounds of butter fat in the form of ice cream and sweet cream. The month's working too has clearly demonstrated that the creamery can be run at a profit.

On the 10th of the present month there will be handed out in cheques to the farmers the respectable sum of $1,100 compared with $900 for last month. Don't you think you'd better get on to the pay roll?

A GERMAN "42" THAT FAILED TO EXPLODE

The photograph shows how the famous 42-centimetre shell compares with the average French infantryman. This shell fell near Verdun without exploding, and is now on exhibition at the Invalides in Paris. It is 5 feet 7 inches high, a trifle more than 16½ inches in Diameter and weighs upwards of 2,000 pounds.

Successful Dance for Red Cross Funds

The local Red Cross Society are greatly indebted this week to Miss Katie Lloyd-Jones and Miss Eva North, these two energetic young ladies having raised no less than $71 for the fund. T heir method was the organization of a dance in the Aquatic Pavilion, and this turned out not only to be a profitable affair for the object in view but also a most successful and enjoyable function, and afforded a good deal of pleasure to all who were wise enough to purchase a ticket.

To begin with Tuesday evening was delightfully fine and the prospect from the lake side pavillion, always beautiful was unusually enchanting. The room was prettily decorated in patriotic fashion with flags and streamers and colored lanterns and the whole scene was a dazzling intermingling of light and color.

The dancing commenced at 8.45 with Mr. H. Tod Boyd at the piano, he being assisted later at intervals by the youthful promoters of the affair, Miss Lloyd-Jones and Miss North. Mrs. Dr. Boyce, Mrs. DeHart, Mrs. D. Lloyd Jones and Mrs. North acted as chaperones. During the evening light refreshments were served to the guests.

Miss Lloyd-Jones and Miss North are naturally highly pleased with the success of their venture, and desire to thank all who so readily rendered them assistance, not forgetting the Aquatic Association for the use of the pavilion.

A general order has been issued to close all the retail markets owned by Swift & Co., in Canada.

Prussian-Polish papers received by the London Times announce the German Emperor will make his entry into Warsaw the occasion for proclaiming a new independence in Poland. The announcements in question, which the Times says are apparently inspired, declare Emperor William will include in the proposals for a new and independent state of Poland, not only the Polish provinces of Russia, but also the Galician domains of Austria and certain German territory including the Duchy of Posen and Dantzig, as a free port.

Since the war began 10,442 men have enlisted in B. C.

Owing to continued dislocation of all branches of the Hudson's Bay company's business through the war, the governor and committee have decided not to recommend payment of a dividend this year on the ordinary shares.

Hon. Martin Burrell, minister of agriculture, has partially lifted the embargo on live stock shipped from the United States to Canada. The embargo was due to the outbreak of foot and mouth disease in several American states. By the new regulations, which went into effect on August 2, shipments of live stock will be permitted from all of the western American states.

Kelowna Regatta Next Thursday

Military Band Will Provide the Music—Good Program Arranged

The ninth annual regatta will be held in Kelowna on Thursday next, the 12th inst. A great many who usually participate are absent this year so the events will be run off in one day. It is felt by the directors of the association that in these strenuous times every encouragement must be given to athletic exercises and sports among our young people and while it would have been difficult to secure sufficient entries locally to fill the different events, the success of the regatta is already assured owing to the fact that a strong contingent is coming down from Vernon with the 47th band.

This band (the finest in British Columbia) has been secured after considerable negotiation. It numbers some 26 performers and in order to help defray the expense the band has agreed to give a concert in the park on Wednesday night, the evening before the regatta. This will be the first military band concert ever given in Kelowna and judging by the enthusiasm already shown, it will be attended by everyone in the district. No admission charge will be made but a collection will be taken up in the park.

There are thirty events on the list this year as against forty-seven in last year's program, but great care has been exercised not to eliminate any which might cause disappointment. Ladies will find plenty of opportunity and there are six events for boys and girls.

No admission will be charged for entrance into the park this year. Entrance to the Grand stand will be 50 cents. Reserved seats 75 cents.

(Continued on Page 6.)

I. O. G. T. INSTALL OFFICERS

On Tuesday evening last at Unity Lodge No. 90, I.O.G.T., the officers for the quarter were installed by Bro. W. S. Fuller, Grand Lodge Deputy, as follows:

C.T.—Bro. Geo. Thomlinson.
P.C.T.—Bro. W. B. Pearson.
V.T.—Sis. H. Ellis.
C.—Bro. A. Welch.
Secy.—Bro. R. Bouvette.
A.S.—Sis. J. Ritchie.
Treas.—Bro. T. Pitt.
F.S.—Bro. W. Bouvette.
M.—Bro. Geo. Thompson.
D.M.—Sis. F. Lancaster.
G.—Sis.—Bennett.
S.—Bro. S. Cox.
R.—Bro. Welch.

Bro. W. B. Pearson was recommended for Grand Lodge Deputy for the year.

Rutland News

(From our own Correspondent.)

As the result of a "Missionary Day" at Rutland and Ellison on Sunday in connection with the "Zenana Bible and Medical Mission" of which Miss M. A. Campbell is a representative and spoke eloquently and earnestly of the needs of the Women of India, both Spiritual and Temporal, there has been formed a committee consisting of Mrs. Johnston, president; Mrs. Hartley, vice-president; Miss Clever, treasurer; and Miss Rae, secretary; the two latter to call upon the families of the neighborhood. Being interdenominational it is hoped that all will contribute. The smallest contribution will be much appreciated. As it will show interest and willingness to help on the great and good cause. "In as much as Ye do it unto one of the least of these little ones Ye do it unto me" say our Lord Jesus.

The commission charged with the duty of selecting and enlisting munition workers for the old country factories are in town today and are holding a session in the Board of Trade office.

The Butter Commissioner of Saskatchewan has secured a "war order" of 450,000 pounds, or 18 carloads of butter to be shipped to the old country. The price is $125,000 or near 28 cents per pound.

History Repeats Itself in Warfare

The Romans, who were the first to make a real science and art of war, were responsible for one of the principal features in Western Europe— the fortified frontier. This does not mean the ordinary fortified frontier as it was known up to 1914—a series of strong fortified camps with untrenched gaps between them; though this sort of a frontier the Romans did have in the East, where their empire bordered the great State of Parthia. It was in the southwestern Germany that the Romans built, as a protection against the inroads of German barbarians, what was the prototype of the line of trenches which today runs from Switzerland to the North Sea. And just as the German trenches in France and Belgium are to all intents and purposes the frontier of the German Empire, so the Russian trenches—the lime Germanicus—were part of the frontier of the Roman Empire.

The system of a frontier defended by great army camps placed at intervals was in common use, as has been said, on the eastern and northeastern—the Parthian and Danubian—frontiers of the Roman Domain. On the south and west the African desert and the sea shut it off; the wide and deep Rhine was sufficient protection against the Germans in its lower courses. There remained the frontier in Britain and in southern Germany. The treatment of the two was slightly diffierent, that in Germany being the closest approach to the modern trench lines.

Beginning under Vespasian in 74 A. D. and continuing for nearly 100 years the Romans pushed forward into the salient angle between the Rhine and the Danube—the modern Baden and Wurttemberg—and finally extended their domain over all this corner of Germany. Each new frontier as formed was fortified, and the final boundary, which ran from Bonn on the Rhine to near Regensburg on the Danube, with an obtuse angle r unning down into Roman territory, was fortified by the limes Germanicus.

The Palisade Ditch

This was in two sections. The Northern—known in ancient times as the Pfhalgaben, or palisade ditch —ran from the east bank of the Rhine, near Bonn, across the Taunus Mountains and the Main in a general southeasterly direction south to near Stuttgart.

It consisted of an earthen wall, with a ditch—the trench being, of course, on the outside and the wall being the position of the defenders. The wall was topped by a palisade, and at intervals there towers—burgi—occupied by small bodies of troops, who patrolled the intervening sections of wall. At longer intervals were some redoubts—castella—where larger bodies of guards were stationed. ...

One of the peculiarities of this frontier—which in its details represented, of course, an artificial boundary through what at the time was very sparsely settled country— was that a stretch of about fifty miles in length ran in a straight line due north. It has been referred to in English and German writings as one of the earliest known boundaries on the American plan.

Near Stuttgart the Pfhalgraben meets Teufelsmauer—the Devil's Wall —which was the name given in mediaeval Germany to the other half of the limes Germanicus— a rampart of stone which extends to a little south of east till it meets the Danube near Regensburg. There were forts at intervals to strengthen this, and in the main it was apparently garrisoned much like the Pfhalgraben. In the third century, the custom arose of settling immigrants, or persons from elsewhere in the empire along the wall demanding military service in its defence for them to exchange for the lands granted. This system of militia service apparently did not work very well, perhaps because there was often too much affinity between the settlers and the Germans on the other side.

The limes Germanicus proved well enough as a customs barrier and a wall to keep out small parties of outlaws, but as a defence against large hordes of invaders it was of little use, and finally fell during the barbarian in- finally fell during the barbarian in- Roman frontier went back to the Rhine and Danube. Apparently the thing that lost the limes to the Romans was the same weakness which has made the Germans give ground at some points on the western trench line in the past few weeks—the fact that almost all the defenders were strung out along the line and that there were no adequate reserves to reinforce the points threatened.

Modern Frontier Defence

In Scotland, the better-known Hadrian's Wall was the Roman frontier for three centuries. This was a stone wall with a mound and ditch some distance in the rear, and still further back a line of detached forts. Apparently the wall itself was only a customs barrier and a sort of police line, and the forts furnished the real protection.

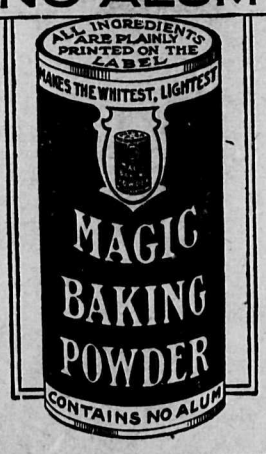
Another similar line was the Great Wall of China, erected according to tradition by the great Emperor Che Hwang-Tse in the third century before Christ, as a barrier against the Heung-Nu Tartars. Apparently there really was an earthen wall built at this time and for this purpose which follows much of the line of the present wall, but the Chinese wall as it stands at present, was built in the fourteenth century. It is 1,700 miles long, thirty five feet high, twenty-one feet wide, and faced with granite blocks. There are numerous towers. This wall, has been allowed to fall into decay except in certain stretches which are preserved for customs purposes.

The chief fault with all these fortified frontiers was that they spread out the body of men which manned the walls over a long stretch of territory, and hence reduced a force originally large to a point where only a few men could be gathered at any given place despite the towers and redoubts. Hence they were valuable as a defence against small parties and could do little against well-organized or large bodies of assailants. The Chinese recognized this, and the walls were only an outwork designed to hold off marauders or delay large forces of hostile barbariant u ntil the legions in the fortified camps far in the rear could come up. But the obvious deficiencies of the system were so great that strategists of the nineteenth century and earlier came to the conclusion that isolated fortresses which could serve as the bases for large field armies were the only proper defence of a frontier. This view worked well enough till the specialization of the the modern German general staff proved that the most successful method was a combination of the two.

The Hague Echo Belge says that the population of Brussels would wear a piece of torn paper on August 4th in commemoration of Von Bethmann-Hollweg's now famous remark concerning the Belgian neutrality treaty.

British inventors have perfected a secret method of nullifying the effects of the noxious gases which has been employed by the Germans. A chemical solution has been produced, which will render harmless the deadly fumes which have been used. It is understood that the solution will be sprayed on the enemy's gas waves in much the same was as chemical class rooms are purified of the odors of sulphurated hydrogen and similar gases, and that a re-agent for the German gas has been discovered.

NO ALUM



The Kaiser Says His Conscience is Clear

Emperor William has issued a long manifesto to the German people on the occasion of the anniversary of the outbreak of the war, according to a despatch received in Amsterdam from Berlin and forwarded by the correspondent of Reuter's Telegram Company. In the manifesto, which was issued from the main headquarters of the German army, the Emperor says, in part:

"One year has elapsed since I was obliged to call to arms the German people. An unprecedented time of bloodshed has befallen Europe and the world.

"Before God and history my conscience is clear. I did not will the war. After preparations for a whole decade the coalition powers, to whom Germany had become too great, believed that the moment had come to humiliate the empire which loyally stood by her Austro-Hungarian ally in a just cause, or to crush it in an overwhelming circle. No lust for conquest, as I already annou nced a year ago, has driven us into the war.

"The consciousness that the fight was forced upon us accomplished miracles. Political conflict of opinion became silent; old opponents began to understand and esteem each other; the spirit of true comradship governed the entire people.

"Full of gratitude, we can say today that God was with us. The enemy armies who boasted that they would enter Berlin in a few months are with heavy blows driven back far east and west. , . . .

"The communities of agricultural, industry, commerce, science and technical art have endeavored to soften the stress of war. Appreciating the necessity of measures for the free intercourse of goods, and wholly devoted to the care of their brethren in the field, the population at home has strained all its energies to parrying the common danger. . . . .

"In heroic action we suffer and work without wavering until peace comes, peace which offers us the necessary political and military economies and guarantees for a future which fills the conditions for the unhindered development of our producing energy at home and on the free seas. Thus we shall emerge with honor from a war for Germany's right and freedom, however long the war may last, and be worthy of victory before God, who we pray, may bless henceforth our arms."

How Wounded are Received in Red Cross Hospital

The following account of one of the details of the daily routine of a Red Cross hospital will show the military precision with which these hospitals are conducted.

The hospital is warned before hand when a train load of wounded is expected. Just before the train is due, the Red Cross buglers sound the "Fall In," in the central square of the hospital. The orderlies required are paraded by the Sergeant Major and proceed to the station platform.

The Registrar enters the train and distributes tickets marked "Medical," or "Surgical" as the case may be to the patients who are to be assigned to this particular hospital. As soon as this has been done and the "nominal roll" taken during which time a mug of beef tea is distributed to each patient, the orderlies bring stretchers and wheel chairs for the conveyance of the wounded to the Red Cross hospital.

At the entrance gate the commandant, the senior surgeon, and the senior physician are stationed, to decide in which ward each case is to be placed. A hospital kit is assigned to each patient, as he arrives, consisting of a blue hospital suit, vest, day and night shirts, socks, handkerchief, towel and slippers. To distinguish the blue suit from that worn in military hospitals, the one worn by the Red Cross patient has a red band around the sleeves, and the trousers have a blue instead of a white lining.

The dress worn by the patient on entering the hospital is then taken by the orderlies to the Foul Linen Store. From there it is taken to the disinfector. After disinfection, an inventory is made of it, and it is held in the pack store until the patient leaves the hospital.

Probably there never was a public fund administered with greater precision and discipline than the Red Cross Fund. The public can be well assured that every dollar they contribute is carefully expended. The great need of the Red Cross combined with this assurance of careful administration should stimulate public generosity to even greater efforts.

Sponges of Every Kind

When you require a Sponge we are sure you will appreciate the selection we afford you—

¶ Bath Sponges of Every kind and size.

¶ Buggy Sponges of the grades you want.

¶ Grass Sponges for boats and rough use.

¶ Toilet Sponges, Surgeons' Sponges, &c.

In Engine Room When Battle Rages

A correspondent of a weekly exchange writes the following vivid description of the engine room of a war ship during the progress of a battle:

The bell of the engine room telegraph rings out loudly and insistently, and the engineer glances at it shurply. But smart as has been his action, that of the engine room artificer has been smarter, and before the words, full speed ahead, pass the engineer's lips the throttle is half way open.

Ting-aling-aling. This time it is the telephone bell which is clamoring for attention, and a stoker launches himself across the slippery plates at the instrument. He listens for a moment then:

"Shut down sir," he reports to the engineer.

That officer repeats the order, and almost immediately the various indicators are telling the four stokeholds to close all water-tight doors.

The battle has commenced.

Let us, as a matter of interest, imagine that we are in the engine room of a modern dreadnought in action. On each side of us, unobstrusively stowed away in their mahogany brass-bound cases are the great turbines. Their humming, though we cannot see them, fills the vast space with the sound of a million bees let loose. Near each one hovers a grimy stoker, oil can in hand, and his duty is to see that these monster humming tops do not lack for lubrication.

Right in front, on the foremost bulkhead of the engine room, are the telegraph dials and the telephones, each of which is in connection with the bridge, and under the direct control of the captain. These are the things which tell us how the fight is going, for the keen engineer can read signs and portends in the changes which are rung upon the telegraph dials.

A tremendous thing is the fighting strain. It is bad even up in the great turrets where men play their parts in the grim drama and hurl death and destruction at the foe, but down here, where one does nothing but wait for orders, it is terrible. Every time the big guns fire one can feel the big ship quiver, and one can also hear the thud, thud of the enemy's shells as they strike the ship.

The only man who does not seem to feel the strain is the one who has apparently the least to do, and that is the engineer, He, however, is busily doing mental arithmetic. He knows how many revolutions his screws are doing per minute, and he realizes that as yet she has still a little bit of speed up her sleeve.

In Range of Enemy.

He has just received a private hint from the bridge that she's doing all that is necessary at present; that she is holding the enemy and keeping her well within range.

By and by that last half-knot may asked for, and he is calculating how much speed he will be able to present the captain with when the final effort is asked for. No one knows but he, and he won't tell.

There seems to be a kind of waiting expression on most of the faces and if they could tell you what they were all waiting for it would surprise you. Shut up as they are in a small steel box full of machinery, they are not thinking of the chance of an enemy's projectile coming through and killing them, nor are they waiting for death to come to them in some other manner. What they are dreading is that something should go wrong with their beloved engines, something that would prevent their doing their bit in the fight.

They are listening, ever listening, for the hiss of escaping steam which will tell them of a main steam pipe hit or carried away; for the shot that might smash one of the boilers into small pieces: for the rattle of the steering engine as the rudder is blown away and the ship hangs, without a guide, in the balance.

And then, with a sickening sidelong twist and a rattle of steering engine, the floor of the engine room takes on a sickening slant. The ship has made a sudden scute turn.

Submarines

The engineer's face turns from a cherry, optimistic red to a fear-stricken sallow green.

"My God!" he mutters. "Submarines!"

Every man in that engine room and every stoker in the stokeholds knows what that sudden and horrible twist means. It means that the ship has commenced a quadrille with death; that under-water craft are seeking to end her life and the fight at the same time.

Hard a port. Hard a starboard. Amidships for a second, then hard over again. The helm seems to be possessed. And at every moment the deck of the engine room slants this way and that as the giant rudder presses against the water and brings the ship round on her heels, as they say in the navy.

The strained look has gone now. Everyone is eager and anxious to do but one thing, and that is to obey the orders which come down from the bridge as fast as they possibly can be obeyed. The bridge is having an anxious time, but the men in the depths trust it and reckon it up to the dealing with the biggest flotilla of submarines afloat.

Then, while the ship is running for all she knows, the unexpected happens. With a louder and more sudden roar than ever, the steering engine rattles over to hard a port. At precisely the same time the telegraph rings, full astern, starboard engine; full ahead, port. The ship takes a horrible heel as the rudders, two of them, grip her; the port screw slows down preceptibly as it feels the mighty column of water deflected from the rudder and the starboard one hums along smoothly as it feels the reversed turbine's thrust.

And, even as they spin round the men can hear the guns putting in good work and blazing away for all they are worth. Ten minutes later the enemy's fleet, or what are left of them, are steaming for harbor again as fast as they can go.

Modern Trench Warfare

The close contact of the enormous forces engaged in this war, equipped, as they are, with the most destructive weapons known, is possible only by the highly developed modern trench.

Each side can completely cover the ground before it for several miles at least, and effectually prevent the open advance of any considerable number of the enemy. Because of the powerful search-lights, rockets, star-lights and ather illuminants, it is equally true at night. So, the contending armies have for the most part, in the western field, resorted to sapping. The engineers will select a sheltered spot such as the leeward side of a hill, or a gully or ravine. They then start a trench leading toward the enemy line. It will continue directly toward the enemy line until it reaches a point where it would be exposed. Here it makes a turn to prevent exposure. From such first turn it zig-zags toward the enemy, the continual change of direction affording complete protection to every portion of the trench. From this leading-in trench branches are led off, like the fingers of the hand, but are directed in zig-zags toward the enemy's battle line. At the end of each of these is a firing trench parallel with the enemy's front. These firing trenches are about five feet deep and wide enough for the men to move about in. It is from these exposed trenches that the enemy's attacks are repulsed by rifle fire, and from them that the last dash at the enemy takes place. They are too exposed for a force to remain in them longer than necessary. A very short distance in the rear of them is the first line of cover trenches. These are deeper and act simply as passage ways connecting a series of underground bomb-proof rooms or chambers. In these the trench guard waits. At the first word they rush from their shelter to man the firing trench.

Back of the first line shelter trench there are successive lines of similar trenches for reinforcements. The men in the first line shelter trench remain only 48 hours at a stretch, and are then relieved for four days, at the end of which time they again return. In the more stubbornly contested sections there are as many as ten or more successive lines of shelter trenches all branching offi from the leading-in trenches. As far as possible the trenches themselves leading to the shelter or bomb-proofs are roofed in by timbers covered with earth and sod and thoroughly protected, in other sections by heavy bomb-proof netting.

As the trenches advance toward the enemy the older ones are improved and made more substantial. Their walls are reinforced, and they are faced with concrete and drains are put in to carry off the rain water. Where possible, even water mains have been laid to supply water. Before long these trenches become semi-permanent fortifications. Wherever an enemy trench is taken it is simply made over and converted.

The area directly in front of each firing trench is, of course, filled with all possible obstacles and entanglements. The favorite of these is barbed-wire, spread, entangled and twisted as much as possible. When cut it simply curls up and makes more entanglements. It is when the enemy's charge is caught in these entanglements and checked that the rifle fire from the trenches is most deadly.—North Shore Press.

Flat denial that Turkey desires to make separate peace with the Allies was made recently from the Turkish legation at The Hague.

Printed Butter Wrappers

According to the new Dominion Government regulations all farmers who sell butter either to the stores or privately, are required to have it properly covered in a wrapper on which MUST appear in prominent letters the words "DAIRY BUTTER."

The fact is also emphasized that all butter in such packages must be of the full net weight of sixteen ounces, and in default of same a fine of from $10 to $30 for each offence is imposed. Whey butter must be so labelled even when mixed with dairy butter, and dairy butter retains its label though it be mixed with the creamery product.

You can be supplied with neatly-printed wrappers for your butter at the Kelowna Record Office, for the following prices:

100	PAPER & PRINTING INCLUDED	$1.50
200	" "	2.00
500	" "	2.75
1000	" "	3.75

These prices include Both the Paper, which is the best obtainable for the purpose, and the Printing of same. Please note this.

TOWN AND COUNTRY NOTES

Mrs. A. Edwards and baby were passengers to Vernon Tuesday.

* * *

Mr. Reginals F. Nalder left Wednesday for the old country.

* * *

Mrs. E. L. Clement left today for San Diego, Calif.

* * *

Miss Pilkington left yesterday on a visit to Victoria.

* * *

The B. C. Growers are operating a packing shed at Penticton, shipping peaches and apricots.

* * *

Miss G. Gowan returned on Saturday from several weeks holiday spent in the east.

* * *

The Mayor and fire chief of Vernon have lately been receiving anonymous letters threatening to start fires in the city.

* * *

Don't forget that August 12th, Regatta Day is also Tag Day for the Red Cross and the ladies of that Society are depending upon the citizens to raise a respectable sum on that occasion.

* * *

Some twenty-seven Kelowna citizens went by the boat yesterday to visit the celebration at Vernon of the anniversary of Germany's declaration of war. In addition to these, of course, a large number went up by car.

* * *

Service will be conducted in the English church at Okanagan Mission on Sunday morning at 8 a.m., and in the East Kelowna school house at 3 p.m.

RAINFALL

Total precipitation 1.89

The Rev. J. C. Switzer was a passenger to Armstrong Tuesday.

* * *

Mr. A. S. Town, of Peachland was here Tuesday morning, leaving later for Winnipeg.

* * *

Mr. J. F. Petersen left Tuesday for Wetaskiwin, Alberta, where he will stay until his crops are harvested.

* * *

Word was received Tuesday by Mrs. Forrest that her husband and Mr. W. C. Aitken, who left together some two weeks ago for the old country had arrived safely at their destination.

* * *

The monthly meeting of the Women's Institute will be held at the Board of Trade rooms on Saturday, August 7th at 3 o'clock, when a demonstration on bread making will be given by Mrs. Prowse and a social time will be enjoyed by all ladies caring to attend.

* * *

Henry, Howard and Edwin Jamieson who have been visiting their sister Mrs. S. J. Craig at Rutland during the past week left Monday for the coast, from where they will return home via. Seattle, Mrs. Craig accompanied them on a visit to her brother who lives at Pugent Sound.

* * *

Mr. Jas. Campbell and party who spent last week autoing about the country returned home Sunday evening after a very pleasant trip, in which they journeyed via Penticton and Oroville south into Washington. On the return trip they visited Princeton, Merritt, Kamloops and Vernon.

* * *

Mr. and Mrs. Dan McLean, formerly of Kelowna, but now residents in the beautiful Vancouver suburb of Kerrisdale, came in Monday. They intend to spend a month in Kelowna amongst their old friends and acquaintances and have rented a house over the creek.

* * *

The pictures will be shown as usual on Thursday at the Opera House, when a fine five reel show has been selected. Theatre patrons are assured of a good entertainment. The program will include a two-reel subject entitled "Gold." A fine drama of the North West, with Harry Benham, hero of the "Twenty Million Dollar Mystery" in the leading role. A one reel drama, entitled "The Sheriff's Choice," and a fine comedy, which will surely please all.

* * *

For the past three Sunday's the Presbyterian and Methodist congregation have united their services in the Methodist church in the morning and in the Presbyterian church in the evening. Rev. A. Dunn conducting services while Rev. J. C. Switzer and family holidayed at Manhattan Beach. Next Sunday the services change to the Presbyterian church in the morning and the Methodist in the evening and for three Sundays Rev. J. C. Switzer will conduct the services while Rev. A. Dunn takes his holidays.

Ashley Sterne, Amateur Poultry Farmer

Having occasion some time ago to remark to a friend that eggs were still very high—in the financial sense, not in the olfactory sense— my friend asked: "Then, why don't you keep chickens?" Though nobody had asked me that riddle before, I nevertheless guessed the answer first time. "Because I haven't got any chickens to keep," I replied.

But I could not help thinking that chickens in times like these might be made a very profitable investment; so I determined to buy one. Accordingly, I went to a chickenmonger and bought an entirely new chicken fresh from the shell. The chickenmonger wanted to sell me a brood, but as I had had no previous experience of chickens, and didn't want to waste any, I had to tell him that one was enough to start with. He replied that one chicken wasn't much good unless I merely intended to use it as a pen-wiper. It would pine away and die, he said. However, he finally wrapped it up for me, and I carried it home.

When I got there I at once undid it, and as it was hatched I thought I would count it just to make sure it was there. And there, sure enough, it was. So I put in in a bird-cage, and gave it a mixed biscuit to eat. It ate it all except the paint. Then I gave it some water with a rusty nail in it (to prevent the chicken from moulting) fixed a piece of groundsel between the bars, and hung the cage up in my dining-room window over a pot of spiraea.

It soon became acclimatized to its new surroundings, and caused a good deal of mild excitement amongst the neighbors. One day, when I had put the cage on the window sill in order that my chicken might enjoy the fresh air and admire the special constable who patrols our road, a short-sighted old lady who lives next door, and who was under the impression that the bird was a canary, spent the whole of the morning crying "Sweet! Sweet!" to it at frequent intervals in order to encourage it to sing. Wilkinson, my cat, also labored under the same delusion, for I noticed that he tried on no less than seventeen occasions that day to push his paw through the bars and stroke it.

Cats like stroking canaries. I had one once named Colman, and Wilkinson was so fond of stroking it that one day when I was out and Colman wasn't looking he stroked its head off and hid the body.

However, no such demonstration of affection interferred with my chicken's progress, and every day it grew fatter and featherier until at length I thought it was about time it began to pay dividends, and for this purpose I decided to remove it to more spacious premises. I therefore went to work and made a nice airy openwork coop for it, containing a disused blackbird's nest which I had found ready-made in a hedge in the garden. As soon as the coop was finished I went to transplant my chicken, but unfortunately it had grown so enthusiastically that it was too big to get through the door of the cage. After a terrific struggle I managed to get its head, neck, merry thought, and one of its feet (I forget which) out all right, but the rest of the bird remained firmly wedged in the doorway. At one time I really feared that the poor thing would have to spend the remainder of its days half in the cage and half in the coop, but finally, with the aid of a shoe horn and some lubricating oil, I succeeded in effecting the transfer to its new quarters.

I was pleased to note that it immediately went and sat down on the nest I had provided for it. I expected it would feel a little tired, but I nevertheless hoped that it would combine business with pleasure and improve the shining hour by laying a trial egg. I gave it a quarter of an hour's start, and then requested it to get up; but it hadn't begun to lay even the yolk, much less finished the job, and (to cut a long story short) it has never laid an egg from that day to this. I didn't understand it at the time; but a poultry fancying friend has since informed me that I couldn't have expected a buck chicken to lay an egg—that's the duty of the doe.—Tit-Bits.

Corporal.—That new recruit used to be a clerk.

Sergeant.—How do you know?

Corporal.—Every time he stands at ease he tries to put his rifle behind his ear.

A group of colored people were discussing the war. Uncle Ephraim's sympathies were all with the Allies.

"Man," announced he, "has you heard 'bout them Allies? They's got a gun what kin hit you if it's twenty-three miles off."

"Lawsie, that ain't nothin'," sneered a partisan of the opposite camp. "De Germans, dey can hit you if dey jess has yo' address."

Botanical Notes

A useful pamphlet on "Weeds and Weed Seeds" has recently been put forth by the Dominion Department of Agriculture, being Bulletin No. 98, obtainable from the Publication Branch of the Department at Ottawa.

After detailing results of investigation by officers of the Seed Branch as far as grain, grasses and clover are affected, and how the seeds are spread, and in what quantities they have been found in different localities covering four provinces, the Bulletin proceeds to describe the nature and methods of eradication of 114 varieties, of which 28 are classed "noxious" under the order-in-council of 1911 authorized by the Seed Control Act, passed in the same year. Each of the 28 and each of the remaining 86 are not only minutely described, but an exact illustration of weed and seed accompanies each description. The 28 are Wild Oats, False Wild Oats, Common Darnel, Docks (Curled, Clustered and Bitter), Purple Cockle, Campions (including Catchfly, and Bladder Campion), Cow Cockle, Stinkweed, False Flax, Ball Mustard, Wild Radish, Wild Mustard, Hare Ear Mustard, Tumbling Mustard, Wild Carrot, Field Bindweed, Clover Dodder, Blue Bur or Stickseed, Blue Weed, Ribgrass, Ragweeds (Great, Common and Perennial), Ox Eye Daisy, Canada Thistle, Chicory, Sow Thistles (Perennial or Field Sow, Annual or Common, Spiny-leaved or Prickly Sow). The other 86 are not regarded as quite so serious, although they, too, give trouble in grain crops, hoed crops, meadows, pastures, lawns and on roadsides.

The Bulletin is of interest to all cultivators and botanists.

The follow continue the list of local plants:

115.—Great Mullen, (Verbascum thapsus). In height a giant among weeds. Woolly all over as the name implies. Flowers primrose-yellow, in a spike. Parts in fives. Fig wort family.

116.—Swamp Persicaria, (Polygonum Amphibium). Perennial by creeping rootstocks. Leaves ovate-lanceolate. Flowers deep rose-pink, in a clustered spike. Buckwheat family.

117.—Hart Wright's Persicaria (Polygonum Hartwrightii). Closely allied to the above. Leaves lanceolate. Leafy. Rough-hairy on the sheaths and bracts Flowers rose-pink. Moist soil.

118.—Knot Grass, Door-weed, (Polygonum aviculare). Small narrow leaves taking on a white-bluish tinge. Flowers inconspicuous.

119.—Smooth Lyne-grass, (Elymus condensatus). The grass growing from 2 to 10 feet high in patches of alkali soil, flourishing where other plants find the saline condition too strong; so that it does not deserve a hymn of hate as a robber weed.

Fernie is offering the citizens $4643 worth of debentures in $100 lots at 92. They bear 5½ per cent. interest.

The irrigation ditch at Oroville will be sixty-five miles long, and put water on 10,000 acres near that dry city.

Chickens caught running at large in Kaslo in future are to be impounded. It costs 25 cents per head to get them out.

The Okanagan Jam Company, Limited, of Summerland, has made an assignment for the benefit of the creditors, the assignee being Wellington C. Kelley of that place.

Important Changes in Service Examinations

The Militia Council of Ottawa has made some considerable changes the regulations regarding the qualification of recruits offering for service with the colors, which are expected to add largely to enlistment.

The height requirement is changed from 5 feet 4 inches for infantrymen to 5 feet 2 inches, and for artillery from 5 feet 6 inches to 5 feet four inches. The minimum chest measurement is to be 33 inches. There will be in future only one medical examination and that at the place of recruiting.

Men suffering from bad teeth and otherwise medically fit will be supplied with new sets at the expense of the government, the work being done by the dental corps.

Slight physical defects which may be removed by minor operations will be removed at the government's expense by the army medical service. It is estimated that in the past more than fifteen thousand men have failed to secure places in the force because of regulations which have now been relaxed.

Cheer Up!

According to the Montreal Journal of Commerce, War orders amounting to the sum of $425,000,000 have been placed in Canada prior to June 1st. Such orders are daily increasing and are limited only by the capacity of our factories which are daily increasing their output. From present indications the Prairie Crops will net the farmers of these provinces the enormous total of $300,000,000. The beneficial effect of this will be felt in British Columbia.

OUR
$20,000 Stock Reduction Sale

gives you an opportunity to purchase at a special DISCOUNT of 20 PER CENT. goods that are daily increasing in value, and still greater discounts on special lines in which we are over stocked, for instance :--

Carpets Cut 25 p.c.
Our whole Carpet Stock for July and August will be Reduced 25 per cent.

Cut Prices on Linoleum
On Linoleums the following cuts are made :

Nairn's Inlaid Linoleum Reduced from $1.10 a yard to .....85c. a yard
Nairn's X Quality Linoleum, Reduced from 75c. a yard to..... 60c. a yard

Nairn's No. 3 Quality Linoleum Reduced from 60c. a yard to..... 45c. a yard

Wall Papers and Burlaps
Our entire stock of Wall Papers and Burlaps offered at Two-Thirds of their regular price.

Morris Chairs, etc.
Morris Chairs, Couches. Davenports and Easy Chairs are reduced 25 per cent.

White Sewing Machines reduced from $65 to $35
The best machines in the world. This price is away under cost, but as we have 40 in stock and little chance of selling them at the ordinary price, we are willing to make this sacrifice rather than pay interest on the investment, storage, insurance, and taxes.

Office Furniture
There is a slump in the sale of office fixtures at present. Our stock of Desks will be sacrificed at Two-Thirds of the original price. You can now buy a Solid Oak Pedestal Desk for $14.50

Buffets
Buffets in Surface Oak sell as low as $10.50

Oak Morris Chairs
Oak Morris Chairs with Reversible Cushions for $6.50

Iron Beds
Iron Beds, full size with heavy 1 1-16 in posts Reduced to $2.95

Blankets
Wholesale quotations on Blankets show an advance of 40 per cent.
Here is an opportunity to lay in a stock at the old price less 20 per cent. discount.

All our goods are High-class and must be seen to be appreciated.

These Prices are strictly Cash and will be discontinued Sept. 1st.

but as many of the lines will be sold out long before that date, PLEASE CALL EARLY.

Terms Cash

J. C. STOCKWELL - - Auctioneer

SYNOPSIS OF COAL MINING REGULATIONS

Coal mining rights of the Dominion in Manitoba, Saskatchewan and Alberta, the Yukon Territory, the Northwest Territories, and in a portion of the Province of British Columbia, may be leased for a term of twenty-one years at an annual rental of $1 an acres. Not more than 2,500 acres will be leased to one applicant.

Applications for the lease must be made by the applicant in person to the Agent of Sub-Agent of the district in which the rights applied for are situated.

In surveyed territory the land must be described by sections, or legal subdivisions of sections, and in unsurveyed territory the tract applied for shall be staked out by the applicant himself.

Each application must be accompanied by a fee of $5 which will be refunded if the rights applied for are not available, but not otherwise. A royalty shall be paid on the merchantable output of the mine at the rate of five cents per ton.

The person operating the mine shall furnish the agent with sworn returns accounting for the full qunatity of merchantable coal mined and pay the royalty thereon. If the coal mining rights are not being operated, such returns shall be furnished at least once a year.

The lease will include the coal mining rights only, but the lessee may be permitted to purchase whatever available surface rights may be considered necessary for the working of the mine at the rate of $10 an acre.

For full information application should be made to the secretary of the Department of the Interior, Ottawa, or to the Agent or Sub-Agent of Dominion lands.

W. W. CORY.

Deputy Minister of the Interior.

N. B.—Unauthorized publication of this advertisement will not be paid for.

SPIRELLA CORSETS

Mrs. J. H. Davies will be at Mr Mathie's (over tailor shop, Pendoz street between the hours of 2.30 and 5.30 p.m. Saturday of each week to meet ladies wishing to order corsets. P. O. Box 626, Kelowna. 20tf.

Did You Ever Stop to Think?

—of the many changes in methods of business in the last twenty-five years. At that time all spices, candy, peanuts, &c., were sold in cornucopia twisted up by the merchant as he sold the goods. Tea and coffee were all sold in bulk and were wrapped in white tea paper after being weighed in a big brass balance scales.

In everything there are changes innumerable, but in nothing is the change so great as in meats. Why, you know that you can buy nearly any kind of meat put up in cans to-day, and what a God-send on a hot day to be able to get good meat ready to serve instead of having to broil over a hot stove frying a bit of meat for dinner.

Corned Beef, Lunch Beef, Roast Beef, Beef Steak and Onions, Corn Beef Hash, Stewed Kidneys, and Brawn, in one pound tins at *30c* each, and in two pound tins at *55c* each.

Cambridge Sausage, Geneva Sausage, and Jellied Veal, in one and two pound tins at 35c and 65c each.

Besides these we have sliced Smoked Beef, Lunch Tongues, Ox Tongues, Pastes of different kinds for making sandwiches; in fact, practically all kinds of meat you can think of in cans and in glass—The clear thing to take along for camping or for picnicing.

The McKenzie Co.
